2026 TRADERSWORLD FINTECH AWARD

THE CRITERIA

The 2026 TradersWorld FinTech Awards celebrate the exceptional businesses and individuals within the FinTech industry who have been instrumental in driving innovation, developing cutting-edge technologies, and providing traders and investors with the essential tools and insights needed for success. From brokerages opening new global markets to educators shaping the next generation of traders, each recipient of the 2026 TradersWorld FinTech Awards exemplifies an unwavering dedication to excellence, deserving of recognition and praise.

Candidates for the 2026 TradersWorld FinTech Awards undergo a comprehensive selection process. This process evaluates a range of criteria, including online reviews, company track records, notable accomplishments, innovative contributions, affordability, insights from third-party data providers, and their reputation within the industry. This year also marks the introduction of a new category, Best Canadian Brokerage, recognizing excellence in one of North America's most dynamic brokerage markets.

The TradersWorld judging panel, comprised of experts with decades of experience, carefully assesses each nominee across various award categories before selecting the final winners.

If you have a candidate you believe should be considered for a future FinTech Award, please email suggestions@tradersworldawards.com with your recommendation. Be sure to include your reasons for suggesting them, along with any relevant supporting information.

Congratulations to all the 2026 winners!

THE LIFETIME ACHIEVEMENT AWARD

PETER TUCHMAN

Peter Tuchman is being honored with the 2026 TradersWorld Lifetime Achievement Award for a remarkable career that has placed him at the center of Wall Street for more than four decades. Known around the world as the “Einstein of Wall Street,” Tuchman has become one of the most recognizable faces of the New York Stock Exchange, but behind the famous photographs is a veteran trader whose career spans extraordinary changes in market structure, technology and investor participation.

Tuchman began working on the floor of the NYSE in 1985, starting at the bottom of the exchange hierarchy and learning the business firsthand. He progressed from clerical roles to becoming a broker, building a career through the open-outcry era and into today’s highly electronic marketplace. Along the way, he experienced historic episodes including the 1987 crash, the technology boom and bust, the global financial crisis, the pandemic-era market shock and the many periods of volatility that followed.

His longevity is only part of his impact. Tuchman’s animated presence and ability to explain market action in relatable language have made him a frequent financial-media commentator and a bridge between the trading floor and the investing public. In recent years, education has become an increasingly visible part of his work. He is a host of the Wall Street Global Trading Academy and has spoken to newer generations of traders about preparation, discipline, volatility and the importance of learning before risking capital.

Few careers offer such a direct connection between Wall Street’s traditional trading-floor culture and the modern era of global electronic markets. For his durability, his contribution to financial-market culture, and his continuing commitment to educating and engaging traders, Peter Tuchman is a fitting recipient of the 2026 TradersWorld Lifetime Achievement Award.

2026 TradersWorld FinTech Awards
Recognizing Excellence In The FinTech Industry

THE BEST STOCK EDUCATOR

RON HAYDT

Ron Haydt is being honored with the 2026 TradersWorld Award for Best Stocks Educator for his long-standing commitment to making stock-market analysis understandable and actionable for individual traders and investors. As President of both Financhill and Market Tamer, Haydt combines market research, stock-selection tools and education with a teaching philosophy centered on simplifying the decision-making process.

Haydt began his trading career in 2000 and has since taught tens of thousands of traders around the world. Although his background includes both stocks and options, his work consistently returns to a practical question: how can retail investors identify stronger opportunities while controlling risk? His educational material emphasizes straightforward analysis, disciplined portfolio decisions and the use of tools that help traders narrow large universes of stocks into more manageable watchlists.

At Financhill, Haydt's education is supported by quantitative and research-driven resources such as stock scoring, technical snapshots, momentum screens and seasonality research. Audiences at Wealth365 Summits have also seen him teach stock-focused sessions on identifying shares positioned for significant moves. That combination of instruction and analytical tools gives students a way to move from a market idea to a repeatable research process rather than relying solely on opinion.

Haydt's strength as an educator is his ability to reduce complexity without pretending that markets are simple. His focus on practical research, risk management and clear explanations has helped a broad audience become more confident in evaluating stocks for themselves. For his experience, accessibility and continued contribution to retail investor education, Ron Haydt is a deserving recipient of the 2026 TradersWorld Best Stocks Educator Award.

2026 TradersWorld FinTech Awards
Recognizing Excellence In The FinTech Industry

THE BEST FUTURES EDUCATOR

ZIAD JASANI

Ziad Jasani is being honored with the 2026 TradersWorld Award for Best Futures Educator for his ability to combine market structure, macro analysis, technical analysis and disciplined trade execution into education that active traders can apply in real time. As a Market Strategist and Trader Educator with WealthCharts, Jasani has become a familiar instructor to traders seeking a more complete understanding of why markets move and how to respond.

Jasani's approach is broader than a single indicator or setup. He teaches the fundamentals of active investing and portfolio construction while combining global macro analytics with fundamental and technical analysis. That multi-layered perspective is especially relevant to futures traders, who routinely operate in markets influenced by interest rates, currencies, commodities, economic data and shifts in risk sentiment.

His teaching is grounded in live market work. Jasani has led day and swing trading education, presented futures-oriented strategies at Wealth365 events, and has built a reputation for explaining not just what he sees on a chart, but how the pieces fit together. Students can watch and learn from Jasani live every day on the WealthCharts platform as he does futures prop trading, and they are encouraged to understand context, define risk and develop independence rather than simply copy trades. His more than 20 years of small-business and senior corporate management experience also contributes a practical, process-oriented perspective to his instruction.

Futures markets reward preparation, adaptability and disciplined execution. Jasani's ability to connect macro context with technical opportunity helps students build those skills in a structured way. For his depth of market knowledge, practical teaching style and sustained commitment to helping active traders improve, Ziad Jasani is a deserving recipient of the 2026 TradersWorld Best Futures Educator Award.

2026 TradersWorld FinTech Awards
Recognizing Excellence In The FinTech Industry

THE BEST OPTIONS EDUCATOR

LAURIE JONES

Laurie Jones is being recognized with the 2026 TradersWorld Award for Best Options Educator for combining nearly three decades of market experience with a disciplined, highly practical approach to teaching active traders. As Director of the Options & Stocks Room at Become A Better Trader, Jones works directly with traders in a live educational environment where market analysis must translate into clear decisions and well-defined risk.

Jones brings an engineering background to his market work, and that analytical mind set is evident in the way he processes data and structures trade ideas. Rather than overwhelming students with unnecessary complexity, he focuses on distilling market information into actionable, higher-probability opportunities. That approach is particularly valuable in options, where traders must consider not only direction but also time, volatility, strike selection and position structure.

His educational work extends beyond simply presenting trade ideas. Jones has coached active traders online and regularly teaches through live market sessions within the Become A Better Trader Options & Stocks Room as well as financial education events such as the Wealth365 Summit. His presentations have included options-focused strategies designed around current market conditions, giving students the opportunity to see how an experienced trader evaluates setups in real time. The emphasis is on understanding the reasoning behind the trade, not merely following an alert.

Options education is most useful when it connects technical knowledge with discipline, risk awareness and repeatable decision-making. Laurie Jones brings those elements together with an approachable teaching style and years of hands-on experience. For his ability to turn complex market information into practical options education, Laurie Jones earns the 2026 TradersWorld Best Options Educator Award.

THE BEST UP & COMING EDUCATOR

JAVI "THE MAESTRO" CARBAJALES

Javi "The Maestro" Carbajales is being recognized as the 2026 TradersWorld Best Up and Coming Educator for bringing an energetic, precision-focused approach to short-term trading education. Working with Max Options Trading, Carbajales has begun to build a distinctive teaching identity around practical setups that are designed to help traders read price action without burying the chart under unnecessary complexity.

A strong example is his Quantum Shift strategy. The method blends a mixture of momentum and key short term market levels to identify higher-probability intraday setups. The framework reflects a central theme in Carbajales' teaching: use a focused set of inputs, understand what they are signaling, and make decisions with speed and precision when conditions align.

That action-oriented style is well suited to traders who want to understand how a setup develops in the live market. Rather than presenting trading as a collection of abstract concepts, Carbajales emphasizes the relationship between price, volume and nearby market structure. His growing presence at major online education events such as Wealth365 gives him a platform to introduce these ideas to a wider audience of day traders, options traders, and prop traders.

Just as important as his strategies is the way Javi connects with the traders he coaches. Through one-on-one coaching calls, live sessions, and appearances on the Traders and Haters podcast, where he has discussed the mindset and discipline required to trade at a high frequency without blowing up an account, he has earned praise from students for being both an effective coach and a genuinely supportive mentor.

The Best Up and Coming Educator category recognizes emerging voices whose teaching is gaining traction and whose methods bring a fresh perspective to the trading community. With a memorable teaching persona, a clearly defined methodology and an emphasis on practical execution, Javi "The Maestro" Carbajales represents exactly that kind of emerging educator and is a deserving recipient of the 2026 TradersWorld Award.

THE BEST
EQUITY
FUNDING
PLATFORM

AngelList

ANGELLIST

AngelList is being recognized with the 2026 TradersWorld Award for Best Equity Funding Platform for the infrastructure it provides to venture fund managers, startup investors and the broader private-market ecosystem. Over time, AngelList has evolved from a network connecting startups and investors into a technology and fund-administration platform supporting multiple ways to form, raise and manage venture investment vehicles.

One of AngelList's most notable innovations has been the Rolling Fund structure. Rolling Funds allow managers to accept capital through recurring quarterly subscriptions rather than relying exclusively on a single, traditional multi-year fundraising cycle. For limited partners, the structure can provide more flexibility in adjusting future commitments; for fund managers, it can create a more continuous fundraising process that allows greater focus on sourcing and deploying capital.

AngelList also supports special purpose vehicles and traditional venture funds, with services spanning fund formation, administration, banking and wiring, accounting and taxes, investor closing, LP portals and valuation support. The platform states that it supports tens of thousands of funds and syndicates and more than \$17 billion in assets on platform, demonstrating the scale that its infrastructure has achieved within private-market investing.

Private-market investing remains complex, regulated and inherently risky, but modern infrastructure can make the administrative side of venture investing more efficient for qualified participants. By combining technology, fund operations and flexible investment-vehicle structures in one ecosystem, AngelList has played an important role in modernizing how venture capital is organized and administered. That continued innovation makes AngelList a deserving recipient of the 2026 TradersWorld Best Equity Funding Platform Award.

2026 TradersWorld FinTech Awards
Recognizing Excellence In The FinTech Industry

THE BEST TRADING PLATFORM

WEALTHCHARTS

WEALTHCHARTS

WealthCharts is being recognized with the 2026 TradersWorld Award for Best Trading Platform for continuing to expand beyond charting into a broad trading, research and performance ecosystem. The platform brings together charts, scanners, options and futures tools, AI-powered research, indicator development, backtesting, performance analytics, as well as live broker and prop futures connectivity in an environment designed for active traders.

A major strength of WealthCharts is its speed and innovative development. From the depth of its trade-finding and analytical toolkits such as WealthScanner which combines technical, fundamental and market-research inputs to rank potential trade ideas, WealthCharts helps shorten the path from market research to a focused watchlist. The platform also includes more than 200 indicators, drawing tools, numerous proprietary scanners, options-flow and institutional-data tools, seasonality research, indicator development tools, and more. Between 8-10 new features being released every month, WealthCharts is constantly developing new ways to help traders engage with the ever-changing markets.

WealthCharts has also continued to strengthen direct trading and account connectivity. Its broker and prop-firm integrations allow users to execute from charts, panels, and more while using advanced order types across multiple connected accounts including cross prop-firm with OmniProp Technology eliminating the reliance on separate middleware. WealthCharts also supports enhanced risk management tools for prop traders including the brand new 'Tilt Detector' which helps identify tilt-related trading behavior in real time. WealthTracker adds personal performance analytics, while WealthTracker Pro extends the concept into real-time peer benchmarking and trader-sentiment analysis.

The result is a platform that increasingly connects the full trading workflow: finding an opportunity, analyzing it, executing the trade, managing risk and reviewing performance afterward. That integrated approach, combined with continued investment in proprietary tools and trader education, makes WealthCharts a deserving recipient of the 2026 TradersWorld Best Trading Platform Award.

2026 TradersWorld FinTech Awards
Recognizing Excellence In The FinTech Industry

THE BEST MULTI-ASSET INTERNATIONAL BROKER

INTERACTIVE BROKER

Interactive Brokers is being recognized as the 2026 TradersWorld Best Multi-Asset International Broker for combining broad global market access with professional-grade trading technology and a unified account structure. For active traders and investors who operate across borders and asset classes, the ability to access numerous markets without maintaining a collection of disconnected brokerage relationships can be a major advantage.

Interactive Brokers reports that clients in more than 200 countries and territories can trade stocks, options, futures, currencies, bonds, funds and other products on approximately 160 global markets from a single platform. The firm also supports account funding and trading in as many as 28 currencies, giving international clients considerable flexibility when managing global portfolios and currency exposure.

The breadth of the product offering is matched by an infrastructure built for sophisticated execution and portfolio management. Interactive Brokers has continued to add exchange access and expand its international footprint, while maintaining tools for active traders, professional investors and institutions. Its global reach allows users to move from U.S. equities to international shares, derivatives, fixed income and currencies without leaving the broader IBKR ecosystem.

Interactive Brokers has been a repeat recipient in this category because the core proposition remains compelling: extensive market access, multiple asset classes and robust technology under one brokerage relationship. As investors increasingly look beyond their home markets for diversification and opportunity, that combination remains especially valuable. For its scale, global connectivity and continuing expansion, Interactive Brokers earns the 2026 TradersWorld Award for Best Multi-Asset International Broker.

THE BEST OPTIONS TRADING BROKERAGE

TASTYTRADE

tastytrade has earned the award for Best Options Trading Brokerage for the third consecutive year, extending a winning tradition that dates back to its 2022 victory under its former name, tastyworks. Built by traders for traders, and now part of the global IG Group, tastytrade has become synonymous with options trading thanks to its combination of powerful technology, transparent pricing, and a deep commitment to trader education.

Pricing remains one of tastytrade's most compelling advantages. Stock and ETF trades are commission-free, equity options cost just \$1 per contract to open with a cap of \$10 per leg, and closing trades are free. Futures, micro futures, and futures options are also competitively priced, and there is no account minimum to get started. This straightforward, trader-friendly fee structure allows active options traders to manage multi-leg strategies and adjust positions without worrying that commissions will erode their results.

tastytrade's platform continues to set the standard for options traders. Available on desktop, web, and mobile, it offers more than 300 technical indicators, built-in backtesting, and analysis tools designed specifically for options strategies. In 2026 the firm added several significant capabilities, including CFTC-regulated prediction markets that let traders act on economic data releases, central bank decisions, and other market events, as well as overnight Global Trading Hours for SPX, VIX, XSP, and RUT index options. When the Pattern Day Trader rule ended in June 2026, tastytrade was ready on day one with new intraday margin treatment for its customers.

The broader industry has taken notice. In 2026 tastytrade was named Best Overall Options Trading Platform by Investopedia and the top broker for options trading by StockBrokers.com for the second straight year. Paired with the education provided by its sister network, tastylive, which delivers live shows and in-depth content on options strategies, tastytrade equips traders with both the tools and the knowledge to succeed. For its low costs, cutting-edge platform, and dedication to options traders, tastytrade is a well-deserving winner of the 2026 award for Best Options Trading Brokerage.

2026 TradersWorld FinTech Awards
Recognizing Excellence In The FinTech Industry

**THE BEST
STOCK
TRADING
BROKERAGE**

Webull

WEBULL

Webull is being recognized with the 2026 TradersWorld Award for Best Stock Trading Brokerage for delivering a technology-driven brokerage experience that combines low-cost stock trading with advanced research and execution tools. Its mobile, desktop and web platforms are designed to serve self-directed investors who want an accessible interface without giving up the charting, market data and order-entry capabilities associated with more active trading.

Webull offers commission-free trading in stocks and ETFs, with regulatory or other applicable fees still possible, and provides access to U.S. exchange-listed stocks, fractional shares, ADRs and other securities. The platform's stock-trading experience is supported by advanced charting, technical indicators, pattern-recognition tools and detailed market quotes, including Level 2 data options for traders who want greater visibility into market activity.

Extended-hours access is another important feature for active stock traders. Webull supports pre-market trading beginning at 4:00 a.m. Eastern and after-hours trading through 8:00 p.m. Eastern, allowing users to respond to earnings releases and other market-moving news outside the regular session. Paper trading, screeners and community features give newer traders ways to practice, research and exchange ideas before committing capital.

Webull's appeal lies in bringing many professional-style tools into a brokerage experience built for everyday self-directed investors. Its combination of commission-free stock trading, cross-device access, extended hours, research tools and a modern interface continues to make it a strong destination for active equity traders. For these reasons, Webull earns the 2026 TradersWorld Best Stock Trading Brokerage Award.

2026 TradersWorld FinTech Awards
Recognizing Excellence In The FinTech Industry

THE BEST CANADIAN BROKER

QUESTRADE

Questrade is being recognized as the 2026 TradersWorld Best Canadian Brokerage for a combination of competitive pricing, broad self-directed investing capabilities and features designed specifically for Canadian investors. The firm has continued to reduce the friction associated with managing portfolios across Canadian and U.S. markets while supporting the registered accounts that are central to many Canadians' financial plans.

One of Questrade's most significant recent developments is zero-commission online trading for Canadian- and U.S.-listed stocks and ETFs. The brokerage also offers options trading with no ticket charge and contract-based pricing, while self-directed accounts have no minimum balance requirement. For investors who trade frequently or build portfolios over time, lower transaction costs can make it easier to put more capital to work.

Questrade also addresses a uniquely Canadian challenge: managing investments in both Canadian and U.S. dollars. Dual-currency accounts allow clients to hold CAD and USD in the same account, helping investors manage currency conversion more deliberately. The firm supports common registered and non-registered account types, including TFSA, RRSP, FHSA, RESP and RRIF accounts, and provides real-time market data and a growing collection of trading and investing tools.

The strongest Canadian brokerages must do more than provide market access; they need to reflect the tax structures, currencies and investing habits of Canadian clients. Questrade's combination of commission-free stock and ETF trading, flexible account choices, dual-currency functionality and accessible self-directed investing makes it a strong fit for that role and a deserving recipient of the 2026 TradersWorld Best Canadian Brokerage Award.

2026 TradersWorld FinTech Awards
Recognizing Excellence In The FinTech Industry

THE BEST PROP TRADING FIRM

TOP ONE FUTURES

Top One Futures is being recognized with the 2026 TradersWorld Award for Best Prop Trading Firm for an approach built around giving futures traders multiple paths to demonstrate skill, access funded accounts, and progress toward live trading. In a prop-trading landscape where rules can vary dramatically from one program to another, Top One Futures has developed a lineup intended to accommodate different trading styles rather than forcing every trader into the same structure.

The firm currently offers several evaluation and funded-account pathways, including Elite, Elite Access and Elite Daily programs. Their rules differ in areas such as daily loss limits, consistency requirements, activation fees and payout schedules, allowing traders to select a framework that better matches the way they trade. Top One Futures also supports both simulated-funded and live-account progression, creating a defined path from evaluation to funded participation. Traders can connect through popular platforms including WealthCharts (new), Tradovate, NinjaTrader, TradingView, and BlackArrow and the firm's active Discord community gives members a place to share ideas and get quick help.

Payout flexibility is another important part of the offering. Certain funded programs allow daily or on-demand payout requests when eligibility requirements are met, and published program terms include a 90% trader / 10% firm profit split on several account types. The company processes standard payouts through Rise and provides detailed public help-center documentation explaining payout requirements, account rules and program differences.

What ultimately distinguishes Top One Futures is the combination of choice, transparency and an infrastructure designed specifically for active futures traders. By giving traders multiple account models, clearly documented rules and a route toward live capital, Top One Futures has built a prop experience focused on progression and practical usability. Those qualities make it a deserving recipient of the 2026 TradersWorld Best Prop Trading Firm Award.

2026 TradersWorld FinTech Awards
Recognizing Excellence In The FinTech Industry

THE BEST FINANCIAL CONFERENCE

WEALTH365 SUMMIT

The Wealth365 Summit has once again been named the Best Financial Conference, earning the honor for the third consecutive year. Billed as the largest free online trading and investment conference in the world, the six-day event is held multiple times each year and continues to set the standard for accessible, high-quality financial education. Its July 2026 edition drew more than 50,000 registrations and featured more than 60 speakers and sponsors, a scale that few in-person conferences can match.

The breadth of content is a major reason for the Summit's success. Attendees can learn from nationally recognized experts, many of whom have appeared on CNBC, Bloomberg, Forbes, and The Wall Street Journal, across a wide range of topics including stocks, options, futures, forex, cryptocurrency, real estate, financial and tax planning, and entrepreneurship. The 2026 events reflected the latest trends in the markets, with sessions on prop trading, order flow, trading psychology, energy markets, geopolitics, and the growing role of artificial intelligence in trading.

What truly distinguishes the Wealth365 Summit is its combination of accessibility and interactivity. Because the event is entirely virtual and free to attend, traders and investors can participate from anywhere in the world without the cost of flights, hotels, or registration fees. Signature features such as the daily "Chat With the Champion: After Hours with Rob Hoffman" and the new real-time futures simulated trading competition spanning all week with live strategy reviews give attendees the opportunity to watch experts apply their methods in real time, while more than \$250,000 in prizes adds excitement throughout the week.

Above all, the Wealth365 Summit remains focused on delivering practical, actionable insights. Rather than dwelling on abstract theory, its speakers share strategies attendees can put to work immediately. The Summit continues to evolve, introducing new Expert Events for its October 2026 edition. Whether attendees are just starting out or looking to refine a proven approach, the Wealth365 Summit provides the guidance and resources they need, making it a deserving recipient of the 2026 award for Best Financial Conference.

THE BEST NEW INNOVATIVE TECHNOLOGY

OMNIPROP

OmniProp is being recognized with the 2026 TradersWorld Award for Best New Innovative Trading Technology for addressing one of the fastest-growing challenges in futures prop trading: managing trades across multiple evaluation and funded accounts without relying on a patchwork of separate trade copiers, risk tools and account windows. Built directly into WealthCharts, OmniProp is designed to make multi-account prop trading feel like one connected workflow.

At its core, OmniProp allows a trader to place a trade once and copy that execution across multiple connected prop-firm accounts. WealthCharts describes the system as a native multi-firm connector which seamlessly integrates with the existing built-in copier all while providing lightning fast execution and ultra-tight fills. The WealthCharts Trade Copier was built to reduce the latency and slippage concerns that can arise when traders are routed through third-party copier software, which OmniProp Technology takes to the next level supporting both evaluation and funded accounts, as well as supporting copying advanced trade management strategies such as simple and multi-brackets alongside stop management settings.

The innovation goes beyond copying orders. OmniProp works alongside WealthCharts' prop-trading risk suite, including per-account risk controls, liquidation lines and automatic pause functionality. This matters because prop traders often manage accounts with different balances, drawdown thresholds and firm-specific rules. Bringing execution and account-level risk information together can reduce operational complexity at precisely the moment when speed and discipline matter most.

Prop trading has grown into an ecosystem where successful traders may operate several accounts across multiple firms simultaneously. OmniProp responds directly to that reality by treating multi-account management as a native platform function for free rather than an external add-on. For its integrated approach to execution, scaling and risk control across prop accounts, OmniProp is a deserving recipient of the 2026 TradersWorld Best New Innovative Trading Technology Award.

THE UNIVERSAL GOLDEN KEYS SERIES - Vols. 1-3

BY
ALEXANDER STRAKER

Vol. 1. - PENDULUM MOTION: THE HARMONY OF THE CIRCLE

Pendulum Motion presents forecasting techniques built on a new principle, **Circular Scaling**, which has never been presented before Straker's work. It uses an **ingenious method of charting via time-by-degrees** to plot the market according to the parameters of a **circular scale using rotational mechanics**. ONLY by charting with **Circular Scaling is the Key to accessing Pendulum Motion discovered!** This is a **breakthrough discovery** of its own, NOT part of traditional Gann analysis. These are completely new and original ideas developed by the author, and never before seen in the markets. Alex proves their power, see [his trading records at this link!](#)

Software Tools for **PENDULUM MOTION** available for Wave59, Optuma & TradingView! Straker used these tools to generate **1318% in 1 DAY** and **12,000% in 1 WEEK smashing ALL of Gann's records!** He traded an initial \$1000 up to \$120,000 in 1 WEEK trading CFD's with 500:1 Leverage! [Full PROOF posted at this link!](#)

Vol 2. - GOLDEN SPEED: THE GEOMETRY OF THE SQUARE

The most **esoteric and critical secret to Gann's work** is the proper use of chart scaling, often called or "squaring" a chart. If not done correctly, Gann's REAL work is never seen! It's a tiny tweak few understand but is key to tools working! Straker is the first have solved Gann's system of "Square Scaling," without which Gann's tools just NEVER work right...

This was Gann's solution to embedding natural vibration into the structure of his charts. The secret of scaling is THE most important key to using charts and improves the function of all Gann's tools! The secret is the Golden Mean and the Speed of Light plotted on the Torus of Space/Time! Charts are representations of Natural Forces mapped upon the Cosmos! **THE GOLDEN MEAN IS SECRET KEY TO GANN! - NOBODY HAS EXPLAINED ANY OF THIS BEFORE!**

Vol 3. MUSIC OF THE SPHERES PART 1

THE SYNCHRONICITY OF NUMBERS & MIDAS DREAM ASTRO-TRADING SYSTEM

A NONDISCRETIONARY ASTRO-TRADING SYSTEM

The closest anyone's come to an "Idiot Proof" System!

- ◆ **THE Most Cutting-Edge Astro-Trading Technology Available!**
- ◆ **Monumental Leap** forward in Astro-Trading Theory & Application.
- ◆ Closer to **Gann's Astro-Trading Methodology** than anything yet!
- ◆ Makes Astro **Learning Process into a clear and manageable pathway** that can be learned and applied by **anyone**.
- ◆ **Can be learned in a matter of days for a professional trader and just weeks for a beginner.**
- ◆ **NO prior Astronomical or Astrological knowledge** required to apply this system! Not "Horoscope Astro" - **Celestial Mechanics!**
- ◆ **90% Non-Discretionary Trading System with a Built-In Risk Management System.** Only 2 "subjective" chart setup decisions.
- ◆ Works in **any market** and on **any time frame**.
- ◆ **Requires Minimal Initial Capital**, as shown by the Miser's Dream Trading Records to the right. **Straker ran \$302 to \$22,555 in 8 days!**

PART 1 OF EXTENDED 4-PART SERIES - ALL AVAILABLE!

NEW INTRODUCTORY & INTERMEDIATE COURSES

THE ROYAL ROAD TO MAKING THE TURN

FROM UNSUCCESSFUL TO SUCCESSFUL

- IF YOU DO NOT MAKE CONSISTENT PROFITS IN YOUR TRADING, THEN THIS IS THE PLACE TO START! THE BEST SOLUTION FOR NEW TRADERS!

-FOR STRUGGLING OR BEGINNER TRADERS WHO HAVE NOT BECOME CONSISTENTLY PROFITABLE.

- HOW TO FINALLY "MAKE THE TURN" FROM UNSUCCESSFUL TO SUCCESSFUL TRADER.

THE ROYAL ROAD TO MARKET MASTERY

Squaring Time and Price

How W.D. Gann Used Square Numbers to Time Market Turns

By Alexander Straker

"Mathematical law governs all market movements," W.D. Gann famously asserted. Central to his legendary forecasting methodology was the belief that financial markets do not move at random but rather vibrate according to fixed geometrical and mathematical ratios. Among the most powerful tools in Gann's analytical arsenal was the application of **natural square numbers** (1, 4, 9, 16, 25, 36, 49, 64, 81, 100, 121, 144, 169, 225, 256, 361, ...) to time market reversals.

For Gann, a square number represented structural completion and harmonic equilibrium. When a market moves a distance in time or price that equals the square of a natural integer, the underlying vibration reaches a state of balance. If time and price square simultaneously, a major trend change is more likely.

The Philosophy Behind Gann's Major Square Counts

Gann observed that natural numbers squared create specific mathematical energy centers in time. While modern traders often focus strictly on calendar dates or moving averages, Gann counted time intervals—in days, weeks, and months—directly from significant market pivots (extreme highs and major panic lows).

Key natural squares held specific symbolic and cyclical meanings in Gann's work:

- **49 (7×7):** Known as the "Fatal Number" or the Square of 7. It frequently marks sudden trend exhaustion or sharp reaction turns.
- **64 (8×8):** A major structural square, representing 1/4 of 256 and a critical harmonic division of the circle.
- **81 (9×9):** The Square of 9 base cycle, representing a complete square of single-digit base numbers.

- **144 (12×12):** Gann's "Master Square." Because 12 represents the division of the circle/zodiac, 144 is a fundamental constant in time cycles (144 days, weeks, or months).
- **225 (15×15) & 361 (19×19):** Macro square periods, with 361 aligning almost precisely with the 365-day solar year.

To utilize these numbers effectively, Gann measured time forward from major pivots across three primary timeframes: daily, weekly, and monthly.

1. Daily Timeframe: Precision Reversals in May Wheat

On daily charts, square numbers measure short- to intermediate-term momentum cycles. Gann used daily counts to pinpoint exact calendar-day windows where a move would run out of energy.

Market Example: Chicago Wheat (May Contract)

Consider a scenario in the grain markets—an asset class Gann traded extensively. Following an aggressive panic liquidation, May Wheat forms an extreme bear-market low at a price of 90 cents.

1. **The 49-Day Count (7×7):** Counting 49 calendar days forward from the extreme low, the market frequently experiences its first major counter-trend test or intermediate top. If prices rally into day 48–50, traders should look for a reversal pattern (such as a top indicator or a sharp daily key reversal).
2. **The 81-Day Count (9×9):** If the trend continues past the 49-day mark, the next critical square window opens at 81 calendar days from the origin low.
3. **Squaring Price with Time on the Daily:** If May Wheat rallies exactly 81 cents off its low to reach 171 cents at the exact 81-day mark from the low, **Price has Squared Time** (81 points in 81 days). Gann considered this a top-tier signal to exit long positions and prepare for an aggressive short trade.

Does this still work in today's market?
Here are some time squares on Wheat Daily:

Next with Price range squares added below:

2. Weekly Timeframe: Intermediate Cycle Turns in U.S. Steel

Weekly timeframes filter out daily noise and reveal the true structural vibration of institutional money flow. Gann paid close attention to weekly counts, particularly when tracking high-volume industrial stocks like **U.S. Steel (X)** or the **Dow Jones Industrial Average**.

Market Example: U.S. Steel

1. **The 64-Week Cycle (8×8):** From a major multi-year low, U.S. Steel begins a powerful bull campaign. Gann would run a weekly bar count from the week of the absolute low. As the trend approaches week 64 (roughly 15 months), the probability of a secondary top or deep corrective wave rises significantly.
2. **The Master 144-Week Cycle (12×12):** 144 weeks equates to approximately 2.76 years (33 months). In Gann's cycles the 3-year zone (or 144 weeks) is one of the strongest turning points in stock market history.
3. **Execution:** If U.S. Steel advances for 144 weeks from a major bear bottom and reaches a major mathematical resistance level (such as a prior historic peak or a 144-point advance from the low), the weekly square is complete. Gann would look for a weekly closing key reversal to confirm an intermediate or major trend shift.

Weekly time counts on US Steel:

3. Monthly Timeframe: Macro Trends in Cotton & Soybeans

For long-term position trading and commercial hedging, Gann turned to monthly charts. Monthly square counts forecast multi-year economic waves, secular bull markets, and major commodity tops.

Market Example: Cash Cotton or Soybeans

In soft commodities, agricultural growing seasons and long-term supply/demand shocks strictly adhere to master time squares.

1. **The 81-Month Cycle ($9 \times 9 = 6.75$ Years):** Counting 81 months forward from a major generational commodity bottom (e.g., a multi-year low in Soybeans), the market approaches a critical long-term harmonic window. An 81-month cycle often marks the ultimate bull market peak or the final capitulation low of a secular bear trend.
2. **The 144-Month Master Cycle ($12 \times 12 = 12$ Years):** The 12-year cycle is a cornerstone of Gann's macro-forecasting theory. A 144-month period completes a full square of the duodecimal system (12). Commodity

markets that have been trending upward for 144 months consistently undergo structural shifts, often entering major multi-year bear markets.

Monthly time counts on Soybeans:

Timeframe	Main Square Numbers	Primary Application
Daily	49, 64, 81, 121, 144	Timing short-term swings, day/swing trade exit points
Weekly	49, 64, 100, 144	Identifying intermediate trend exhaustion & swing turns
Monthly	81, 121, 144, 225	Forecasting major macro bottoms, tops, and multi-year shifts

Practical Rules for Modern Gann Square Trading

These simple, yet valuable time counts are clearly worth keeping track of even in modern markets. To apply Gann's square number theory in current markets, keep these core rules in mind:

1. **Identify Uncontested Pivots:** Always begin your square counts from absolute historical highs or major panic lows where volume and price volatility peaked.
2. **Allow a Small Orb of Influence:** Time cycles are rarely precise to the exact minute or hour. Allow an "orb" of 1 to 2 daily bars on daily counts, or 1 weekly bar on weekly counts.
3. **Look for Confluence:** A time square of 81 days is valuable on its own, but its predictive power triples if it coincides with a 50% retracement level, a 1x1 Gann Angle, or a Price Square (81 points or 81 dollars off the low).
4. **Calendar Days vs. Trading Days:** Gann preferred calendar day counts (365 days per year) for long-term cycle forecasting because they align with planetary geometry, but he also tracked trading days (252 days per year) for short-term swing timing. Monitor both to identify overlapping clusters.

By integrating natural square counts into daily, weekly, and monthly charts, traders gain a distinct structural edge—allowing them to anticipate market turn windows long before conventional indicators register a signal.

Finally, another approach worth testing may be to substitute a different kind of time system for the traditional calendar, for example a planetary cycle. Calendar Days are very similar to Solar degrees for example, so this is one possible reason why Gann advocated for use of calendar days in time counts. To discover more about the way to identify active cycles and squaring price with time in any market...

George Bayer's Critical Degrees

Planetary Transits of Critical Zodiac Degrees as Markers of Trend Change

By Eric Penicka

Who Was George Bayer?

George Bayer was one of the great market analysts of the 20th century. He was a serious student of esoteric concepts and thrived on decoding ancient and classic texts. His depth of research for the time period in which he lived is truly amazing. His use of astronomical principles was certainly unique.

His work deserves the same attention as that of W. D. Gann. Gann carries a larger legend and mystique than Bayer, but Bayer's work is just as valid. In some ways it is also easier to decode.

George had the habit of giving you some information in one book and then picking it up and giving you some more of the concept in another.

Critical Degrees

One of his favorite concepts was the use of locating "critical degrees" in the zodiac. As planets transit these degrees, George would anticipate a change of trend. He had various critical degrees that he used.

There is one interesting set he left for us that crossed over between his *Time Factors in the Stock Market* and *George Wollsten* books.

This is also the one set of critical degrees George left us that can also be used as time counts, angles, price levels, and price ranges. In this article, we will only be looking at how the market reacted to planets, or combinations of planets crossing these degrees.

The Indicator

An indicator was created to make the work easy. It contains all the planets, plus the moon, and options to check geocentric, heliocentric, and sidereal zodiac degrees. In the first chart below, the Sun, Mercury, Venus, Earth, and Mars are shown. The Earth and Sun are redundant in this case. This is the Wheat market, one of George's favorites.

Geocentric Examples: Wheat

From the geocentric perspective (Figure 1), the Sun, Mercury, Venus, and Mars are tightly clustered.

The hit is 3 days off the exact low, which happens. Other times it is exact. A significant trend change occurred with a move up and two failed tests of the initial low before the market took off.

The next chart (Figure 2) shows a similar cluster, this time at a market high.

Figure 1. *Wheat — geocentric cluster at a market low*

Figure 2. *Similar cluster at a market high*

Heliocentric Mars

In the next chart (Figure 3), heliocentric Mars is shown. Mars normally has a powerful effect on many markets and is always worth checking. 7 consecutive examples of Mars hits are shown below.

Figure 3. *Consecutive Heliocentric Mars Hits*

Sidereal Zodiac: ES

The next three charts are all of the sidereal zodiac on ES charts. In the first (Figure 4a), Mercury, Mars, Jupiter, Saturn, and Uranus are involved in the cluster. The low comes in right with Saturn (brown dot), with Uranus exiting, and Venus, Mars, and Jupiter incoming.

The low on the next chart(Figure 4b) is in a cluster of Saturn, Uranus, and Neptune.

The final chart (Figure 4c) has Mercury, Mars, Jupiter, and Saturn at the low. Uranus is right there as well.

Figure 4a. Low with Saturn; Uranus exiting, Venus, Mars and Jupiter incoming

Figure 4b. Low in a Saturn, Uranus and Neptune cluster

Figure 4c. Mercury, Mars, Jupiter and Saturn (plus Uranus) at the low

Where to Look Next

George left a good clue to find these degrees in the *Time Factors* book. He used the phrase *Time, Times, and half a time* where he explained an important part of the concept. The “proof” was in the *George Wollsten* book.

For more information about my research or my two books: *Gann Science* and *The Perfect Storm*, please see my author page on *CosmoEconomics* here:

THE PERFECT STORM

USING VEDIC ASTROLOGY TO PROJECT AN INTRADAY
TIME MAP OF MARKET ACTION IN THE S&P 500

BY ERIC PENICKA & KEN ADKINS
FINDS THE 2 BIGGEST TRADES EVERY DAY!

We are very excited to release *The Perfect Storm* by Eric Penicka and Ken Adkins. This course uses **Vedic Astrology to project a time map of market action in the S&P500 on an Intraday Basis**. The course and accompanying software **will automatically identify Key Swing Zones in the market for each day**. These zones define the energy behind the market, **providing traders with the required time windows to capture the 2 strongest daily moves, up and down**. It also gives the dozen highest-prob. intraday turns every day.

This work originated in a deep study of Vedic techniques applied to horse racing prediction, as presented in *The Clairvoyant's Window*. Penicka and Adkins then reapplied the results of that predictive work to the financial markets with excellent results in predicting intraday trends and turning points.

Intraday timing is always the hardest to predict due to the amount of short term "noise", and this is THE BEST short term timing system that we have seen. This course is focused upon the S&P Index, but that is not the only market the astro-tools will work on. These **Key Swing Zones are consistent across all markets**, so the techniques can be similarly applied to other markets, and samples in Euro, Gold, Oil, Soybeans are shown [at this link](#). [Analysis & results of 9 months of trading on author's YouTube here!](#)

THE CLAIRVOYANT'S WINDOW - AN ASTROLOGER'S KEY TO HORSE RACING

Penicka's long term love of **astrology and horse racing** dating as far back as the early 1980's became the focus of his 2nd work. This highly original course of over **750 pages** is a **textbook of astrological techniques** which can be applied to multiple entry contests but specifically to horse racing prediction.

This compilation is the result of much research and data accumulation, testing, and finding the more important astrological and numerical factors that will help identify the top finishers in horse and dog racing events. This information is good to use on any pari-mutuel event, or any multi-contestant event the reader may be interested in. ...**methods are astrological in nature, both western, and Vedic.**

An intermediate level of understanding of astrological concepts and terminology are required as a base to understand the material. Number and time cycles are also used and explored and have a power of their own. Every known modern and ancient system of astrological prediction of such events has been studied and compiled in this Magnum Opus of racing prediction wisdom. **Like trading, the mastery of racing prediction can provide a lucrative career for an interested researcher!**

Includes Advanced Software with ALL Horses, Tracks & Horoscopes already entered and working...

GANN SCIENCE - The Periodic Table & The Law of Vibration

Penicka's Gann Science provides a viable solution to the Law of Vibration as Gann originally presented it in his interview with Richard Wyckoff in *The Ticker and Investment Digest*, in 1909. The author takes Gann's exact words and correlates them with the cutting edge science of Gann's day to demonstrate what Gann meant when he said, **"stocks are like atoms"**. He develops a system which identifies the key "mathematical points of force" that govern the structure behind the market.

The author builds a solid foundation in the Natural Sciences of Gann's day, showing how the emerging science of the **Periodic Table of Atomic Elements provides a system of order based upon the vibrational values of the elements** themselves. When the elemental structure is determined for an individual market, a **Master Number Set** will be defined for that market which determines its movement in price and time forever into the future.

A New Understanding of W. D. Gann's Visionary Harmonic Science

THE HARMONIC TRADER

UNLOCKING THE SECRETS OF GANN'S LAW OF VIBRATION

BY JOHANNES SUNDBERG

A NEW BREAKTHROUGH IN MAPPING W.D. GANN'S PLANETARY GEOMETRY & SQUARING PRICE WITH TIME

309 PAGES, ONLINE AUTHOR FORUM

[SEE SUNDBERG'S AUTHOR PAGE HERE!](#)

THE SECRET SCIENCE OF SQUARING

GANN'S LOST SYSTEM OF ASTRO-FORECASTING

Sundberg's **Book 1** reveals some of Gann's best hidden secrets, in particular, *how to Square Price and Time in the proper way!* It strives to build a solid base for interpreting Gann by showing step by step how the cosmological forces are translated into market prices every day.

Since the paths of the astronomical forces are known and can be calculated ages in advance, so can we forecast the future just like the astronomer does. This book presents a unique methodology showing how to puzzle together the different pieces that Gann left behind into to a workable trading methodology. Through this rethinking of the use of astro-geometry, we can generate superb trade set-ups with low risk and extremely attractive returns

Mapping Celestial Mechanics onto a Chart!

Johannes Sundberg is a 25-year professional trader and portfolio manager who rediscovered Gann's method of astro-geometric price/time modelling, and developed precise applications to project Gann's planetary geometry straight onto a market chart, providing a map which relates astronomical motion with the mathematics and geometry the squaring of price and time.

The market geometry itself is determined by Planetary Time thus defining squares and force of by the angular geometry. As such, tools like Gann's "geometrical angles", if produced correctly, will be planetary based and will perfectly adhere to the market action with great precision with no scale squaring.

- [Forecast & Trading Records for 2021](#)
- [Forecast & Trading Records for 2022](#)
- [Forecast & Trading Records for 2024](#)

Sundberg's **Book 2** on Harmonic Trading reveals a **new breakthrough in Gann's system of musical harmonics** which defines the harmonic growth structure behind the market by the Law of Vibration. When the planetary angles (from Book 1) interact with the **proper 'planetarily tuned' harmonic grid**, an endless series of powerful trading signals are generated allowing for endless high-probability trades to be taken with tight risk management determined by the precise harmonic variables.

Gann's harmonic system **DOES NOT WORK** unless you know how to set the **Keynote** of the market, determine the **planet ruler** of each trend, and set the **proper tuning and scale** on each swing. When done, markets turn at every octave boundary and bounce off of every line like magic!

Once this base harmonic system is understood, a series of variant methods of generating "diagonal angles" according to Gann theory are developed, each which identifies multiple sequences of turning points in any market on any timeframe. **Sundberg has rediscovered what Gann was REALLY doing with his Master Chart Overlays for the 1st time!**
500 PAGE BOOK - AUTOMATED TOOLS - ONLINE FORUM

SUNDBERG'S BOOK 3 IS NOW AVAILABLE...

THE HARMONIC TRADER

PART II - THE EDGE

Sundberg's **Book 3** is the long-awaited follow-up on his 1st highly appreciated Harmonic Trading Course. This sequel will fill in those questions that were left unanswered, like how to trade with precision within the octave. It also presents new groundbreaking methods that have never been seen before. The **Time Code** is so simple and powerful that Sundberg ranks it among **his top 3 findings ever**. Most importantly, he share his own trading setups with real live examples and shows you how you can construct and execute a trading plan with the methods in his courses. He identifies what he has found to be the **5 most powerful trade setups**, and shows how to maximize profits with his strategy.

500 PAGE BOOK - AUTOMATED TOOLS - ONLINE

"One morning, I was standing in the shower, preparing to go to work with a blank mind, still not really awake. Suddenly, I felt a sudden flash, an idea: "Why do you not try to apply the tools this way?" I felt overwhelmed, it was a powerful experience! I had to rush to work, but the first thing I did when I got home again was to turn on my computer. I immediately knew that this must have been the real method that Gann had disguised so elegantly. And I had discovered it on my own... or with the help of some angel that whispered it into my ear that morning in the shower..." - Johannes Sundberg

How the Gann Video Course Series Came About

By Timothy Walker

Ever since I came across Gann's lesson on *Auburn Motors* in 2007, I have been determined to find a way to make his courses more accessible to modern students. The lesson opens with the words, "*The chart enclosed on Auburn Motors has all of the natural important angles placed on it...*" There was, however, no chart included in any modern course, and try as I might, I couldn't make sense of the lesson without it. This turned out to be a blessing in disguise, as eventually I found a way to track down the historical price data so that I could make my own charts. This was the origin of the various book series I have written over the last decade which were published by *CosmoEconomics*.

Gann didn't always write in a linear manner. There are lessons which jump back and forth between different topics, and the most outstanding example of this is a lesson called *Rules for Trading in Soybeans, Corn, Wheat, Oats and Rye* (Gann was not a master of the short, pithy headline!). I have abbreviated the title to the *1950 Soybeans* lesson, because it is one of several that used Soybeans for the trade examples. His purpose in writing the lesson was to introduce several new discoveries that he had made since 1946, and he addresses each of these in turn, using mostly the November 1950 contract of Beans but also May and July. He covers the whole period from the beginning of the year until he signed off on the lesson in late October, but because he jumps back and forth, it is a difficult lesson to follow.

In 2023, I hit on the idea of putting together a video presentation on this lesson using PowerPoint slides to step through the trading one bar at a time, combining the various points that Gann teaches in the lesson into a single, continuous narrative. The presentation was well received by clients, with many people told me that they found the video format more accessible and interesting than the book.

Personally, I'm a book person through and through, but some people like to listen to an explanation. The video format gives the opportunity to talk about price action as it unfolds bar by bar, which of course is how we see the market in real time.

But I found other advantages also. When I look at a complete chart, such as the ones in the books, I see the whole picture, but not necessarily all the details. When I use the video format, so many more things become apparent, even as I'm recording it. There are times when I say, "I've just noticed such-and-such". The extra learning I received myself was so substantial that I resolved to make video versions of all the lessons which have charts.

In the *U.S. Steel* lesson, for example, there are many trades which are not executed according to Gann's basic rule, which is to buy when a swing top is crossed and sell when a swing bottom is broken. This is the key to Gann's method, which is far more complex than this simple rule would suggest. I always ask the question, "Why does he take the trade

here?” and many of these were answered for me when I wrote the book. But in the videos, the charts are vastly expanded, so we can see each individual bar more clearly.

I carefully place the Buy and Sell prices in the correct place on the bar, and when doing this I saw a lot more reasons why he was executing trades where he did. In some cases, the market would open, decline to a resistance level, and then rally. He would cover shorts and buy when price crossed the open price.

When I came to the *Chrysler Motors* lesson, this approach enabled me to see what he was doing. In that lesson, he says to use the weekly chart rather than the daily chart. Yet I knew from his comments about the lesson that it was a development of the method taught in *U.S. Steel*, not a separate trading method. So, how did he make the transition?

Here is a chart from the end of the video lesson on *Chrysler*, summarising the last few trades into the end of 1935, when he finished it.

The rules state that we should buy when the high of a weekly bar is crossed and sell when the low of a weekly bar is broken – on a bar chart, not a swing chart. If you look carefully at the points indicated on this chart, there is not a single trade taken according to that rule. In every instance Gann is long or short well before the bar is surpassed. Working from this point, I have been able to show on almost every trade where he has gone down to the daily chart (and even an intra-day chart, although we don’t have those), in order to make trades as close to turns as possible.

The quest of any serious Gann student is to work out how he was able to get so close to turns. But in order to do this properly, we need as many examples as we can find of the places where he says to trade. We have no more than a handful of examples of actual trades

that he took and their prices, although there are a couple of examples on Soybeans and Eggs. But there are literally hundreds of trades in the various trading lessons. In many of the examples, especially as the lesson progresses, he appears to give the trade prices pretty much where he would have taken them himself.

This opens the opportunity to “reverse engineer” the trades and work out why he does what he does. I do this constantly in the videos, and it is my intention that each individual trader may add his or her own understanding on top of this.

These are the advantages of the videos over the books. What about the advantages of the books over the videos? I create each format to stand on its own two feet, but I see the two presentations as complementary. The books give the opportunity to analyse Gann’s lessons carefully. I have gone through every sentence with a fine tooth comb in writing the books, and there is not a single statement that I have passed over. In the case of *Auburn Motors*, it took me well over a decade to work out what every word of that short lesson meant, but by the time I wrote it up for the book, I felt that I had it all.

This degree of detail is not possible in the videos, because their focus is the linear progression of the chart, rather than the theory behind the different techniques he was using. Each medium has its advantages and I’ve done my best to play to those strengths. I include the PowerPoint slides with each set of videos too.

The video courses are really like seminars. I record them in sessions running around 60-90 minutes each. But because I am not limited to a certain number, I can take time working through the chart. In *U.S. Steel*, for example, one 90-minute video covers around 6 months of the market. This makes some of the series quite long (over 45 hours, in the case of *U.S. Steel*), but my thinking is to explain as much as I can in the videos and then allow people to make their own notes on the slides for reviewing. They can even purchase the price data to compile the charts and do their own research if they wish.

Through the twin media of books and videos, I feel I have opened a door for students of Gann to penetrate what he was saying in his lessons. He was a trader first and an educator second, and so much of what he wrote contained his accumulated experience from 30-50 years in the markets, without necessarily explaining it in full detail. This is my claim for these works – not that they contain all the answers (there are some great minds who have studied Gann and written about him, and most of those works are published by *CosmoEconomics*). Rather, these give the base upon which other techniques and theories can be built. They remove most of the guessing about what Gann meant, because in every case his words relate to something which is apparent on the chart.

For more information on my series, *How to Trade Like W. D. Gann - Parts 1, 2, & 3*, and *How to Forecast like W. D. Gann*, as well as my ongoing Videos Series on Gann’s analysis and trading of *US Steel*, the *Dow*, *Christler*, *Soybeans* and more, see my author page at:

THE GANN MENTOR MASTERMIND NEW 45-HOUR VIDEO SERIES & TEXTBOOK!

16 YEARS OF GANN'S SWING-TRADING TAUGHT BAR BY BAR!

GANN'S TRADING METHODOLOGY TURNED INTO A TRAINING PROGRAM

BY TIMOTHY WALKER

MORE GANN VIDEO SERIES ON: CHRISTLER MOTORS - SOYBEANS - DOW JONES

HOW TO TRADE LIKE W. D. GANN SERIES 1-3

Gann's essential *Mechanical Stock Trading Method*, contains 16 years & 322 of Gann's trades on US Steel, accompanied by a 45-Hour Video Series teaching Gann's full trading methodology and style.

PART 2 - 25 MORE YEARS OF GANN LESSONS

Part 1 on US Steel was not the only lesson, just the 1st. **There are a further six lessons** which show the **development of Gann's teaching over a period of 25 years!** The method remains basically the same, but he made additions to it to improve it up to 1953!

NEW - PART 3 - THE SERIES CONCLUSION!
THE FOUR PILLARS OF ANALYSIS - GANN'S
LESSONS ON THE DOW-JONES AVERAGES

A NEW ANALYSIS OF GANN'S FORECASTING WORKS

HOW TO FORECAST LIKE W. D. GANN - PART 1

Tim Walker continues his informative series to **elaborate Gann's course lessons to make them clearer and more accessible to modern readers** by expanding upon Gann's cryptic descriptions and vague explanations and gathering up the **missing data and charts** that were never included with the original versions of Gann's courses, so no references.

To master Gann's work, one must first understand what Gann REALLY said and SEE the examples that Gann gives on REAL charts or else points are easily misunderstood!
Suede Hardcover & eBook 474 pages - 200+ Charts

ROBERT RUNDEL'S - MAGIC WORDS THRU THE ZODIAC

A DECODER KEY FOR GANN'S 'TUNNEL THRU THE AIR'

VOLUME 3 - NOW AVAILABLE!

VOL-3 THE LANGUAGE OF THE BRANCHES

Vol 1 - A Guide to the Work - Vol 2 - The Advanced Findings

Volume 1 introduces the Keys to cracking the complex symbolic code that Gann used to conceal his greatest secrets within Tunnel. It unveils a Masonic Gematria cypher which serves to decrypt references and clues concealed in names, dates and other key words thru the text. These letter/numerical conversions are used to determine potential anchor points for the engineering of important underlying market cycles hidden by Gann in this way.

Volumes 2 & 3 continue Rundle's research into further advanced topics and references which conceal even more deeply hidden and important **Rundle's research slowly unravels the secrets of Gann's system encoded into Tunnel.** The insights in these volumes represents over 25 years of ongoing, tireless research!

Stock Trading 2026:

How to Find Solid Price Movers

Following the institutional trace, repairing instead of stopping, and reading the same setup across three timeframes

Thomas Barmann of NeverLossTrading

INSTITUTIONAL MONEY LEAVES A TRACE

SAME MARKET. DIFFERENT ADVANTAGES.

INSTITUTIONAL INVESTORS

Employ some of the best analysts in the world, scanning thousands of stocks, comparing them and deciding what to accumulate and what to sell.

- Deep research & analysis
- Scan thousands of stocks
- Compare and decide
- Buy and sell in size

THE RESULT: A MEASURABLE TRACE

Their buying and selling moves the market – in a scale large enough to change price and volume. That leaves a trace on the chart, often well before the news explains it.

INSTITUTIONAL BUYING

INSTITUTIONAL SELLING

PRICE + VOLUME = THEIR FOOTPRINT

RETAIL TRADERS DON'T NEED TO OUT-ANALYZE THEM

Retail traders can't compete with institutional research desks — and they don't have to.

- FASTER EXECUTION**
Retail traders can enter and exit positions faster than an institution moving size.
- FOLLOW THE TRACE**
By following the institutional trace on the chart, they can act with speed and precision.
- A PROVEN EDGE**
This approach has outperformed plenty of professional fund managers — precisely because it doesn't carry their execution constraints.

Trade What You See

The market shows the footprints.
You just need the right tools and the right approach.

NeverLossTrading
TRADE • ANALYZE • EXECUTE

Institutional investors employ some of the best analysts in the world, scanning thousands of stocks, comparing them and deciding what to accumulate and what to sell. That process leaves a measurable trace: buying and selling on a scale large enough to move price and volume in ways that show up on a chart well before the news explaining it does. Retail traders can't out-analyze that research desk, but they don't need to. What retail traders can do is enter and exit positions faster than an institution moving size, and following that institutional trace with that speed advantage is a real, provable edge, one that has outperformed plenty of professional fund managers precisely because it doesn't carry their execution constraints.

Where Price Movers Actually Show Up

Institutional accumulation and distribution don't happen randomly across a chart; they cluster at recognizable stages. NLT's systems are built to select price movers at each of these stages specifically, rather than treating every candle as an equally likely opportunity:

- Bottom reversals, where distribution is exhausting, and accumulation is beginning to take over.
- Top reversals, the mirror case at the other end of a move.
- Initiation moves, the first leg out of a base or reversal.
- Continuation moves, where an existing trend pauses and resumes.
- Trend moves, the sustained leg once a direction is well established.
- Moves flagged by options activity, where unusual options flow itself is the tell that something is building.

Whichever trading system you choose, the stages of price development can help reveal the market's most important turning points and indicate when action may be justified. The key is not to react to every movement, but to determine—with a high degree of probability—when to enter, when to exit, and how much risk to accept.

The NeverLossTrading approach translates these decisions into clearly defined chart levels. Price thresholds such as Buy > and Sell < identify the conditions required before entering a position, while the target dot marks the intended profit objective. Red crossbars indicate the stop level, making the potential risk visible before the trade is placed.

This creates a structured framework for sizing each position based on the distances between the entry, target, and stop. Instead of guessing how much to trade, you can evaluate the setup in advance: where the trade becomes valid, where the expected move may end, and where the position should be closed if the market proves the analysis wrong. In this way, the chart helps transform price development into a defined decision process—one based on probability, risk control, and disciplined execution.

NLT Daily Multi-System Chart — CVX

How to Read the Chart

On a daily chart like this, begin by identifying which of the five stages best describes the setup. Is it a bottom or top reversal, an initiation move breaking out of a base, or a continuation within an established trend?

Next, review the **Buy >** or **Sell <** threshold drawn by the system. This is the specific price level the next candle must clear before the setup is considered triggered. It is not a level to anticipate or enter ahead of time.

Finally, evaluate the system-defined target and stop together. The daily chart establishes the potential reward-to-risk relationship for the underlying stock position before any options structure is layered on top. This sequence helps keep the analysis disciplined: first identify the stage, then wait for confirmation, and only afterward assess the trade's target, stop, and appropriate position size.

On the CVX chart, we identified one buy indication but classified it as a no-trade setup. Once a two-SPU price move following an initiation signal has been completed, the probability of

the move continuing in the same direction falls to approximately 15%. This is why the signal is not pursued: the original move has already run its course, and the remaining upside does not provide a sufficiently favorable probability to justify a new position.

Letting the System Set the Thresholds

Price action reveals which stocks are worth buying or selling, but not every stock reveals it with the same reliability. Depending on how deep and clean the institutional distribution behind a move is, some stocks are simply more forecastable than others, and NLT's systems focus on names where price movement is more predictable rather than treating the entire market as equally tradable. We publish to our subscribers stocks that cleared the analytic stage and show a high-probability trade setup.

NLT Stock Trading Alert for September 18, 2026

NLT Selected Swing Trading Indicators																	
Stock Indicators																	
Daily Reversal Indicators	Direction	Score	Pattern	Options Trading	Sector	NLT Alert	Days to Earnings	Entry Condition	Expected Holding Time	Exit Potential	Dollar Potential	% Potential	Timeliness NLT Tick	Timeliness Return	Adjustment Price	NLT Delta Force Offer	Delta Force Long-Term
NVDA	Bull	3	Bottom Reversal	Excellent	Semiconductors &	Reversal	42.5	\$ 220.03	1-10 days	\$ 225.94	\$5.9	2.7%	290	1.0%	\$ 212.53	\$ 3.02	\$ 6.00
ORCL	Bull	4	Bullish Dip	Good	Software	Reversal	58.5	\$ 152.17	1-10 days	\$ 155.37	\$3.2	6.4%	320	2.1%	\$ 142.32	\$ 4.19	\$ 8.40
Daily Options Activity	Direction	Score	Pattern	Options Trading	Sector	NLT Alert	Days to Earnings	Entry Condition	Expected Holding Time	Exit Potential	Dollar Potential	% Potential	Timeliness NLT Tick	Timeliness Return	Adjustment Price	NLT Delta Force Offer	Delta Force Long-Term
INTC	Bull	4	Bullish Dip	Good	Semiconductors &	Reversal and Power and	24.5	\$ 111.48	1-10 days	\$ 117.08	\$5.6	5.0%	220	2.0%	\$ 103.56	\$ 2.89	\$ 5.70
Volatility Adjusted Signals	Direction	Score	Pattern	Options Trading	Sector	NLT Alert	Days to Earnings	Entry Condition	Expected Holding Time	Exit Potential	Dollar Potential	% Potential	Timeliness NLT Tick	Timeliness Return	Adjustment Price	NLT Delta Force Offer	Delta Force Long-Term
CVX	Bear	5	Ambiguous Setup	Good	Oil, Gas & Consumer	Reversal	32	\$ 210.25	1-10 days	\$ 205.80	-\$4.7	-2.3%	290	1.1%	\$ 215.48	\$ 2.42	\$ 4.80

The NLT Alert highlighted four potential price movers: three long opportunities and one short setup. ORCL did not reach the system-defined entry threshold of \$152.17 on September 18, so no trade was initiated. The remaining three opportunities triggered as expected and subsequently reached their respective system-defined targets.

To keep execution objective and minimize discretionary decision-making, we use conditional buy-stop and sell-stop orders for both stock and options trades. The Entry Condition column specifies the exact Buy > or Sell < threshold that price must meet before a position can be opened. This ensures that a trade is entered only after the market confirms the setup, rather than in anticipation of a possible move.

The system also defines the relevant target and stop levels in advance, indicating when to close, protect, or adjust the position. This creates a structured process in which the entry, risk parameters, and exit plan are established before the trade is placed.

Those are the general rules, but we also have one exception. The daily options activity scan: here, we enter the position at the open of the next day, as was the case for INTC.

NLT Daily Multi-System Chart — NVDA and INTC, September 2026

Both trades reached their system-set target on the second day after entry.

Three Timeframes, One System

The same underlying logic, institutional trace plus system-defined thresholds, is applied across three timeframes: Daily, Volatility-Adjusted, and Weekly.

NLT Volatility-Adjusted Chart — CVX, September 2026

In the short CVX trading example, the stock price dropped to the required price threshold and then followed through to the target on a top reversal setup.

To add another volatility-adjusted example, we take UBER and highlight the taken chart setups:

NLT Volatility-Adjusted Chart — UBER, September 2026

A volatility-adjusted chart smooths unusually sharp daily price movements, making the underlying trend easier to interpret while still providing clearly defined system entries. By reducing the distortion caused by extreme short-term fluctuations, it can reveal additional swing-trading opportunities that may not be as apparent on a standard daily chart.

For longer-term decisions, we apply the same trading principles to weekly charts. Because each candle represents an entire week, the same one-to-ten-candle holding window extends from days to several weeks or even months. This is why reviewing Daily, Volatility-Adjusted, and Weekly charts side by side is so valuable: the same institutional accumulation can create a short-term daily opportunity and a much longer-term weekly position on the same underlying asset.

Indexes are generally more difficult to forecast than individual stocks because they reflect the combined behavior of many components. Even so, NLT indicators can still help identify important price turning points and periods when it is better to remain on the sidelines. An NLT Purple Zone, for example, signals directional ambiguity. When this zone appears, we do not open new positions until the market provides clearer confirmation.

NLT Weekly Chart — QQQ, September 2026

Following the same principles, this chart presents three valid trading opportunities: two long setups and one short setup. Although an additional short-selling signal may appear at Sell < 682.48, we do not act on signals that emerge after a trade has already been confirmed and is progressing toward its target.

This rule prevents traders from repeatedly entering the same directional move or reacting to every new signal along the way. Once a setup has been triggered, the focus remains on managing the existing position according to its predefined target and stop. As a result, the chart contains three actionable opportunities, along with an extended no-trade zone where the signals lack sufficient predictability for a new position.

Educational Note

A new signal is not automatically a new trade. Before entering, traders should determine whether the setup is fresh, confirmed, and supported by a favorable reward-to-risk relationship. If price is already moving toward an established target, the more disciplined decision may be to remain in the existing trade—or stay on the sidelines—rather than chase the move.

Trade Repair: A Second Option Besides the Stop

A stop-loss is a blunt tool. It's necessary, but it converts every trade that goes against you into a full loss the instant price crosses a line, even when the underlying thesis might still be intact. NLT's trade repair concept offers a second path: instead of automatically taking the stop, the position is repaired using options, adjusting the trade's structure to give the original thesis room to work out while still respecting risk. It doesn't replace the stop as a backstop, but it adds a return opportunity in the space between "the trade is fine" and "cut it immediately," which is where a meaningful share of trades actually sit. Aside from trading the stocks by NLT confirmed signals, we educate our subscribers in simple options trading strategies:

NLT Delta Force: Defined-Risk Leverage

Options add leverage, and leverage without a framework is exactly how undisciplined options trading turns a good stock read into a bad options outcome. The NLT Delta Force concept is that framework, a defined process for turning a directional read into a specific, risk-limited options trade rather than an open-ended bet. It answers four questions before a trade is placed:

- Which strike price to choose for the trade.
- How much time to expiration to select.
- The maximum premium worth paying, and, when the option is priced above that, switching to a vertical spread instead of paying up for a single leg.
- The exit price at which the trade is closed.

Defining all four in advance is what keeps the leverage Delta Force provides risk-limited rather than open-ended. The trade's maximum loss is known before it's entered, which is the entire point of using options as a structured strategy rather than a directional guess with extra steps.

Daily Trading Opportunities

Across Daily, Volatility-Adjusted, and Weekly signals combined, the typical holding period runs one to ten candles, with the average trade exiting around the fourth candle of the sequence. That's short enough to keep capital turning over and long enough to let a genuine institutional move actually develop. With three timeframes running simultaneously, there is, in practice, something to trade every day for NLT stock and options traders.

Decoding the Gann Master Time Factor and Wheels Within Wheels

From the number 22 to six programmable astronomical timing cycles

By Michael Chalek

I have always been intrigued by the mystery surrounding W.D. Gann's Master Time Factor. Search long enough and you will find videos, private study groups, courses, and mentors promising to decode Gann's most guarded ideas. Yet the same question keeps coming back: if the Master Time Factor is so important, where did Gann actually hide it?

Anyone who has seriously attempted to decode Gann's 1927 novel, *The Tunnel Thru the Air*, knows the difficulty. The book can be read as a story, but generations of Gann students have approached it as something more - a container for dates, numbers, names, biblical references, astronomical clues, and carefully placed irregularities. My own breakthrough began about five years ago, after I was accepted into a small private group of Gann researchers.

The members were knowledgeable, but they guarded their conclusions closely. I kept asking for one thing: not the answer, but a direction. In engineering I would call it a starting vector - one reliable line of attack that tells you where to begin.

THE STARTING VECTOR

"Start with the 1927 novel and look closely at the title. There is something out of place with it. You are an engineer and a good programmer. Figure it out for yourself. It has two main cycles, one of which you are looking for. Then read the Foreword closely. Be vigilant. Then read the Book of Daniel, Chapter 12, verses 11 and 12."

That was all I was given. The researcher who sent the message disappeared from my correspondence afterward. But it was enough. For the first time, I had a starting vector.

The First Clue: THRU

I stared at the title: *The Tunnel Thru the Air*. The obvious irregularity is the word "Thru." In formal prose, "Through" would ordinarily be the conventional spelling. Gann's choice of the shortened form immediately stood out to me. If the unusual spelling was deliberate, I reasoned, perhaps the word itself was meant to be measured.

Researchers in the group often experimented with Pythagorean numerology, in which letters are assigned numerical values. So I applied the same method to THRU.

T	H	R	U	TOTAL
2	8	9	3	22

$$T + H + R + U = 2 + 8 + 9 + 3 = 22$$

That was the first major hit. The unconventional word in the title resolved directly to 22 - the number I had been looking for in connection with Gann's Master Time Factor. But one numerical coincidence was not enough. I needed a second piece of evidence.

The Foreword: 22 Squared

The next instruction had been to read the Foreword "vigilantly." I read it several times and could not find the number 22 printed anywhere. Then I stopped looking for the number and started measuring the structure.

I counted the words. The count was 484.

$$22 \times 22 = 484$$

The clue was not written as 22. It was embedded as a square.

That changed the problem completely. The title supplied 22 through the spelling of THRU; the Foreword appeared to echo the same number through 22 squared. To me, this was exactly the kind of construction Gann used: not a direct statement, but a relationship that had to be uncovered.

Daniel 12:11-12: Another 22

The third instruction in my starting vector was biblical: read Daniel 12:11 and 12:12. These two adjacent verses contain the day counts 1,290 and 1,335.

DANIEL 12:11 - KING JAMES VERSION

"And from the time that the daily sacrifice shall be taken away, and the abomination that maketh desolate set up, there shall be a thousand two hundred and ninety days."

DANIEL 12:12 - KING JAMES VERSION

"Blessed is he that waiteth, and cometh to the thousand three hundred and five and thirty days."

My manuscript develops several timing relationships from the Daniel numbers. For the Master Time Factor clue, however, I focused on a very specific operation. I treated the leading 1 in each number separately and examined what remained:

$$1290 \rightarrow 290 \rightarrow 2 + 9 + 0 = 11$$

$$1335 \rightarrow 335 \rightarrow 3 + 3 + 5 = 11$$

$$11 + 11 = 22$$

In my research, the decision to treat the two leading ones separately was reinforced by another cryptic clue in *The Tunnel Thru the Air*: a statement that all of the soldiers were killed except two. I interpreted those two survivors as a prompt to separate the two leading 1s from the Daniel counts. Whether another reader accepts that interpretation is less important than the fact that it gave me a repeatable numerical trail: THRU produced 22, the Foreword produced 22 squared, and Daniel produced $11 + 11 = 22$.

A Fourth Check: 19 x 22

At that point I returned to the title itself and counted its letters, ignoring spaces: THE TUNNEL THRU THE AIR contains 19 letters. That immediately suggested another multiplication.

$$19 \times 22 = 418$$

The edition of Gann's book that I was examining contained 418 pages. That was enough to make me look at the number 19 more seriously. In astronomy, the Metonic cycle is approximately 19 solar years, or 235 lunar months - the interval after which the phases of the Moon return to roughly the same dates in the solar year.

This led me to a larger interpretation: the physical architecture of the book itself may have been designed to combine two cycles - 22 and 19. I cannot prove authorial intent from arithmetic alone, and page counts can vary by edition. But in the edition I was studying, the relationship was striking enough that I could not ignore it.

Why the Number 22 Kept Returning

Once 22 became the working key, I went back through the broader research that later became my book, *It's About Time All the Time*. The number was not confined to one Gann clue. It kept reappearing in symbolic, biblical, astronomical, and geometric contexts. I do not present each appearance as proof of a universal law. I present them as convergence - the same number repeatedly showing up in different systems.

CORRESPONDENCE	THE 22 RELATIONSHIP
Gann title clue	THRU = 22 in Pythagorean numerology
Gann Foreword	484 words = 22×22
Daniel 12:11-12	290 -> 11 and 335 -> 11; $11 + 11 = 22$
Hebrew alphabet	22 letters
Book of Revelation	22 chapters
Templar title	"The Poor Knights of Christ" contains 22 letters
Mercury	Approx. 88-day orbit; $88 / 4 = 22$

One later correspondence became especially personal. The title of my own book, *It's About Time All the Time*, totals 88 in the same Pythagorean system and contains 22 letters when spaces and punctuation are ignored. I did not create the title to force those numbers; I noticed the relationship afterward. For

me, it became another reminder to keep investigating 22 rather than dismissing it after the first few coincidences.

Mercury: Turning 22 into a Tradable Time Unit

Finding a number is not the same thing as knowing how to trade it. My next problem was practical: how could the Master Time Factor be translated into a market-timing interval?

Mercury supplied a natural bridge. Mercury completes one heliocentric orbit around the Sun in approximately 88 days. Divide that orbit into four equal 90-degree harmonics and the time interval is approximately 22 days.

$$88 \text{ days} / 4 = 22 \text{ days}$$

$$360 \text{ degrees} / 4 = 90 \text{ degrees}$$

A quarter-cycle harmonic of Mercury.

This is where the Master Time Factor becomes more than a symbolic number. In my short-term work, 22 can be expressed as a calendar-day timing interval because it is one quarter of Mercury's approximately 88-day orbital period. The long-term 22-year concept and the short-term 22-day harmonic are different scales, but they share the same numerical key.

That distinction is important. I do not treat 22 as a magical forecast that produces a turn every 22 days. A timing count is a warning window, not a command to buy or sell. The question is whether a 22-based projection converges with other independent evidence: a major pivot, another planetary relationship, a geometric count, a Fibonacci timing projection, or another cycle already pointing toward the same area of time.

From Decoding to Engineering

My engineering background has always made me uncomfortable with stopping at symbolism. A clue is interesting. A pattern is more interesting. But a trading method has to be reduced to rules that can be calculated, programmed, tested, and compared with actual market history.

That is the next stage of this article. Once I had identified 22 as the Master Time Factor and found the Mercury quarter-cycle that converts it into a practical short-term interval, I began building applications that could project these relationships forward from real market pivots. The objective was not to create another black box. It was to take the trail hidden in Gann's writing and turn it into something measurable.

THE PRINCIPLE I USE

A date earns importance when independent methods converge on the same time window. One count is a clue. A cluster is evidence worth watching.

The rest of this article follows that path from clue to computation. I first show how the Master Time Factor can be expressed through planetary harmonics and the Time Pivot $\pi/4$ Projector. I then develop the Lunar Time Cycle and the larger Gann Cycles Decoded framework, where six astronomical clocks can be studied separately or as nested Wheels Within Wheels.

Source and Interpretation Notes

- Biblical quotations are from the King James Version. Daniel 12:11 gives the 1,290-day count; Daniel 12:12 gives the 1,335-day count.
- Mercury's orbital period is stated approximately as 88 days; the 22-day interval is the quarter-cycle harmonic used in this analysis.
- The Metonic cycle is approximately 19 solar years, or 235 lunar months.
- The 418-page relationship refers to the edition of *The Tunnel Thru the Air* used in this research; page counts can vary by edition.
- The numerical and symbolic relationships presented here are the author's research interpretation. They are intended as a trail to be tested against market behavior, not as a claim that any single correspondence proves a universal law.

The Cardinal Cross: Mercury and Moon Longitude

Using 45-degree observations to isolate the 90-degree cardinal cycle

The Master Time Factor becomes more useful when the numerical idea is translated into an observable astronomical framework. One of the simplest structures is the circle itself. A full 360-degree revolution can be divided into eight 45-degree sectors. Those eight sectors contain both the four cardinal axes - 90, 180, 270 and 360 degrees - and the four diagonal 45-degree divisions between them.

$$360 \text{ degrees} / 8 = 45 \text{ degrees}$$

The 45-degree framework shows both the cardinal cross and its diagonals.

I monitor the 45-degree harmonics because they let me see the complete angular structure, but I give special attention to the 90-degree cardinal increments. The objective is not to assume that every angular crossing must produce a market reversal. The objective is to identify a repeatable astronomical schedule and then compare it with actual market pivots.

Heliocentric Mercury as the Primary Clock

The Mercury study shown below is heliocentric and is anchored to the June 2, 2026 market high. The output records Mercury's longitudinal movement forward through time. Intermediate steps are retained so the entire progression can be seen, while the 45-degree and 90-degree harmonics provide the principal reference points for the timing study.

My interest is in the recurring high-low rhythm that develops as Mercury advances through these angular sectors. The 90-degree points lie directly on the cardinal cross, while the 45-degree points provide the diagonal divisions between them. This gives me a structured sequence that can be compared with the market rather than a date selected after the fact.

seq	increment_deg	cumulative_deg	target_tropical_lon_deg	date_local	time_local

Figure. Heliocentric Mercury longitude projected forward from the June 2, 2026 anchor. The table retains intermediate steps so the 45-degree and 90-degree harmonic structure can be examined.

The Moon as a Confirmation Cycle

I then apply the same angular logic to the Moon as an additional confirmation tool. The lunar study is anchored from the April 7, 2025 low and is calculated at 45-degree increments so that both diagonal and cardinal positions remain visible.

Within that sequence, the 90-degree lunar increments receive particular attention because they can be compared directly with Mercury's 90-degree cardinal-cross dates. When Mercury and the Moon independently point toward the same area of time, the agreement becomes more important to me than either projection standing alone.

Figure. Lunar longitude sequence from the April 7, 2025 anchor. The 45-degree table makes the 90-degree cardinal-cross points easy to isolate and compare with Mercury.

THE CONFIRMATION PRINCIPLE

Mercury supplies one timing schedule. The Moon supplies another. I am most interested when independent 90-degree harmonics begin to cluster in the same market window.

From Degrees to Radians

This 45-degree framework also creates a natural bridge to the next application. In radian measure, 45 degrees equals $\pi/4$. The cardinal points occur at the even multiples of $\pi/4$: 90 degrees = $\pi/2$, 180

degrees = π , 270 degrees = $3\pi/2$, and 360 degrees = 2π . That relationship is the mathematical foundation of the Time Pivot $\pi/4$ Projector discussed next.

45 degrees = $\pi/4$ radians

The diagonal and cardinal structure can therefore be expressed in either degrees or radians.

The Time Pivot $\pi/4$ Projector

Converting Price Into Future Time Through the Geometry of π

The Master Time Factor research establishes a broader idea that has guided much of my work: time can be studied through number, geometry, harmonic division, and repeated market structure. The Time Pivot $\pi/4$ Projector grew from that same research philosophy. It is not a direct derivation of the 22-cycle itself. Instead, it is another way of asking the same practical question: can the information contained in a market pivot be converted into a schedule of future dates worth watching?

I developed this software recently, but I worked with the underlying method for months before making the application available. I use it for both swing-trading and day-trading research, and it has become one of the tools I regularly incorporate into my weekly market updates. The purpose is straightforward: start with an important pivot price, scale that price, apply a repeating $\pi/4$ harmonic, and convert the result into future time.

The Time Pivot $\pi/4$ Projector. The program converts selected market pivots into future timing projections.

Why π Belongs in a Cycle Framework

Pi (π) is the mathematical constant defined by the ratio of a circle's circumference to its diameter. Its value begins 3.14159 and continues indefinitely without repeating. For this application, however, the

most important feature of π is not its long decimal expansion. It is the fact that π is the natural language of angular measurement in radians.

A complete circle contains 360 degrees, which is equivalent to 2π radians. Half a circle is 180 degrees, or π . A quarter circle is 90 degrees, or $\pi/2$. Divide the circle into eight equal sectors and each sector is 45 degrees, or $\pi/4$. That eighth-circle division is the foundation of the software.

$$360^\circ = 2\pi \text{ radians}$$

$$45^\circ = \pi/4 \text{ radians}$$

Eight $\pi/4$ intervals complete one full 360-degree cycle.

This degree-radian relationship also explains why π appears so naturally in the mathematics of periodic motion. Trigonometric functions such as sine and cosine describe repeating waves by measuring angles in radians. Pi also appears throughout mathematics and physics wherever rotation, oscillation, and periodic behavior are being described. None of that proves that financial markets are governed by π . It does explain why π is a mathematically natural constant to test when the subject being studied is cyclical motion.

That distinction is important. I do not begin by assuming that π must forecast a market turn. I begin with a geometric relationship, convert it into a repeatable rule, and then test the resulting dates against actual market behavior.

CYCLE	DEGREES	RADIANS
1	45°	$\pi/4$
2	90°	$\pi/2$
3	135°	$3\pi/4$
4	180°	π
5	225°	$5\pi/4$
6	270°	$3\pi/2$
7	315°	$7\pi/4$
8	360°	2π

Degree-radian cycle wheel. The 45-degree diagonals are $\pi/4$ intervals; the 90-degree cardinal axes form the principal cross.

From a Market Pivot to a Time Projection

The program begins with a significant high or low. The price itself is not used blindly. It is first scaled by moving the decimal point to the left. The application provides selectable multipliers of 0.1, 0.01, 0.001, and 0.0001 so that the same market pivot can be studied across different time horizons.

The scaling choice matters because it controls the magnitude of the time projection. A smaller adjusted value generally produces a nearer date, while a larger adjusted value reaches farther into the future. The research discipline is to use consistent settings and test them across many pivots rather than changing the multiplier after the fact simply to fit a known market turn.

The Core Formula

Once the pivot has been scaled, the adjusted price is multiplied by a selected cycle number and by $\pi/4$. Cycle 1 is 45 degrees, Cycle 2 is 90 degrees, Cycle 4 is 180 degrees, and Cycle 8 completes the full circle at 360 degrees.

$$\text{Adjusted Pivot Price} \times \text{Cycle} \times \pi/4 = \text{Projected Time}$$

The software provides two ways to interpret the result. In Days mode, the calculated value is treated directly as calendar days. In Hours mode, the same value is treated as hours and then divided by 24. Preserving fractional days also makes it possible for a projection to include a calculated time of day.

DAYS MODE: Adjusted Price $\times$ Cycle $\times \pi/4$ = Calendar Days

HOURS MODE: Adjusted Price $\times$ Cycle $\times \pi/4$ = Hours; then Hours $\div 24$ = Calendar Days

WHY I KEEP BOTH MODES

The same pivot can carry more than one useful scale of information. A daily projection may identify the session to watch; an hours-based projection may pull the same geometry into a shorter trading horizon.

Example One: Converting Price to Days

Consider an SPX pivot near 7,620 on June 2. Moving the decimal three places to the left converts the price to 7.620. If I use Cycle 4, the angular interval is $4 \times \pi/4 = \pi$, or 180 degrees. The calculation becomes:

$$7.620 \times \pi = 23.94 \text{ calendar days}$$

That is approximately 24 calendar days, projecting from the June 2 pivot into the June 26 area. In my market work, that date was supported by other timing factors, including a change in the Moon's latitude. That is the type of convergence I want to see. The π calculation identifies a window; independent timing evidence tells me whether that window deserves additional weight.

Example Two: Converting the Same Price to Hours

The same pivot can be examined on a shorter scale. Moving the decimal two places to the left converts 7,620 to 76.20. Using the same Cycle 4, or π , relationship:

$$76.20 \times \pi = 239.39 \text{ hours}$$

$$239.39 \div 24 = 9.97 \text{ calendar days}$$

The result is just under ten calendar days, bringing the projection into the June 11-12 area from the June 2 pivot. The geometry is the same; the time scale has changed. This is one reason I consider the decimal shift part of the research rather than a cosmetic adjustment.

The projection does not determine direction by itself. If price is declining into the window and my other work supports a potential low, I look for long-side confirmation. If price is advancing into the same kind

of window and the broader structure argues for a high, I study it from the opposite side. Time tells me when to become more alert; price action still has to tell me what the market is actually doing.

SPX example showing time-price squares projected from earlier pivots. The dates become more important when other independent timing methods cluster nearby.

How the Software Organizes the Research

The application analyzes daily data for the SPX cash market, E-mini continuous futures, and Bitcoin. It identifies significant pivot highs and lows using a selectable bar-strength setting, applies the chosen price multiplier, and then calculates future projections through successive $\pi/4$ intervals.

The user can project every cycle from 1 through a selected maximum, or calculate even-numbered cycles only. That second option focuses attention on 90-degree increments - $\pi/2$, π , $3\pi/2$, and 2π - corresponding to the cardinal cross of 90, 180, 270, and 360 degrees.

After the calculation is complete, an individual pivot can be isolated so only the dates generated from that pivot are shown. The full projection table can also be restored and sorted by either original pivot date or future projected date. Sorting by the future date is especially useful because it exposes clusters: several independent historical pivots may project into the same narrow future window.

Main menu and projection table. The program can isolate a single pivot, display all projections, switch between Days and Hours, and sort future dates for cluster analysis.

What I Am Looking For

The purpose of the Time Pivot $\pi/4$ Projector is not to generate a long list of dates and declare that every one must reverse the market. I use the output as a timing map. The dates tell me where to look more closely.

A projected date becomes more meaningful when another method independently points to the same area: a planetary cycle, a lunar event, a Fibonacci time count, a Square of Nine projection, a natural-square date, or one of the other timing tools I use in my research. I have always placed more weight on convergence than on a single isolated calculation.

THE OPERATING RULE

A $\pi/4$ date is a warning bell, not a trade signal. The value comes from advance preparation and independent confirmation.

Why This Belongs in the Master Time Factor Article

The Master Time Factor portion of this article begins with decoding: unusual words, numerical relationships, biblical counts, planetary harmonics, and Gann's use of geometry. The Time Pivot $\pi/4$ Projector moves the discussion from decoding to implementation. It demonstrates how a geometric idea can be reduced to a transparent formula and programmed so that the same rule can be applied consistently across many market pivots.

That is important to me as both an engineer and a trader. A theory becomes much more useful when I can define the input, state the formula, generate the future dates before the market arrives there, and then compare those projections with what actually happens. That is how I use the $\pi/4$ Projector in my weekly work: not as a black box, but as one component in a larger timing framework.

The Lunar Time Cycle is the first of those decoded timing engines. The final section widens the view to the complete Gann Cycles Decoded framework: Saint Marie, MAM, the Lunar Time Cycle and the Lone Aviator, organized as slower and faster wheels that can be calculated independently and then compared on the same SPX chart.

Method Notes

- π is approximately 3.14159 and is the ratio of a circle's circumference to its diameter.
- A full circle is 2π radians; 45 degrees equals $\pi/4$, which creates eight equal sectors around 360 degrees.
- The software formula multiplies an adjusted pivot price by a selected cycle number and $\pi/4$; the result is then interpreted as days or hours.
- The application supports SPX, E-mini continuous futures, and Bitcoin daily data, along with selectable pivot strength, price scaling, cycle count, sorting, and CSV export.
- Projected dates are research windows, not guaranteed reversal dates. The method is intended to be used with independent confirmation and risk management.

THE LUNAR TIME CYCLE

*A five-number Moon sequence hidden in W.D. Gann's **The Tunnel Thru the Air***

For almost a century, students of W.D. Gann have searched his 1927 novel for hidden market-timing instructions. My approach was to reduce the clues to numbers, test those numbers against actual lunar motion, and then compare the projected dates with market pivots. One of the clearest results was a repeating sequence of $73^\circ / 79^\circ / 83^\circ / 89^\circ / 97^\circ$ applied to the Moon's longitude.

Figure 1. The Moon is a natural astronomical clock: measurable, repetitive and fast enough to create practical timing intervals.

The Clue Hidden in Plain Sight

In one section of *The Tunnel Thru the Air*, Gann wrote about a Radium Ray capable of killing the enemy within a range of 75 to 100 miles. In another section, he described an airplane with four wings carrying 25 bombs. Those details may look like fiction. I treated them as deliberate numerical clues.

THE FIRST CALCULATION IS ALMOST EMBARRASSINGLY SIMPLE

$$25 \text{ bombs} - 4 \text{ wings} = 21$$

Gann had a deep interest in numbers, and prime numbers in particular. Beginning with the 21st prime and continuing through the 25th prime produces a striking five-number sequence. The resulting values run from 73 to 97 - closely matching the numerical region suggested by Gann's 75-to-100-mile clue.

Prime position	Prime number	Lunar increment
21st	73	73°
22nd	79	79°
23rd	83	83°
24th	89	89°
25th	97	97°

THE REPEATING LUNAR SEQUENCE

$$73^\circ \rightarrow 79^\circ \rightarrow 83^\circ \rightarrow 89^\circ \rightarrow 97^\circ \rightarrow \text{repeat}$$

Why I Am Publishing the Decoding

The Gann education business has built a mystique around *The Tunnel Thru the Air*. Search YouTube and the wider Gann-education market and you will find videos, courses, private groups and mentorships built around the promise of revealing hidden codes, lunar methods and time cycles. Some are inexpensive. Others are not.

At the time of writing, one public course devoted to the codes of *The Tunnel Thru the Air* is listed at \$800, while another Tunnel Thru the Air master-trader program is advertised at more than \$15,000. I had also encountered versions of what others called the Lunar Time Cycle reportedly marketed privately for as much as \$5,000.

MY APPROACH IS DIFFERENT

The decoding logic is shown in this article. The Gann Cycles Decoded book and companion six-cycle software are offered together for \$299. The Lunar Time Cycle application is included.

From Five Numbers to a Lunar Timing Engine

The five prime numbers are not used as prices and they are not treated as fixed calendar-day counts. They are applied as successive angular advances in the Moon's longitude. Starting from an anchor date and time, the Moon advances 73 degrees, then 79 degrees, then 83 degrees, then 89 degrees, then 97 degrees. The sequence then begins again at 73 degrees and continues forward through time.

STEP	WHAT THE METHOD DOES
1	Choose an objective anchor date and time.
2	Calculate the Moon's longitude at the anchor.
3	Advance the target lunar longitude by 73°, then solve for the date and time the Moon reaches it.
4	Repeat with 79°, 83°, 89° and 97°.
5	Return to 73° and continue the sequence through the selected ending date.

Why Degrees Matter More Than Fixed Days

The software uses astronomical lunar motion rather than simply adding a fixed number of calendar days. That distinction matters because the method is based on where the Moon actually moves in zodiacal longitude. The output therefore represents a sequence of astronomical events, not a calendar approximation.

The Moon is especially useful as a timing engine because it moves quickly. Outer-planet cycles may take months or years to unfold; lunar motion creates shorter pulses that can be compared with market behavior on a more practical time scale. In this research, the sidereal framework measures the Moon against the stars, while the 73/79/83/89/97 sequence tracks actual movement in longitude.

The Anchor Is Essential

A timing cycle needs an anchor. Without one, the sequence floats. I have tested this lunar sequence from objective market reference points, including the creation of the SPY ETF and major SPX pivot dates. The principle is the same: choose a defensible anchor, project the angular sequence forward, and then compare the resulting dates with actual market behavior.

In the studies described in my book, the projected sequence aligned with approximately 90 percent of the alternating pivot points I examined. That is a research observation, not a claim that every projected

date must produce a high or low. Markets are complex, and no single timing method should be treated as a stand-alone trading signal.

Turning the Decoding Into Software

Once the sequence was defined, the next problem was practical: nobody wants to calculate hundreds of future lunar positions by hand. I therefore converted the method into a simple software generator. The program accepts a starting anchor date and time, an ending date, and a U.S. time-zone setting, then calculates the repeating lunar sequence forward and writes the results to a CSV file.

Figure 2. Lunar Time Cycle software generator. The user supplies the anchor, ending date and time zone; the program computes the repeating 73°/79°/83°/89°/97° sequence.

What the Application Does

- Accepts a user-defined starting anchor date and ending date.
- Supports Eastern, Central, Mountain and Pacific time settings.
- Calculates the Moon's longitude from the selected anchor.
- Projects the repeating 73° / 79° / 83° / 89° / 97° angular sequence.
- Uses astronomical lunar motion rather than fixed calendar-day counts.
- Identifies future lunar timing windows for comparison with market highs, lows and trend changes.
- Exports the projected dates and times to a CSV file for chart comparison and research.
- Is not tied to one market; the same timing structure can be studied against any instrument or research subject.

What the Output Looks Like

The output is intentionally transparent. Each row shows the current segment of the sequence, the angular increment, the cumulative angular movement, the target lunar longitude, the calculated local date and time, and the Moon's latitude. The researcher can then place those dates on a market chart and judge the results directly.

seq	increment_deg	cumulative_deg	target_sidereal_lon_deg	datetime_local	moon_lat_deg
61	73	5125	200.631875	5/1/2026 18:20	-4.672454

83	83	6971	246.631875	9/19/2026 0:39	-4.472101
84	89	7060	335.631875	9/26/2026 4:08	2.62448
85	97	7157	72.631875	10/3/2026 1:30	4.088833
86	73	7230	145.631875	10/8/2026 7:59	-1.827513
87	79	7309	224.631875	10/14/2026 12:30	-5.011134
88	83	7392	307.631875	10/21/2026 10:08	0.339145
89	89	7481	36.631875	10/27/2026 20:26	5.028395
90	97	7578	133.631875	11/3/2026 15:28	-0.960022

Figure 3. Example CSV output. The 73°/79°/83°/89°/97° sequence repeats continuously as the program solves for each future lunar longitude target.

A Research Tool, Not a Black Box

The point of the application is not to hide the method behind a button. The logic is visible: the Gann clues, the prime-number positions, the five lunar increments, the anchor, and the projected dates. The software simply handles the astronomical arithmetic accurately and consistently.

This is important because market-cycle research can quickly drift into numerology if the researcher cannot explain where a number came from or how it is being tested. My standard is simple: begin with

the clue, derive the relationship, apply it to real data, and then let the market evidence decide whether the relationship deserves further attention.

How I Use the Lunar Time Cycle

I do not take a trade simply because one Lunar Time Cycle date appears on the calendar. I use it as one timing component within a broader composite of independent methods. A projected lunar date becomes more interesting when it clusters with other time-cycle calculations, planetary relationships, price geometry or established technical evidence.

That is why I describe myself as a forensic trader. A single clue may be interesting; several independent clues pointing to the same area are far more important. The Lunar Time Cycle is valuable because it gives me another independent timing schedule that can be generated in advance and then compared with the market without changing the rules after the fact.

The Larger Point

The most important lesson is not merely that the sequence is 73, 79, 83, 89 and 97. The larger lesson is how Gann forced the serious student to think. The Tunnel Thru the Air does not present a trading method as a neat checklist. It presents symbols, numbers, dates, scientific references and narrative details that invite the reader to test relationships rather than accept them on faith.

In this case, the trail begins with a 75-to-100-mile Radium Ray, a four-wing airplane and 25 bombs. It passes through the 21st through 25th prime numbers. It ends with a repeating lunar-longitude sequence that can be projected years into the future and tested against market pivots.

THE SECRET IS ONLY USEFUL IF IT CAN BE TESTED

73° → 79° → 83° → 89° → 97° is not a mystical slogan. It is a repeatable astronomical schedule with a defined anchor, defined increments and verifiable dates.

WHEELS WITHIN WHEELS

Six astronomical clocks reconstructed from The Tunnel Thru the Air

The Master Time Factor began with the number 22. The later work forced me to ask a harder question: what if Gann's references to major, minor and intermediate cycles describe several clocks operating at different speeds rather than one universal cycle? The result is the **Gann Cycles Decoded** framework.

The framework contains six independent astronomical calculations. Each has its own anchor, planetary measurement, angular sequence and HIGH or LOW polarity. The purpose is not to make six lines agree.

It is to observe where the clocks converge, separate, lead and lag while keeping every rule visible.

Figure 4. The Gann Cycle Program Launcher provides direct access to six original calculation programs. Each program retains its own inputs, astronomical calculations, results and exported schedule.

Six Astronomical Clocks

The six programs divide naturally into three paired comparisons. Saint Marie combines a slower Mercury-Venus relationship with a faster Mercury clock. MAM combines a slower Mercury-Mars relationship with a faster Mercury clock. The Lunar Time Cycle is paired with the Lone Aviator, the fastest Mercury cycle in the present structure.

CYCLE	MEASUREMENT	REPEATING INCREMENT	ROLE
Saint Marie 2P	Mercury-Venus	24° then 36°	Slower outer wheel
Saint Marie 1P	Mercury	30° then 45°	Faster inner wheel
MAM 2P	Mercury-Mars	40° then 60°	Slower MAM wheel
MAM 1P	Mercury	54° then 36°	Faster MAM wheel
Lunar Time Cycle	Moon	73° 79° 83° 89° 97°	Intermediate lunar wheel
Lone Aviator	Mercury	12° then 18°	Fastest Mercury wheel

The Master Time Factor began with the number 22. The later work forced me to ask a harder question: what if Gann's references to major, minor and intermediate cycles describe several clocks operating at different speeds rather than one universal cycle? The result is the **Gann Cycles Decoded** framework.

The framework contains six independent astronomical calculations. Each has its own anchor, planetary measurement, angular sequence and HIGH or LOW polarity. The purpose is not to make six lines agree.

It is to observe where the clocks converge, separate, lead and lag while keeping every rule visible.

Figure 4. The Gann Cycle Program Launcher provides direct access to six original calculation programs. Each program retains its own inputs, astronomical calculations, results and exported schedule.

Six Astronomical Clocks

The six programs divide naturally into three paired comparisons. Saint Marie combines a slower Mercury-Venus relationship with a faster Mercury clock. MAM combines a slower Mercury-Mars relationship with a faster Mercury clock. The Lunar Time Cycle is paired with the Lone Aviator, the fastest Mercury cycle in the present structure.

CYCLE	MEASUREMENT	REPEATING INCREMENT	ROLE
Saint Marie 2P	Mercury-Venus	24° then 36°	Slower outer wheel
Saint Marie 1P	Mercury	30° then 45°	Faster inner wheel
MAM 2P	Mercury-Mars	40° then 60°	Slower MAM wheel
MAM 1P	Mercury	54° then 36°	Faster MAM wheel
Lunar Time Cycle	Moon	73° 79° 83° 89° 97°	Intermediate lunar wheel
Lone Aviator	Mercury	12° then 18°	Fastest Mercury wheel

Saint Marie Mercury and Venus

Saint Marie contains two related clocks. The two-planet calculation, Saint Marie 2P, measures the directed heliocentric relationship between Mercury and Venus. It advances through alternating 24° and 36° steps. The reconstructed master cycle contains 19 Mercury-Venus revolutions, or $6,840^\circ$.

Saint Marie 1P follows Mercury alone through alternating 30° and 45° steps. Its larger structure contains 31 Mercury revolutions plus a 90° Time Factor, totaling $11,250^\circ$. Although the 1P and 2P calculations use different astronomical measurements, their master clocks return to their larger phase at nearly the same time. That near-synchronization is one of the strongest reasons to examine them together.

The 2P clock defines the broader environment; the 1P clock works inside it. The Mercury latitude levels near $\pm 3^\circ 22'$ and $\pm 6^\circ 42'$ are treated as Saint Marie inversion-active zones. They identify locations where a polarity inversion is permitted. They do not order the program to reverse every projected HIGH or LOW.

Figure 5. Saint Marie Wheels Within Wheels. The blue line is Saint Marie 1P Mercury 30° and 45° . The green line is Saint Marie 2P Mercury-Venus 24° and 36° . Both schedules are plotted over the same SPX price history without changing either calculation.

MAM Mercury and Mars

MAM first appeared in the text as **Marie the Angel of Mercy**. The same initials also read naturally as **Mercury And Mars**, which supplied the planetary relationship for the slower two-planet clock.

MAM 2P measures the directed heliocentric Mercury-Mars relationship through alternating 40° and 60° advances. Its master cycle contains 20 Mercury-Mars revolutions. MAM 1P follows Mercury alone through 54° and 36° advances. Its master cycle contains 23 Mercury revolutions, totaling $8,280^\circ$.

The inner geometry is direct: $54^\circ + 36^\circ = 90^\circ$. The pair closely matches Mercury's movement from a 0° heliocentric latitude crossing to its approximate $\pm 7^\circ$ latitude extreme. Those same 0° and $\pm 7^\circ$ levels define the MAM inversion-active zones. The numerical ratio and the astronomical latitude geometry therefore meet at the quarter circle.

Figure 6. *MAM Wheels Within Wheels*. The blue line is MAM 1P Mercury 54° and 36°. The green line is MAM 2P Mercury-Mars 40° and 60°. The faster and slower wheels remain independent even when they are displayed on one chart.

Lone Aviator Mercury 12 and 18

The Lunar Time Cycle explains the Moon component of the fast timing structure. The Lone Aviator adds a Mercury clock built from alternating 12° and 18° advances. One 12° and 18° pair equals 30°. Three pairs create a 90° quarter cycle, and twelve pairs complete one 360° Mercury revolution.

$$12^\circ + 18^\circ = 30^\circ \quad \text{Three pairs} = 90^\circ \quad \text{Twelve pairs} = 360^\circ$$

The reconstructed Lone Aviator master cycle contains 42 Mercury revolutions, totaling 15,120°. The clue chain returns to the aviation and Lindbergh narrative in *The Tunnel Thru the Air*: Robert's airplane has a 12-cylinder motor, approximately \$18,000 is associated with his airplane plans, the aircraft has four wings, and Robert is later identified with the Lone Aviator theme. The 90° quarter cycle also returns to the Master Time Factor through Mercury's approximately 88-day orbit: 88 divided by four is 22.

A definitive Lone Aviator inversion zone has not yet been established. The calculation therefore preserves its normal alternating HIGH and LOW sequence instead of borrowing an inversion rule from Saint Marie, MAM or the Moon. That restraint matters. An unresolved rule should remain unresolved until the astronomy and the market evidence support it.

Lunar Time Cycle and Lone Aviator

The Lunar Time Cycle and the Lone Aviator create the fastest paired comparison in the suite. The Moon advances through 73°, 79°, 83°, 89° and 97°. Mercury advances through 12° and 18°. Because the two clocks use different bodies and different degree sequences, an agreement between them is genuinely independent rather than a duplicate calculation.

The overlay also makes disagreement visible. One cycle may turn before the other, overshoot it, or produce a countertrend signal inside the larger timing environment. I do not discard those observations

merely because they run against the slower wheel. I label them as countertrend setups and require stronger price confirmation and risk control.

Figure 7. Lunar Time Cycle and Lone Aviator Wheels Within Wheels. The yellow line is the Moon's 73° 79° 83° 89° 97° sequence. The blue line is the Lone Aviator Mercury 12° and 18° sequence. The chart exposes both convergence and separation between the two fast clocks.

Neighborhood Street House Number

The metaphor I use for nested timing is **Neighborhood Street House Number**. A slow outer cycle identifies the broad timing environment, like a neighborhood. A faster wheel narrows the search to a street. The fastest timing component identifies the finer address inside that environment.

Saint Marie 2P → Saint Marie 1P → Lunar Time Cycle → Lone Aviator

This four-layer chain is one working hierarchy, not a demand that every clock reverse together. MAM supplies a second paired structure that can be studied alongside it. Rare agreement among independent wheels may identify a higher-confidence timing cluster. Separation is also information because it reveals which clock is leading, lagging or operating countertrend.

Inversion Zones and Polarity

Each schedule begins from a selected anchor and a starting HIGH or LOW designation. The program then alternates polarity through the projected sequence. Inversion research adds a conditional layer: Saint Marie monitors Mercury latitude near $\pm 3^{\circ}22'$ and $\pm 6^{\circ}42'$; MAM monitors 0° and approximately $\pm 7^{\circ}$; the Lunar Time Cycle monitors 0° Aries and a still-developing 34-lunar-cycle structure.

The rule is precise. An inversion zone is permission, not a command. A projected turn that reaches an eligible zone may invert if the surrounding market structure supports it. The zone does not automatically convert every HIGH to a LOW or every LOW to a HIGH. The normal sequence remains the baseline until evidence justifies the exception.

The Chart Is the Test

The research sequence is fixed before the result is judged. I select the anchor, identify the astronomical measurement, apply the published degree sequence, assign the starting polarity and generate the future dates. Only then do I place those dates over SPX price history. This order prevents the calculation from being redesigned after the market has already turned.

The current chart window displays 100 trading bars at a time and scrolls horizontally through the available history. The user can switch between candlesticks and OHLC bars, hover over price bars and cycle markers to inspect dates, and save the displayed chart as a PNG image. Those functions are not cosmetic. They make the comparison repeatable, reviewable and easy to preserve as research evidence.

The tables and charts show every important step: the angular increment, cumulative movement, target longitude, local date and time, HIGH or LOW designation and any applicable inversion alert. The software performs the astronomy, but it does not hide the rule.

What Convergence Means

A timing cluster matters because the contributing methods are independent. Mercury alone, Mercury relative to Venus, Mercury relative to Mars and the Moon's longitude do not measure the same thing. When several of them point toward the same narrow area of time, the agreement deserves attention. It still does not determine direction by itself. Price behavior, trend structure and risk management remain necessary.

I distinguish between trend-aligned and countertrend signals rather than deleting the countertrend cases. A faster wheel can identify a tradable reaction inside a move governed by a slower wheel. The chart allows that relationship to be studied honestly because every projected turn remains visible.

What Changed in My Reading of Gann

The number 22 was the opening key, not the end of the search. It led from THRU and the 484-word Foreword to Mercury's quarter orbit, the cardinal cross and the geometry of $\pi/4$. The Lunar Time Cycle then showed how a narrative clue could become a repeating astronomical schedule. Saint Marie, MAM and the Lone Aviator extended that process into a family of clocks that can be programmed and compared.

I cannot prove Gann's private intent from numerical correspondence alone. I can state every input, publish every angular sequence, generate the dates before the market reaches them and preserve the results on a chart. That is the standard I want the work to meet. A hidden clue becomes useful only when another researcher can calculate it and test it.

This is a science of probability and not an exact science.

For Readers Who Want to Test It

The decoding logic behind the Lunar Time Cycle and the larger six-cycle framework is presented here so readers can see where the numbers came from. Researchers can reproduce the work from astronomical longitude data. Readers who prefer an automated workflow can use the individual programs or the Gann Cycle Program Launcher; the Gann Cycles Decoded book and six-program software suite are offered together for \$299, with the Lunar Time Cycle program included. Details are listed at AstroTimeCycles.com.

GANN CYCLES DECODED BOOK AND SOFTWARE PACKAGE - \$299

Includes the Gann Cycles Decoded book and six timing applications, including the Lunar Time Cycle. The Lunar program calculates the 73° / 79° / 83° / 89° / 97° sequence and exports projected dates and times to CSV.

Software Store: AstroTimeCycles.com

Educational and research use only. Market timing methods do not guarantee future results.

Market-context pricing note. Public pricing checked August 30, 2026: [The Cycles and The Codes](#) was listed at \$800; [Tunnel Thru the Air Master Trader Program](#) was advertised at US\$15,000+. Prices and offers can change.

ABOUT THE AUTHOR

Michael Chalek

Michael Chalek is an electrical engineer, computer-modeling specialist, and trading-system developer with decades of experience in the stock and commodity markets. His work has focused on converting market ideas into objective, programmable methods for trend trading, day trading, and market-timing research.

His trading systems and research have been featured in publications including The Wall Street Journal, Forbes, Technical Analysis of Stocks & Commodities, Worth Magazine, Futures & Options World, and Futures Magazine. Among the publicly released systems associated with his work are Dual Thrust, Talon, Price Surge Trigger Point, Squeeze, and Floor Monitor. Several of these systems were highly ranked by Futures Truth, an independent trading-system evaluator.

Over the course of his career, Chalek has worked with or been associated with a number of well-known figures in the trading industry, including Joseph Granville, Larry Williams, Walter Bressert, J.D.

Hamon, Jake Bernstein, Bruce Babcock, and John Hill. His work included system testing, research, programming, and the development of trading methodologies.

Chalek earned both a B.S. and an M.S. in Electrical Engineering from the University of Illinois and completed additional graduate study in microprocessor theory and design. From 1977 through 1986, he worked as a design engineer for Bell Laboratories (AT&T), where his engineering background was applied to large-scale-integration modeling techniques. In 1986 he left AT&T to concentrate full time on entrepreneurial work in the investment field.

His current research centers on market timing, W.D. Gann, planetary and lunar cycles, price-time geometry, and the development of software that allows these ideas to be calculated, projected, and tested against actual market behavior. His objective is to approach unconventional timing concepts with the same discipline he has applied throughout his engineering and systems work: define the inputs, state the rules, program the calculations, and test the results.

STOP FORCING THE TRADE

How to Transition from Chart Chaser to Patient Setup Sniper

by Steve Wheeler

Founder and CEO of NaviTrader.com (www.navitrader.com)

Professional Trader and System Designer/Developer

<https://www.navitrader.com>

Introduction

Let me start by introducing myself. I am a full-time trader, trainer, software developer and author in the futures markets. I run a real time Live Market Trader-Training Room to help Traders improve their skills. I have traded for over 30 years, and have concentrated primarily on futures and forex trading as well as building my stock portfolio. I am a pilot, so I see many similarities between flying and trading. Number one, the main objective first and foremost is to stay alive as a pilot and keep your trading account alive as a trader. In my previous career, I was a practicing C.P.A. in the state of Florida.

For those who are reading this document, you are already aware of the potential rewards and risks of futures and stock trading. In order to prepare yourself for the trading challenge, you must develop your knowledge and skills as well as have the best trading tools to assist you. When you are able to put together tools that are easy to use and understand along with dedicated trading practice to build your skills as well as an educated and disciplined approach, you will be closer to mastering your strategy for trading.

ARE YOU TRADING THE MARKET OR CHASING THE CHART?

The Market Creates Endless Temptation

Chart chasing rarely begins with a trader deliberately deciding to abandon discipline. It usually begins gradually. You see a move you missed. Then another. You start thinking about the profits you could have made. The next time the market starts moving, you decide you are not going to let it happen again. You enter earlier. Then even earlier. Eventually, instead of waiting for confirmation, you begin anticipating it. Instead of waiting for price to reach your preferred area, you enter because it is "close enough." Instead of letting the setup come to you, you begin chasing the setup.

Warning Signs of a Chart Chaser

Ask yourself whether any of these behaviors sound familiar:

- You frequently enter after a large price move has already occurred.
- You feel uncomfortable watching the market move without having a position.
- You change your setup criteria during the session.
- You enter because you are afraid the market will leave without you.
- You take trades in the middle of nowhere simply because momentum looks strong.
- You enter before confirmation because you want a "better price."
- You increase your trading activity after missing a good move.
- You feel that a session with no trades is somehow a wasted day.
- You continually jump between long and short ideas as the market moves.
- You explain questionable trades by saying, "It just looked like it was going."

None of these automatically means someone is a poor trader.

They indicate something much more critical:

The decision process may have shifted from planned trading to reactive trading.

The emotional pressure to enter is rising at exactly the same time that the quality of the entry may be declining.

That is why learning not to chase is not simply a psychological exercise.

It is a practical trading skill.

THE MORE URGENT A TRADE FEELS, THE MORE IMPORTANT IT MAY BE TO SLOW DOWN AND CHECK YOUR RULES.

It is important to remember:

Missing a Trade Is Different From Losing Money!

There is a major difference. A missed trade did not remove money from your account. You simply did not participate. One of the great advantages of active futures markets is that opportunities continue to develop. Your job is not to capture all of them.

THINK LIKE A SNIPER, NOT A CHASER

A sniper studies the environment. Looks for evidence. Understands patterns. Waits. And acts when conditions become favorable. A futures trader can adopt the same mindset.

A Chart Chaser sees a move with strength and lets his emotions lead him into jumping into a trade, without a defined plan.

A Setup Sniper has a defined plan. The Setup Sniper trader is no longer trying to predict or second-guess every tick. The trader has defined a sequence of conditions.

A Setup Sniper builds his setup before the Market gets exciting. One of the worst times to decide what constitutes a good setup is while the market is exploding in one direction. When emotion is involved, urgency has increased. Your judgment can become influenced by the price movement directly in front of you. It is much better to define your setups before the trading session.

The Setup Sniper must define the rules for true potential trades that are the strong opportunities. Below are areas needed for defining:

1. Market Direction

Is the dominant short-term trend bullish, bearish, or neutral? Are you trading with the larger movement or attempting to trade against it?

2. Momentum

Is momentum strengthening or weakening? Are buyers or sellers actually demonstrating control?

3. Location

Is price interacting with an area that matters? Previous highs or lows? A breakout area? A pullback zone? An area where price previously reacted?

4. Pattern or Setup

Has the specific setup you trade actually appeared? A pullback? Breakout? Reversal? Continuation pattern?

5. Confirmation

Is there evidence that the setup is beginning to work before you enter? What are the correlated markets doing and are they still in harmony with this trade?

See the example below:

6. Risk

Where does the trade become invalid? Do you have your protective stop in place to keep the trade within your risk rules? If you have multiple contracts in the trade, at what point do you begin to take some profit?

There may be moments when the market moves too quickly for a trader to calmly evaluate every possibility. This is why risk decisions must be made before the trade is entered.

Before taking any position, a trader should know:

- Where the trade is invalidated.
- How much money is at risk.
- Whether the position size is appropriate.
- How the trade will be exited.
- What will happen if volatility suddenly expands.
- Whether a stop order is already working in the market.
- Whether the potential loss fits within the daily loss limit.

The time to prepare for an unexpected move is not after it begins. The preparation must take place before the order is submitted.

The goal is not to predict every unexpected move. That is impossible. The goal is to structure every trade so that one unexpected move does not cause devastating damage.

Another important way to assist you with Risk Management is to have charts that provide you with Automatic Trailing Stops built into your charts. Below is an example of charts that allow you to automatically move your stop placement to help you let your winners run while protecting your profits. These are benefits that you get with the NaviTrader charts.

Strategy Competence

Can you recognize your setup in real time? Do you know when not to take it? Have you observed how the setup performs in trending, ranging, volatile, and quiet markets?

Process Competence

Can you follow the same routine for several weeks? Can you document every trade? Can you review your performance without changing strategies every few days?

The Setup Sniper does not need to negotiate. The setup either meets the criteria or it doesn't.

PATIENCE BECOMES MUCH EASIER WHEN YOU KNOW EXACTLY WHAT YOU ARE WAITING FOR.

HOW TO CLASSIFY YOUR SETUPS

An A-quality setup might have nearly everything you want:

- Clear directional bias
- Strong supporting momentum
- Good location
- Recognizable setup
- Confirmation
- Acceptable risk
- Room for the market to move

You must have a set of rules and follow them consistently.

The rules should be clear enough that the trader can determine whether a trade is valid without inventing exceptions.

Consistency is critical because no strategy wins every time. A trader cannot accurately evaluate a method if the rules are constantly changing.

That is how a trading process becomes repeatable.

USING A TRADING PLATFORM WITH RULES BUILT-IN

A professional trader needs professional tools.

Your trading platform is the control center through which you analyze the market, place orders, manage risk, monitor positions, and review your performance.

A platform that is confusing, unstable, poorly configured, or lacking essential features can create unnecessary risk.

Professional Trading Software such as the NaviTrader Charts provide traders with charting software that has a disciplined trading process built-in which is designed to make decision-making easier. The charts are clear and readable. Important information is visible without unnecessary clutter. The charts are constructed to be visual and have the system built into the charts.

Below is an example of the charts:

**2 Charts during the Same
Time Frame - 1 has Clarity
and
the Other is Confusing:**

FINAL THOUGHTS

Platform clarity creates confidence, but it also creates safety. Having a charting system that is clear, visual and uncluttered with rules built-in provides for better decisions that are guided by rules.

There is an important psychological benefit to having this powerful support from your trading charts. That is where professional trading begins.

Thank You and Let Us Know if You Have Any Questions

We are happy to help you with your trading. We have been helping traders all over the world for the last 24 years. We provide our members with unlimited support and training to always be there if you have a question. Please let us know if you need any help in developing your approach to profitable trading.

Timing Solution

Forecasts the Markets **Instantly!**

Timing Solution generates projection lines based on fixed cycles, astronomical cycles and other types of models.

The software considers models that deal with natural cycles, cycles that are based on celestial bodies' movement.

The program analyzes tens of thousands of different planetary lines.

The Universal Language of Events module allows you to create more advanced models analyzing everything that occurs in time and researching the effects of these phenomena on the stock market.

- ⊗ You can ask the program to reveal the most powerful cycles for your financial instrument.
- ⊗ Special algorithm that reveals the freshest/newly appeared/strongest cycles.
- ⊗ The program analyses all turning points, provides their statistical analysis and displays the most probable support/resistance levels.
- ⊗ Charting Tools, Fibonacci levels, Pitchforks, Gann Angles and many other traditional charting tools are available.

WD GANN ASTRO COURSE AND CHARTS

DK Burton

When you study his 1952 Astro Course (printed in 2025), and study the 30 charts that come with it—which actually weren't with the course but were his own private charts that the public has never seen before—you will understand that really no one in the world knows what this man was doing exactly.

There are no Gann experts in the world and there was only one Gann. He didn't publish all his secrets, but over 45 years I have collected all the available information and developed nine helio-centric average and nine geo-centric average charts, by using highs and lows. Many other charts could be used—such as those for eclipses, for periodic ingresses, for new and full moons, for anniversary date returns from highs and lows—who knows. It's for you to study full time, but first you do need to understand the basics of trading using medium term swings.

You should study the Astro Course if you have never traded, in order to understand all his overlays and so: that is, you must crawl before you can walk.

In the table below, I've listed planetary helio-centric points for 18 September 2026, and for each month going forward, up to 1 March 2027.

53											
54											
55	Helio	DATE	Earth	Mercury	Venus	Mars	Jupiter	Saturn	Uranus	Neptune	Pluto
56											
57											
58											
59											
60											
61	JAY	18-September-2026	354.7	230.37	332.57	78.92	130.43	10.72	62.87	2.94	304.52
62											
63											
64											
65											
66	1	1 June 2026	250.14	153.71	158.57	17.95	121.66	7	61.62	2.28	304.02
67	2	1 July 2026	278.81	255.44	207.1	35.82	124.09	8.02	61.97	2.46	304.16
68	3	1 August 2026	308.39	359.31	256.61	53.43	126.58	9.08	62.32	2.65	304.3
69	4	1 September 2026	338.19	172.04	305.67	70.13	129.07	10.14	62.68	2.84	304.44
70	5	1 October 2026	7.43	266.53	353.19	85.48	131.47	11.16	63.02	3.02	304.58
71	6	1 November 2026	38.16	19.59	42.64	100.6	133.94	12.22	63.38	3.21	304.72
72	7	1 December 2026	68.37	184.35	90.9	114.64	136.32	13.25	63.72	3.39	304.86
73	8	1 January 2027	99.9	277.83	141.18	128.68	138.77	14.32	64.08	3.58	305
74	9	1 February 2027	131.46	42.29	191.46	142.41	141.22	15.39	64.44	3.77	305.14
75	10	1 March 2027	159.75	192.01	236.4	154.66	143.41	16.35	64.76	3.94	305.27
76	11										

Tabled below are the 9 different averages I have used—which have been gathered from all his courses, letters and other personal ephemeria over the period 1941–1950. I haven't revealed what these are, as you must do your own work—which is the Gann way. You will never appreciate Gann's work if it's free—you simply must put your own time into it—which is why he coded his material and never taught the higher courses unless the student had already completed the previous, preparatory courses. He never sold a student a course until he thought they could

make use of it and succeed. Natural laws make it clear that some just aren't meant to have the Gann knowledge.

[illegible]

Below is a picture of Gann's actual cotton moon chart up until he died (this is included in the Astro Course charts). You can see on this chart that he squared the moon chart (number 340 written on the chart) and applied sun lines through it.

Why was Gann doing all these charts, you are probably asking? It's because when you have a position (but not day trading) you have plenty of time on your hand, so he was studying and researching—not to make more but wanting to know how natural laws worked; actually, he always said "I have more money than I can spend". He was trading back in 1908, so he researched / studied as if it were a hobby, I guess, but actually in support of his number two rule, which was KNOWLEDGE, after his number one rule, HEALTH.

This is my Gann program with a 10-day chart and 3-coloured bars (so every third bar is a month). The moon chart above it is 2.5 days—so 10 days is 4 moon days in the chart; this is how Gann also explained the 2- and 3-day charts, as are also discussed in my program, as is the key square of 24 (like the circle), extending from the September 1927 high in cotton from Gann's TTTTA book. You can actually see at the bottom '(9) 348', where 9 refers to $\times 360$ bars—although in this case it's 10 days $\times 360$, plus the number 348, taken from the 8 September 1927 high.

Gann always used 3, so the bars are coloured in 3s, as are the squares.

Below is Gann's Mars cotton chart, which is close to 58 days per sign. This is a close match to my 2-month chart developed using the 12-month coloured bars, as below. You can add time counts, Gann angles, and so on.

The Bronze program, which is USD180 / year plus any third-party data costs, has all this. The Silver version has all of this, plus application of the square of 144 and the forecast tool to read daily bars and help with trend identification—and costs USD360 annually.

You can get all these through www.wdgannt trader.com and all courses and books are available through the books link.

Gann and I did all this by hand, you have it easy today

How Market Cycles Identified the Late-July Dollar Turn and Other Market Reversals

By Andrew Pancholi, Creator of *The Market Timing Report*

On 18th June 2026, after the Foundation for the Study of Cycles conference in New York, we released a document called "Three Major Turning Points."

This originally went out to the 120 people who attended the conference – an event attended by such market legends as John and Zoe Bollinger, Christopher Carolan, Sherman and Tom McClellan, Robert and Elliott Prechter, Jake Bernstein and Larry Williams, just to name a few.

The aim of this exercise was to show how cycles can identify future market turning points and, in so doing, give traders and investors, both professional and private, distinct advantages in preparing for forthcoming opportunities that other people only react to.

In a moment, we will take a look at these forecasts and see how they performed.

More importantly, by the end of this article you will also have the opportunity to download the latest report with the three major turning points coming up over the next few weeks and months.

You will be able to see for yourself whether this works or not.

These forecasts are based on our proprietary cycles systems. Underneath each chart is a series of histograms. These histograms do not represent trading volume.

Where you see these histograms peak, it means that many cycles are coming together and this usually suggests a trend change.

Most importantly, these points are known in advance. We therefore have a distinct advantage by knowing when to protect open positions.

Here is the June report forecast.

Let's begin with Turning Point Number One.

TURN 01
Week Ending
31 Jul
2026

Dollar Index & Currencies

Several intermediate and longer-term cycle structures are converging into the latter part of July 2026 on the Dollar Index. By inference, this time cycle will also impact numerous currencies. The timing window itself is attracting our attention regardless of the narrative that ultimately emerges.

Image: Major time cycles coming together on Dollar Index and other currencies as show on a weekly chart.

Here is what happened.

Finding the window before the headlines

We had first identified the late-July window during our work last year, when the weekly cycle structures began drawing attention to the same period. That gave us a future point around which to organise our research. It did not require us to know the news story that would eventually accompany the move.

That distinction matters. The June Market Timing Report, published on 20th May, had already identified the week of potential change. As the market approached it, the July Market Timing Report, published on 24th June 2026, provided the shorter-term detail. Its Dollar Index analysis described the weekly cycle as strong and identified 27th–28th July as the daily Profit Finding Oracle dates coinciding with it.

The EUR/USD section independently highlighted the same daily window within a strong weekly cycle showing across numerous currencies. We were therefore watching a coordinated currency turning period, rather than an isolated date on one chart. A rising dollar entering that window raised the possibility of a high, while falling currencies against it raised the possibility of lows.

A major top came in.

This was also confirmed by the fact that our Smart Money Platform was warning us that a bearish reversal was coming in during the same time period.

Look to the right and you will see a yellow box.

Our green index line was hitting zero and this put us on alert for a potential sell-off.

The green line shows us what the smart money is doing. Look at the two yellow circles on the red line. They were at extreme levels of selling, again confirming direction.

We now have time and market direction coming together.

Furthermore, our Advanced Seasonality Platform shows that over the last 39 years, the Dollar Index tends to make highs in July, albeit towards the beginning of the month.

Our histogram timing system prevented you from getting in too early.

This is how we combine several independent factors before a timing window matters.

That same June 2026 report highlighted two other setups.

Here is the second case study, this time on Bitcoin.

TURN 02
Week Ending
21 Aug
2026

Bitcoin

This is the weekly chart of Bitcoin. Be prepared for a reversal in Bitcoin as we approach this time window. Some people ask if this will be a high or a low. At this time of writing, we do not know. However, as we approach this window we will know the predominant trend. This trend will be at risk as we approach the time window so we can be prepared for a reversal, regardless of the direction.

Image: Example of a major weekly histogram forecast identifying a significant turning point in cryptocurrency.

Here is what happened.

Here is how readers of the Market Timing Report were forewarned. This was published on 27th July 2026.

INVESTORS: Bitcoin has a major monthly cycle in August. There are important weekly cycles weeks ending 21st and 28th August. This suggests a major turn in the latter part of the month.

Key turning point dates derived from PFO Histograms:

- 4th to 5th August
- 17th to 18th August - ties in with weekly cycle
- 26th to 27th August - ties in with weekly cycle

The fact that Bitcoin had a major monthly cycle in August alerted traders to a significant trend change.

The weekly cycle showed the key week and, within that key week, readers were given the dates of 17th to 18th August.

If you add this to your trading system—or, if you don't have one, use the Market Timing Report Trading Course—you can put the odds on your side.

The third case study involved soybeans.

Image: Example of a major histogram forecast identifying a significant turning point in soybeans.

This is an example from our Grain Reports.

Here is what happened.

Would this information be useful to you?

How would this improve your results?

Preparing for the next three turning points

Everything above has already happened. The more useful question is... *“what comes next?”*

Andrew has put together a report covering the 3 major turning windows directly ahead—the markets involved, the timing windows themselves, the evidence behind each one, and a review of how the previous turns resolved.

He is making these reports available to Traders World readers as a **gift**. There is nothing to buy and nothing to subscribe to.

To receive Three Major Turning Points Ahead, visit markettimingreport.com/vip and enter your email address.

The aim is simple: to put the next important dates in your hands while there is still time to prepare.

Transparency: This article is educational analysis, not investment advice. Forecasts are uncertain, and past results do not guarantee future outcomes.

ABOUT THE AUTHOR

Andrew Pancholi

Andrew Pancholi is the Founder and CEO of Cycles Analysis Limited, publishers of The Market Timing Report. He is also a market-cycle analyst for 40 years, investor, author and Board Member of the Foundation for the Study of Cycles.

For more than 30 years he has researched the recurring patterns that drive financial markets, commodities, economies, and geopolitical events, combining proprietary forecasting models with historical cycle analysis, seasonality research, Commitment of Traders data, and catalogued the original work of W.D. Gann.

His work is known for forecasting the 2020 market decline ahead of the COVID crash, identifying the 2022 equity market peak, anticipating major commodity turning points, and projecting the February 2025 peak in US equities.

Andrew is the co-author of the bestselling book *Zero Hour*. Drawing on more than 39 years in commercial aviation, including service as a Boeing 777 Training Standards Captain, he

SEASONALITY IS MEASURABLE. NOW IT'S MAPPED

Election Time-know the future trend in SPX

Rick Versteeg — October 8th, 2026

TRADING TIMEWAVES

Results are OFF THE CHART

Trading 1 future ES-or 10MES. Running result now in 2026 at 77k. Around 70% hit ratio, low drawdown. See tradingview screenshot below from October 26.

Timewavetrading.com

Traders, do you realize the incredible unfair advantage of knowing the future price trend in advance? Trying it out is the best verification.

The upcoming Midterm elections are an opportunity to test the value of the short term trends indicated by our proprietary Timewaves indicator. Purely based on time, not using any price movement in the SPX. Nevertheless, the energy Timewaves indicator shows, calculated for the future, is mostly similar with the price development in the SPX. It's a fascinating story and journey to develop a model using fully quantitative algorithms to predict markets as good as timewaves does. Already in 2016 we indicated, based upon our time model, a surprise election outcome president election. Now, writing this article before it happens, **we show you exactly what our Timewaves indicator has in store for the markets until around mid November. The future in a screenshot.** Put it on your desk and compare. Past and simulated results don't guarantee future results, and this is not investment advice.

Expected trends of Timewaves are visible in the screenshot of our proprietary software analysis. Timewaves screenshot shows the trends up and down from 19 October till 12 november. Spx is expected to follow especially strong moves in the indicator. Consequently, if the red line goes up and above zero from October 26th to 28th, SPX is expected to show similar up trend during these days. Also after election day, again an up trend on 4th of November and even stronger on 9 till 12 November. Let's just wait and see if the SPX index delivers up trends around the same time. Please note that the down trend in the indicator happens in the weekend of 10/24-25.

Results of Timewaves trading from January 2026 until beginning of October:

Trading system is running in Tradingview fully automatically using API of IB, trading 10 MES. Trading is at your risk, educational purpose only if applicable. Started as a strategy test in 2023. past and simulated results don't guarantee future results, and this is not investment advice.

Prediction Midterm elections 2026- leading Timewaves indicator

PATTERNS OF ELECTIONS

Vote	Outcome	SPX after 2 weeks
2016 Presidential	R sweep	+5.4%
2018 Midterms	D win house +41	+2.5%
2020 Presidential	D wins	+11.4%*
2022 Midterms	R win house	+5.4%
2024 Presidential	R sweep	+4.5%

The chart of Timewaves predictions above shows the trends the leading indicator projects around the November 3rd election and afterward. The steep initial decline on October 24–25 is unlikely to have much effect because it occurs over the weekend. The subsequent sharp rise through October 29, however, should support SPX prices strongly.

This may signal an unexpected positive event that benefits the incumbent party. If it occurs shortly before Election Day, it could produce an exception to the usual pattern. Trump being unpredictable could have a surprise, like maybe an Iran deal or better. However, Incumbent parties generally lose seats in midterm elections; the notable exception was 2002 (and 1998), when Bush's party gained seats amid the war on terrorism following 9/11.

The indicator rises sharply from November 4, suggesting an upward trend in the SPX. An even stronger rise is indicated by imewaves, looking at its top on November 12. Markets generally favor political stability, and several outcomes could produce it. For example, if Democrats regain the House, political gridlock could limit major policy changes and create the stable environment markets often prefer. By contrast, if Democrats win both the House and Senate, that will not normally support a new strong upward trend; in my view, it could increase uncertainty and unsettle markets near all-time highs because of insecurity. An example of insecurity is the 2016 election outcome, triggering a 5% panic-driven gap decline in SPX, but the market soon recovered. Similarly, a Republican gain—or continued Republican control—could reassure investors by preserving policy continuity and limiting reversals. Stability could support higher stock prices. Interesting, but in the end Timewaves foresees strength in the markets, which could be for some other reason. Most important in our work is if the predicted trends will be correct, not why. The same holds for our short-term, active trading strategy, if we trade direction of trends correctly, we make a very good profit. It's that simple.

2024 presidential election Republican sweep win.

Trading Systems Based on Planets and Harmonics

By Allen Reminick

Trading Systems Based on Planets and Harmonics

To create a profitable trading system, we consider planetary influences on S&P futures back to 1997, including the primary players that could create meaningful trends.

All of this is based on the sidereal zodiac, which is different from the Western astrology tropical zodiac. The sidereal zodiac is approximately 24 degrees later than the tropical zodiac and increasing every year.

PLANETS

The Moon is the fastest-moving planet, and oftentimes creates shorter-term swings. However, the Moon also interacts with other planets each month — conjunct, opposite, etc. — which complicates the creation of a trading system.

Because other planets -- like the Sun, Venus, and Mars -- move slower, it is easier to identify trading systems with them.

Sun Trading System:

The Sun goes through the sidereal zodiac once per year, which creates the calendar and the standard market Seasonal Patterns.

One reliable Sun cycle is well known: BUY on October 28th every year, and EXIT around April 24th (when the sun is exactly opposite, 180 degrees further along).

This produced a profitable strategy over the last 30 years. The statistics are rather good. The Sun system wins about 79% of the time. There are drawdowns in the middle of some of the trades, but overall, the strategy works.

The Buy point for the Sun system is 10 degrees Libra (October 28 every year). Vedic astrology considers October 28 to be the weakest point for the Sun, as in its maximum debilitation point.

The Exit point for the Sun system is 10 degrees of Aires, which is April 24 every year, Vedic astrology considers April 24 as its maximum exaltation point. This is like, “Sell in May and walk away.” As proof, the market tends to do significantly better between October and May, than it does between May and October.

Venus Trading System:

Venus also goes through the sidereal zodiac once per year, though not exactly like the Sun because Venus can go Retrograde. This system for Venus is when it goes through Aries, and it seems to produce more profitable results than the Sun system.

BUY when Venus goes into Aires at zero degrees each year. EXIT the trade when Venus gets to zero degrees Libra, 180 degrees away.

Unlike the Sun system, this Venus system is not on the same dates every year, because the time of going through the sign of Aries varies.

Mars System for the Gold market

BUY when Mars gets to 58 degrees of longitude in the sidereal zodiac. EXIT at 180 degrees away, which is 238 degrees of longitude in the sidereal zodiac.

It wins 85% of the time (long positions only) since 2001, if the position is held for about one year.

If you target a \$10,000 profit (a \$100 move in gold), the system won every time since 2001, including the most recent trade. We bought most recently on July 30, when gold was at about \$4,100, and we are still in that trade.

HARMONICS

Harmonics in Western astrology are called Vargas in Vedic astrology. There are at least 16 harmonics or Vargas of different sizes, with different Vedic names. The Vargas or Harmonics are divisions of halves, thirds, quarters, etc., of the 360-degree zodiac. When a planet goes into the beginning of the zodiac, it is at zero degrees.

In this article, we will use both Vedic terms and the Western term of harmonics.

When used in our trading systems, not all of the Vargas or Harmonics create equal profits. The Nakshatra Varga, which is $1/27^{\text{th}}$ of the zodiac in Western terms, is one of the most profitable.

Nakshatra or $1/27^{\text{th}}$ Harmonic

The first Nakshatra starts at zero degrees of the zodiac, and ends at 13 degrees and 20 minutes. The next ends at 26 degrees and 40 minutes (the next $1/27^{\text{th}}$ of the zodiac, in Western terms), and the next ends at 40 degrees (the next $1/27^{\text{th}}$ of the zodiac, in Western terms), etc.

The Nakshatra System (long only): BUY each time a planet enters a new Nakshatra. Then EXIT when the planet gets halfway through the Nakshatra.

Venus Example:

BUY every time S&P goes into a new 27th division, EXIT halfway through that Nakshatra. The system wins about a two-thirds of the time. Over the last 10 years, this Venus Nakshatra system on the S&P made more than \$247,000, on one contract.

This Venus Nakshatra System makes more money than the other planet Nakshatra systems, with reasonable drawdown. For example, a \$29,000 maximum drawdown in the midst of a \$247,000 profit. Even over 15 to 20 years, the Venus Nakshatra System outperforms the other planets.

If you go for a specific profit objective, it is possible to produce more profit, with less drawdown.

Mercury Example:

Mercury is the ruler of the May 17, 1792, chart for the New York Stock Exchange. That chart is Gemini rising and ruled by Mercury. Thus, Mercury is a very important planet for the New York Stock Exchange.

Using the same Nakshatra approach, BUY at the beginning of Mercury going into a new Nakshatra and EXIT at the half-way point. This made \$104,525, with \$40,212 drawdown.

Synodic Cycles

We have been using individual planets as they move around the zodiac, with an additional emphasis on the harmonic divisions. However, you can also extend this concept of Astro-Trading Systems to PAIRS of planets, as well.

The most successful pair that works very well in S&P futures, back to 1997, is when the Sun approaches Rahu at a certain angle.

BUY when the Sun is at 39 degrees before Rahu. EXIT when the Sun is at 39 degrees before Ketu.

The results for this system are extremely good. Since 1997, it made making \$301,000 on one contract, was 83% accurate, with a closed trade-to-trade drawdown of a maximum \$14,000. Also, if you look at the last several years on the S&P chart, it was hitting the important lows the last two years in a row.

These are just two examples. There are many others. And it is worth thinking about astrology in a practical way, if you have empirical information

Always use good risk management, because some of these systems have fairly big swings in the middle. But trading with options is a viable way to handle the swings, if you need.

Trading Systems Based on Planets and Harmonics

To create a profitable trading system, we consider planetary influences on S&P futures back to 1997, including the primary players that could create meaningful trends.

All of this is based on the sidereal zodiac, which is different from the Western astrology tropical zodiac. The sidereal zodiac is approximately 24 degrees later than the tropical zodiac and increasing every year.

PLANETS

The Moon is the fastest-moving planet, and oftentimes creates shorter-term swings. However, the Moon also interacts with other planets each month — conjunct, opposite, etc. — which complicates the creation of a trading system.

Because other planets -- like the Sun, Venus, and Mars -- move slower, it is easier to identify trading systems with them.

Sun Trading System:

The Sun goes through the sidereal zodiac once per year, which creates the calendar and the standard market Seasonal Patterns.

One reliable Sun cycle is well known: BUY on October 28th every year, and EXIT around April 24th (when the sun is exactly opposite, 180 degrees further along).

This produced a profitable strategy over the last 30 years. The statistics are rather good. The Sun system wins about 79% of the time. There are drawdowns in the middle of some of the trades, but overall, the strategy works.

The Buy point for the Sun system is 10 degrees Libra (October 28 every year). Vedic astrology considers October 28 to be the weakest point for the Sun, as in its maximum debilitation point.

Amazon Kindle Books

ASSET REVESTING: HOW TO EXCLUSIVELY HOLD ASSETS RISING IN VALUE, PROFIT DURING BEAR MARKETS, AND CONTINUE BUILDING WEALTH IN RETIREMENT Hardcover \$19.99

ASSET REVESTING is a ground-breaking book that reveals a revolutionary investment style the outdated financial industry does not want you to discover. The author, a seasoned financial expert, shows how using an asset hierarchy and deploying both risk and position management redefines how to build wealth. Asset Revesting solves several financial industry problems most people don't even know they have.

This book shows a different way to invest. It sheds new light on the investing world's hidden realities, risks, and unknown opportunities. It is a must-read for all investors, especially those using a diversified buy-and-hold portfolio. The content will alter your thinking and improve your outlook on investing and life.

IF YOU'RE AN INVESTOR, YOU PROBABLY HAVE THREE CHALLENGES:

- You want higher returns with less stress and lower risk.
- You want to reach your financial goals faster.
- You are worried you will run out of money in retirement.

ASSET REVESTING CAN SOLVE ALL THREE OF THE CHALLENGES ABOVE:

- Increase returns by holding only assets rising.
- Achieve your financial goals in years vs. decades.
- Become wealthier vs. poorer in retirement.

This overview of Asset Revesting is the first step toward total financial freedom. It's important to note that you won't find technical analysis or detailed step-by-step strategies here. Instead, you will learn what needs to be changed and how to harness this investing style, either on your own or with the author's help. This strategy is most efficient with investment accounts in the \$100K - \$5M range.

The book's approach tends to irk most financial industry professionals and is not for short-term aggressive traders. These folks, though curious to learn, will dislike any method that breaks free from the 'norm' and threatens their foundation. They may even attempt to discredit the book's content to calm the waters. But don't be fooled because, in doing so, their pushback supports the fact that Asset Revesting has merit and can begin the process of change that the financial industry (and potentially your savings) desperately needs.

Gann Masters Course by Larry Jacobs \$14.95

<https://amzn.to/3yrF5fF>

As you know, W.D. Gann was a legendary trader. Some say he amassed a fortune in the the markets. He wrote several important books on trading as well as a commodity trading course and a stock market trading course. He charged \$3000 to \$5000 for the trading courses which included 6 months of personal instruction by phone. The Gann Masters Trading Course to help traders.

Patterns and Ellipses by Larry Jacobs \$9.99

<https://amzn.to/3yqAWZ9>

This book concerns itself with a highly technical subject, the subject of technical analysis of the financial market. This book specifically deals with ellipses and pattern formations used for trading the markets. It also covers many other technical analysis tools that can be used effectively by the trader.

Gann's Master Charts Unveiled by Larry Jacobs \$14.95

<https://amzn.to/3uzOgJC>

We know that Gann used the Pythagorean Square because he was found carrying it with him into the trading pit all the time. This square was hidden in the palm of his hand. How did he use this square? Why did he not discuss the use of this square in his courses? There is only one page covering the Square of Nine in all of his books and courses. Was this square his most valuable tool? These and all the other squares Gann used will be discussed in detail in this book with many illustns and examples to prove how they work.

Gann Trade Real Time by Larry Jacobs \$14.99

<https://amzn.to/3yNRPhT>

When you opened this book you took the one step that will help you learn how to be successful at the most desirable, but hardest profession in the world. That profession is real time trading. This book is not going to give you an instant secret to day trading. It is going to give you the basics so that you might start the path to understanding how the markets work both short term and long term. You need to know and fully understand the markets and develop successful trading strategies to become successful at this endeavor.

Finding Your Trading Method \$3.99

<https://amzn.to/3NU5HeL>

Finding your trading method is the main problem you need to solve if you want to become a successful trader. You may be asking yourself, can I find my own trading method that will reflect my own personality toward trading? For example, do you have the patience to sit in front of a computer and trade all day? Do you prefer to swing trade from 3-5 days or do you like to hold positions for weeks and even months? Every trader is different. You need to find your own trading method.

Finding out your trading method is extremely important to produce a profitable benchmark that can be replicated in your live account. Perhaps the best way to find a successful trading method is to listen to many expert traders to understand what they have done to be successful. The best way to do that is to listen to the Traders World Online Expos presentations. This book duplicates what these experts have said in their presentations, which explains what they have done to find their own trading method.

If you have a trading method that gives you a predictable profit, then that type of objectivity contributes to your trading edge. The problem with most traders is that being inconsistent will never allow them to have an edge. After you find your trading method that you feel comfortable with, you must have the following:

An overall plan to:

- 1) Set your rule set and plan and then stick with it in all of your trading.
- 2) To give you a trading plan for every day.

The trade plan then should:

- 1) Have an exact entry price
- 2) Have a stop price
- 3) Have a way to add positions
- 4) Tell you where to take profits
- 5) Have a way to protect your profits

By reviewing all the methods given in this book by the expert traders, it will give, you the preliminary steps that you need to find your footing in finding your own trading method.

Reading this book and by seeing the actual recorded presentations on the Traders World Online Expo site can act as a reference tool for selecting your method of trading, investment strategies and tactics.

It took many of these expert traders in this book 15 – 30 years to finally come up and find the answers to find their trading method to make consistent profit. Finding your trading method could be then much easier when you read this book and incorporate the techniques that best fit your personality and style from these traders. This book will enable you to that fastest way to do that.

So if you want help to find your own trading method to be successful in the markets then buy and read this book.

Takumaru Forex Trading \$4.99

<https://amzn.to/3anhe8I>

This book contains an interview in Chapter 1 with Takumaru Sakakibara, who finished in 2nd place in the 2014 World Cup Championship of Forex Trading® with a 122.6% net profit. "Takumaru's largest drawdown (cumulative peak-to-valley percentage decline in month-end net equity during the life of the account) was -21.5% from 6-30-15 to 10-31-15."

"Please remember that past performance is not necessarily indicative of future results."

"Please remember that Forex trading involves substantial risk of loss, and past performance is not necessarily indicative of future results."

In the rest of the book I will explain to you some of the trading ideas Takumaru said he used in the championship. You can then actually see and understand how his ideas work.

I am not going to tell you exactly how Takumaru used the ideas to make his return of 122.6% on a \$10,000 investment. That information is not public and belongs only to Takumaru.

I will tell you which indicators he used and help you understand how these indicators work.
