THE TEXTBOOK OF GANN ANALYSIS...

THE PATH OF LEAST RESISTANCE

THE UNDERLYING WISDOM & PHILOSOPHY OF W. D. GANN ELEGANTLY ENCODED IN THE MASTER CHARTS

BY DANIEL T. FERRERA

MOST DETAILED COURSE ON GANN'S MATHEMATICAL & GEOMETRICAL TOOLS!

"WE USE THE SQUARE OF ODD AND EVEN NUMBERS TO GET NOT ONLY THE PROOF OF MARKET MOVEMENTS, BUT THE CAUSE." - - - W.D. GANN

- **How to square the natural whole numbers (odd and even), along with their midpoints.**
- **How to define prices scales by "The Basis of Money"**
- **How to set the proper scale, and use the 1x1 angle to square or balance price with time.**
- **How the natural squares (even & odd) sub-cycle would not be possible without understanding the Spiral chart (Square of 9).... expressing the square root as an "inner square" time period.**
- **How to assimilate all of these elements together as a sequential methodology once the "basis of Gann's forecasting method" has been worked out.**
- **How Gann's price squaring techniques and master charts are NOT completely separate and independent methods, but are tied together thru geometric angles.**
- **How the inner square root sub cycle & natural squares of numbers reveals unique market turns.**

INTENT OF THIS GANN COURSE

The intent of Ferrera's new course is to provide the most comprehensive elaboration of W.D. Gann's most powerful technical trading tools. It presents all of Gann's foundational mathematical and geometrical techniques expressed in his master calculators, angles, trend channels, squaring processes, pattern formations, spiral charts and much more, leading to the clear identification of profitable Trade Setups, important trend indications, and critical price/time culminations.

The material further elaborates a number of Gann's most advanced geometrical tools and applications, such as the natural squares (even & odd) sub-cycle and the square root as an "inner square" time period, . It provides both practical and actionable trading signals and a valuable structural perspective to any market on any time frame.

With 300 pages of detailed text, over 150 charts and diagrams, and 190 pages of the rarest Gann's supplementary material, we consider this 500 page treatise to be THE TEXTBOOK on Gann's geometrical techniques that no serious Gann analyst can be without!

FERRERA'S NEW COURSE—THE ART OF THE TRADE

W. D. GANN'S SYSTEM OF CHART READING & PATTERN TRADING

Dan Ferrera's new trading course, ***The Art of the Trade***, provides thorough instruction in W.D. Gann's key trading methodology, **Pattern Trading**. It teaches **"Chart Reading"** the way Gann himself did it, demonstrating how to trade the fundamental market patterns identified by Gann. This strategic approach to trading provides advantages that allow the trader to react to the markets in real-time, without indicator lag. Pattern Trading eliminates lagging mechanical indicators, which are always based on what the market did in the past and not the present. This style of "Form-Reading," as Gann called it, allows one to make decisions in real time, as the opportunities develop on the chart.

The course provides a clear set of rules for reading these market patterns to determine entry, exit, risk management, and trade management as determined by the recognition of a set of fundamental market patterns identified by Gann. This approach differs from Gann's mechanical swing indicators and from his long-pull position trading, providing a different perspective and alternative trading style, that most often used by Gann himself. The technique is equally effective on any time frame, so is as valuable for day-traders as it is for daily traders. It also generates a larger number of trades than his other trading methods.

Article by Daniele Prandelli – www.iaminwallstreet.com

Buy in March 2020: I said

By Daniele Prandelli

How I said that March 2020 was a buy opportunity for Stocks, 11 years in advance… I can prove it because I wrote it in a book… Today, I show this study to you… You only need to be able to make additions… If you have followed me in the last months, I told you since the beginning that I did not trust the fall…

Again, the same fake story? Nope, and I can prove that! I really did say that March 2020 was a buy opportunity for the S&P500, and I said it 11 years ago. Actually, I did not say it, I wrote it! Today I show you the study that made me call March 2020 as a buy opportunity, and I did it in 2009.

The Proof of My Call

In 2009, I wrote a book/course for Sacred Science Institute, where I mainly spoke about the Gann Planetary Lines, how I use them, and I cover some cycles that I found out after studying Bayer's material. The title of the book is "The Law of Cause and Effect".

In the last chapter of the book, I showed a "work in progress" which was a study that I was investigating at that time. That study offered two counting to forecast potential selling months and buying months. However, as I said in the book, that section was just something to investigate, because I did not know if it was something casual or if there was a real "market law" behind it.

Let me say immediately that I have not been able to develop a precise rule that could help me to rely a solid strategy with that method, and I gave up making more studies, despite this discovery showed me amazing results. Maybe, after I show it to you, you will be able to find out more. There is no doubt that this system called for a buy opportunity in March 2020 for Stocks. It also did call a buy opportunity in April 2010, October 2014, October 2017, and March 2020, as I said. The potential next buy opportunity is in April 2024. The book was written in 2009, and if you check the suggested months where to buy, they have been excellent, except for April 2010, which was not a good buy opportunity. So, in the last 10 years, we have 4 monthly buy opportunities, 3 turned out being correct, and only one was wrong. Two of them hit the Low of important drops.

This is a chart of the last 11 years, where I show the buy-timings of this system:

I will show here how this system is working very nicely since 1970, sharing with you the numerology behind it.

How Does the System Work?

Here is an extract of the Book "The Law of Cause and Effect", chapter 6, titled "MATERIAL FOR STUDY & REFLECTION – A NEW TIME SYSTEM":

> *I intuited that it was possible to create a calculation based on years, intersected by a calculation based on months. The resulting geometries can be applied to either the longest or the shortest Time Frame. I am going to preface the following material by saying that identifying such calculations is a very difficult task and I am still seeking further elaboration of this concept. In short, I am revealing a work in progress.*
>
> *As a further complication, the calculation for the years or months is not based on a harmonic that can be fixed such as 2+2+2+2+2+…. Instead the calculations are based on 2, 3 or 4 different numbers such as (+3+3+4)+(+3+3+4)+(+3+3+4)+…, the actual basis of our cyclical sequence (+3+3+4). As a next step, we will establish a succession of numbers indicating the interval in months until an expected reversal. The reversal may be based, for example on the sequence (10-10-3-4) (10-10-3-4), etc., or said another way, (October, October, March, April). Combined with the previously determined yearly sequence, we now know that the reversals will happen in a particular year in October, the next year in October, then March and lastly April (in the months corresponding to 10-10-3-4). This method has proven to correctly identify significant lows and/or buying opportunities consistently over the past 40 years.*

The following table demonstrates the calculation of the sequence from a starting year of 1970.

S&P500 system	Year x	x0	x1	x2	x3	x4	x5	x6	x7	x8	x9	x10	x11	x12
Daniele Prandelli	1970	1974	1977	1980	1984	1987	1990	1994	1997	2000	2004	2007	2010	2014
year calculation	0	+4	+3	+3	+4	+3	+3	+4	+3	+3	+4	+3	+3	+4
year X	0	x+4	x0+3	x1+3	x2+4	x3+3	x4+3	x5+4	x6+3	x7+3	x8+4	x9+3	x10+3	x11+4
monthly series		10	10	3	4	10	10	3	4	10	10	3	4	10
Result	April	October	October	March	April	October	October	March	April	October	October	March	April	October
	1970	1974	1977	1980	1984	1987	1990	1994	1997	2000	2004	2007	2010	2014

To calculate the years, begin at 1970 and add the repeating sequence +4, +3, +3: +4+3+3+4+3+3+4+3+3+4+3+3+4+3+3, etc. The chart above delineates the years from 1970 to 2014.

To calculate the months, again begin from 1970. The series of months is: April, October, October, March. (Important Note: Inserting the months does not require a calculation! Just repeat the four-beat sequence; April, October, October, March, and repeat.

In the matrix above, 1970 intersects with April, 1974 intersects with October, 1977 with October, 1980 with March, 1984 with April, 1987 with October, 1990 with October, 1993 with March, 1997 with April… and so on.

I let you check how this system worked since 1970. It has been able to hit very important lows that became exceptional timings to buy.

Conclusion

As I said at the beginning, 11 years ago I published a course which included a system that provides potential buy opportunities for the S&P500. After October 2017, the next buy opportunity was in March 2020. Did it work correctly? Absolutely yes! One of the best buy opportunities in stocks ever! The next one will be in April 2024.

This method is strange, I know, but cycles may work in this way too. Our logic is not the same logic of the market. And about this, I am going to show you, in this Post that I titled "March 2020 Panic: How did you react to it?", that I perfectly did forecast the actual scenario, with an incredible new bull market. It was not hard, I just looked at the crowd and I understood that they were all wrong. I did it in advance, as you can read.

TradingWDGann.com/gann-trading-course
(312) 532-2116

THE COMPLETE, ORIGINAL TRADING SYSTEM OF W.D. GANN

GANN SCIENCE

The Periodic Table & The Law of Vibration

THE SOLUTION TO GANN'S LAW OF VIBRATION
AS PRESENTED IN THE TICKER INTERVIEW

By Eric Penicka

ATOMIC ELEMENTS DEFINE MATHEMATICAL STRUCTURE OF MARKETS

HOW EXACTLY DOES THE PERIODIC TABLE OF ELEMENTS DEFINE MARKETS?

This course provides the solution to the Law of Vibration, as Gann originally presented it in his interview with Richard Wyckoff in ***The Ticker and Investment Digest***, in 1909. The author takes Gann's exact words and correlates them with the cutting edge science of Gann's day to demonstrate what Gann meant when he said, **"stocks are like atoms"**. He develops a system which identifies the key "mathematical points of force" that govern the structure behind the market.

The author builds a solid foundation in the Natural Sciences of Gann's day, showing how the emerging science of the **Periodic Table of Atomic Elements provides a system of order based upon the vibrational values of the elements** themselves. When the elemental structure is determined for an individual market, a **Master Number Set** will be defined for that market which determines its movement in price and time forever into the future. **A POWERFUL & HIGHLY PRACTICAL SET OF TRADING TOOLS! 480 Pages w/Forum.**

FOR A MUCH MORE DETAILED WRITE-UP, CONTENTS, SAMPLE CHARTS & ARTICLES SEE:
ERIC PENICKA - MAIN AUTHOR PAGE - GANN SCIENCE - HORSE RACING

A DECODER FOR GANN'S TUNNEL THRU THE AIR

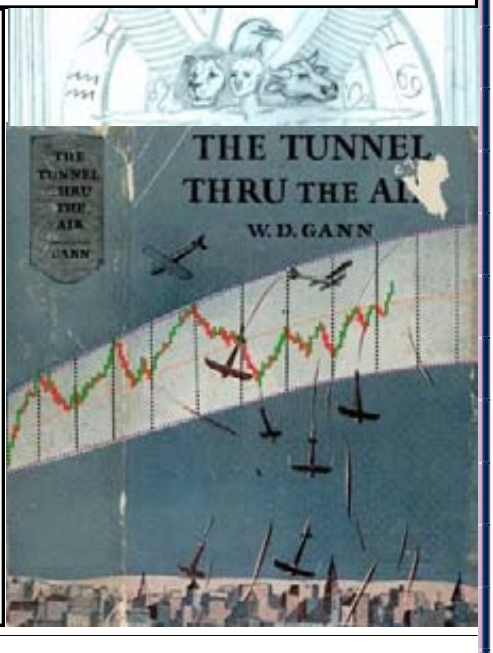

MAGIC WORDS THRU THE ZODIAC

Vol 1 - A Guide to the Work - Vol 2 - The Advanced Findings

Volume 1 introduces the Keys to cracking the complex symbolic code that Gann used to conceal his greatest secrets within Tunnel. It unveils a Masonic Gematria cypher which serves to decrypt references and clues concealed in names, dates and other key words thru the text. These letter/numerical conversions are used to determine potential anchor points for the engineering of important underlying market cycles.

Volume 2 continues the research into more advanced topics and more deeply hidden and important cycles. The insights in these two volumes represents efforts from 20 years of tireless research!

2020 Elections and the Georgia Guidestones

By Dr. Lorrie Bennett

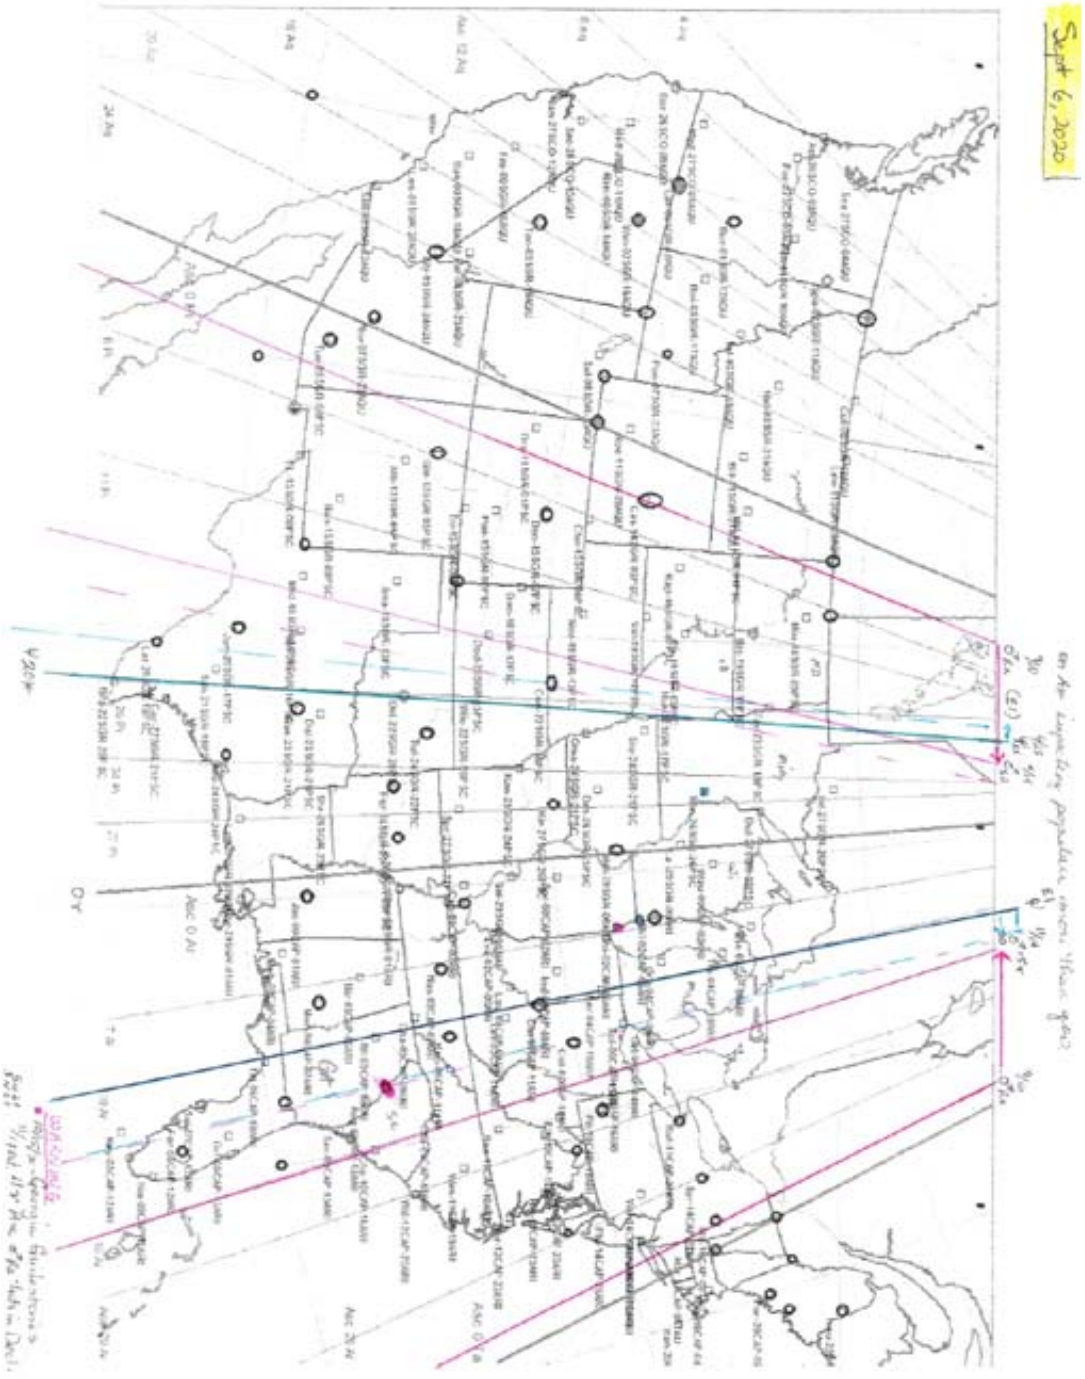

On 3/22/1980 the Georgia Guidestones were erected and opened to the public. Their significance is discussed in the attached writeup on the Guidestones. Here is the chart for their opening containing the key astrological elements that are being compared with the 2020 US elections.

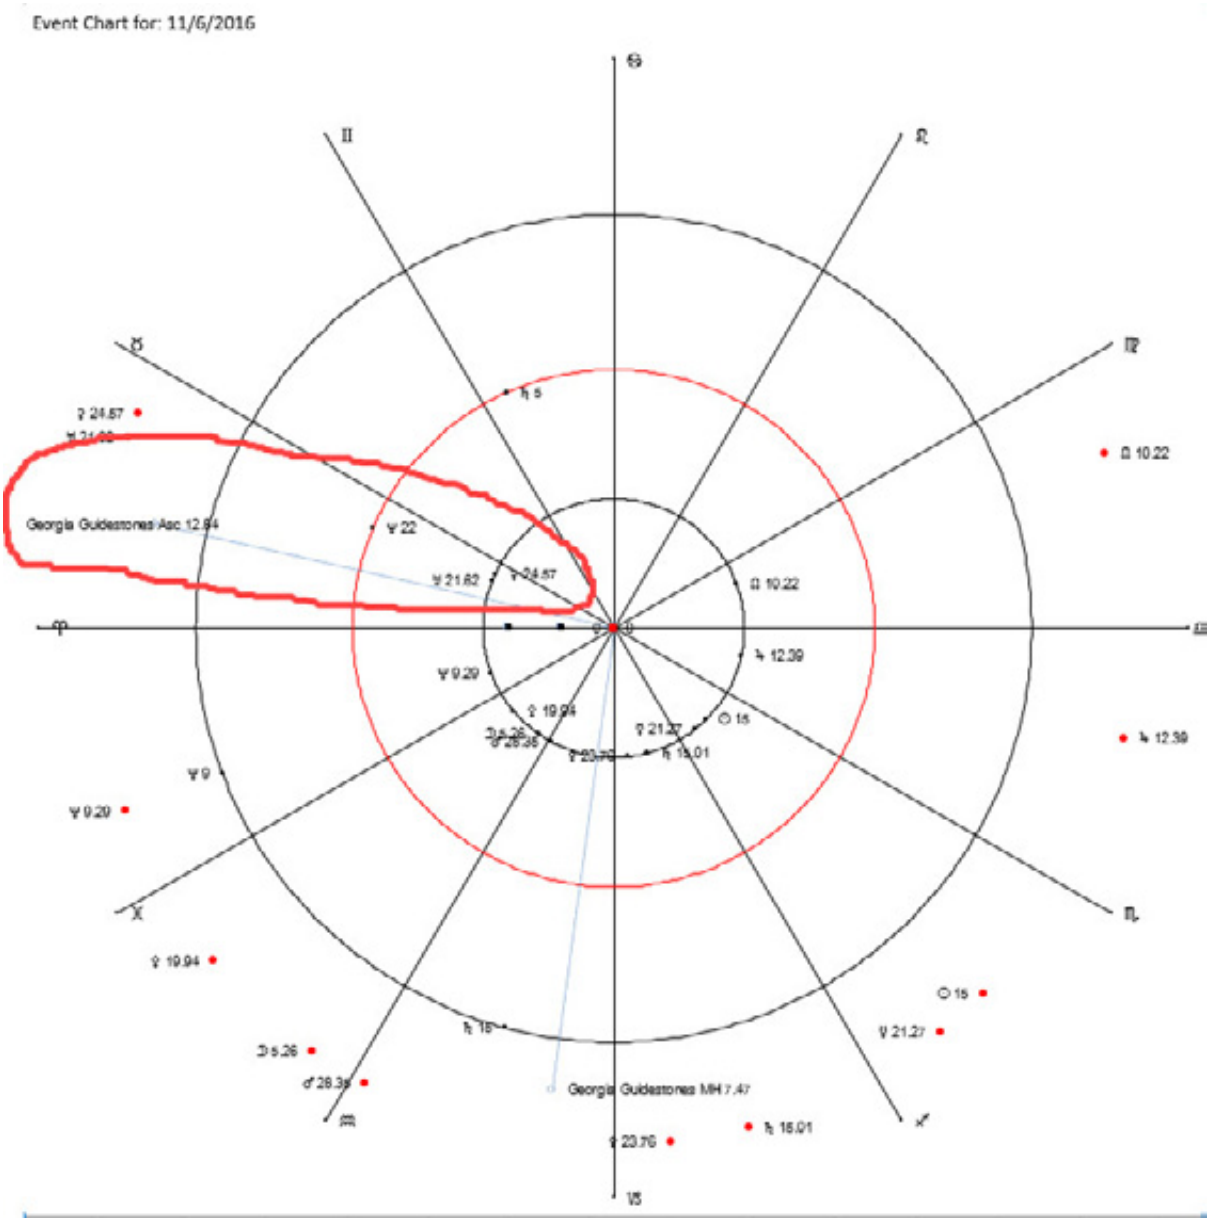

Note that in this chart Neptune is located at the exact MidHaven point for the Guide Stones (approx. 7 Capricorn) while Saturn is at the Ascendant position for the Guidestone (approx. 11 Aries).

What is the energy which occurs when Saturn and Neptune interact? From Ebertin's Stellar Influences, "*Suffering, renunciations, asceticism. The readiness for sacrifice, a struggle between the lower and the higher nature, the methodical execution of plans, slow attainment of success through intense activity and great painstaking effort, diseases with causes difficult to ascertain"*

Moving forward to 2020 and the September Sun Magnetic Axis crossing on 9/6/2020 and the following Geodetic Chart shows the interaction of Mars and Neptune in the fall of 2020 over the United States.

The key lines have been marked which show the position of Mars as it turns retrograde on September 10 and then direct again on 11/14/2020. It also shows the reflective position of Neptune from its retrograde point on 6/23/2020 to its turning direct on 11/29/2020. The line of impact between the two is the dashed line which runs from the Eastern side of Michigan to the western side of the tip of Florida directly over the Georgia Guidestones.

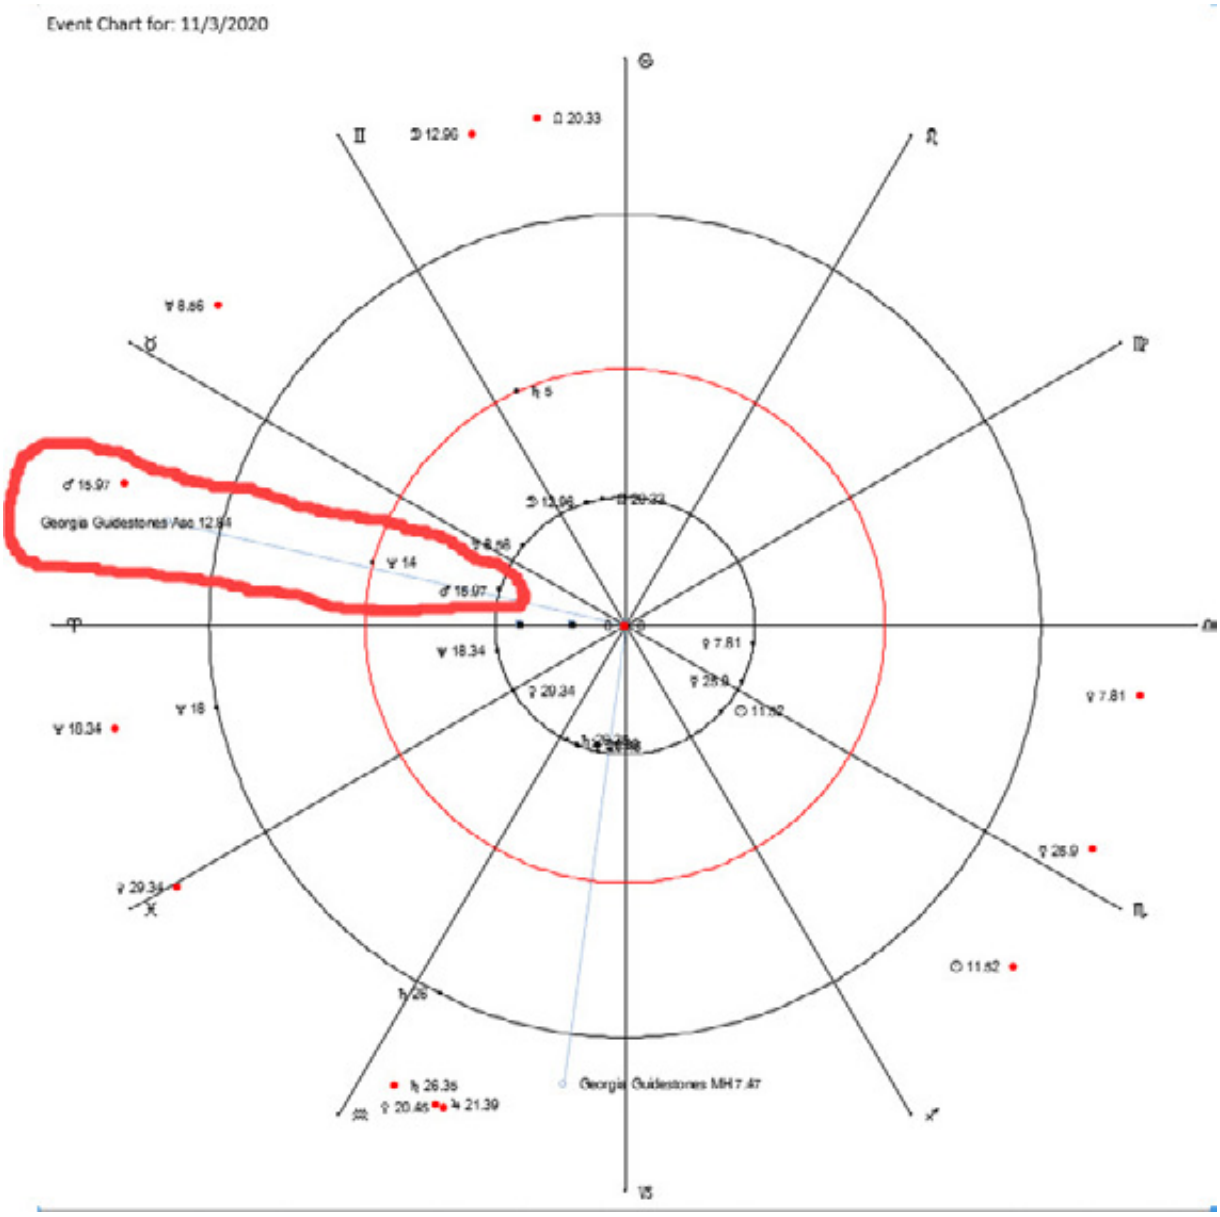

This indicates that at the point of the election the Mars/Neptune energy will be charging the Guidestones in negative energy as both planets are retrograde. Note that the Mars line over New York City west will remain charged until the early part of January 2021. This suggest a major negative event continuing until January 2021. The energy drawn from the Guidestones is negative as discussed in the writeup on the Guidestones and as the planets are retrograde during the elections and “fallen” then the energy can be used more easily for nefarious deeds. Here is the event chart for the US elections: Note the position of Neptune and Mars at the

Ascendant of the Georgia Guidestones.

The energy of Mars/Neptune is *the desire to harm other people, misuse or abuse of physical energy, misdirected powers and capabilities (in a criminal sense), self-destroying forces and agents such as narcotic poisons or drugs, moodiness, irritability, discontent, feelings of inferiority, state of being unsatisfied.* Those in control have tapped into this energy in the leadup to the elections.

Take a moment to note that in the 40 years since the Guidestones were built the position of Neptune has moved from the MidHaven to the Ascendant of the Guidestones. I do not think that the excessive violence and other events being played out are coincidental.

Next chart, I questioned the 2016 election and found something interesting as well. In 2016 Neptune was at a related point along with Uranus close to the Guidestone's ascendant.

Note that in 2016, Neptune and Uranus are approximately 10 degrees from the Guidestones. I think that those in charge of disruptions believed that with the placement of retrograde Neptune and retrograde Uranus within 10 degrees of the Ascendant that the energetic effect would be strong enough to be disruptive, even being 10 degrees away. It was but was not strong enough to overcome the positive energy. In 2020 the key planets of Mars and Neptune are retrograde but directly on the ascendant of the Guidestones indicating a much stronger tie and charging of the stones. This will increase the energy available to those desiring to control and disrupt the upcoming elections.

Georgia Guidestones: A Satanic conspiracy or just a bunch of very large rocks?

Georgia Guidestones
34.13 N; 82.53W
Asc: 11 Aries; MH: 7 Cap 7

Why did they build it?

One direction of investigating why it was built is the simple question of "What does it oppose in position on the Earth?" This assumes a nefarious reason which might just be fair to consider given the following.

I investigated Washington DC, and that was thereabouts but not much impact. Then I went deeper and asked what Satan would want if they were truly in promotion of the Satanic ideals. I investigated various religious retreats and their locations as well as some ancient sites which are noted in religious literature. The ancient city of the Ancient of Days, Sanat Kumara built Shambala to anchor the light to bring mankind back from the realm of caveman to the realm of light. So, I checked Tibet, as Tibet is considered a remnant of Shambala.

Tibet is at 32.3N; 97E which translates to

Ascendant of 6 Libra; Mid-Haven of 7 Cancer

Compare these positions to the ones for the Guidestones and you will note that the Guidestones and Tibet are in the direct opposite position in the Ascendant and Mid-haven of both locations. Why that day, March 22,1980? Well that is the Spring Equinox of 1980. Further all the outer planets and Mercury were retrograde and misbehaving.

Mars 27 Leo rx
Jup 2 Vir rx
Sat 23 Vir rx (conjunction the Asc of Tibet via Ecliptic intercept)
Uran 25 Scor rx
Nept 22 Sag SR (conjunction Mid-Haven of Tibet via Ecliptic Intercept)

Plu 20 Liv rx
Node 28 Leo rx conjunct Mars
Moon conjunct Mid0haven of Tibet and 90* to Sun
Mercury 7 Pisces just entering SD
Ceres at 4 Tarus or EI Mars at 27 Leo

The Sun would be charging the Stones as it enters Aries and is opposite the Asc of Tibet. In all my work I have never seen all these retrograde[1] at once and as stated on Wikipedia… they had waited 20 years to build it. So, about 1960 is the start or when the Dali Lama was born as the head of Tibet. It is also when the Holy Christ children were being born (1962) as well as the 9 Buddhas (1964).

Looking at the meaning of a few of these positions and aspects:
Mar cj Node stimulates the activity of the Astral body. A disturbance of the great life rhythms, precocity, disturbances during climacteric years (Mother energy disturbed), euncuchism and eunuchlike behavior.
Nept rx at MH of Tibet: a tendency to succumb to strange and unusual purposes, proneness to deception, pursuit of wrong ideals, people with utopian ideals, crooks, and swindlers.

So, taking all this into account, one can see that the Guidestones are meant to anchor a direct attack on the energy of Shambala via Tibet. Once the stones were opened, the energy of the above astrological configuration can continue. The only way to break the effect is to place a "warding" in Tibet to break the flow, or to somehow break the connection to the configuration via a placement of an amulet in a related place of which there will be two.

Nepal is one point where a counter structure could be positioned to stop the energy from affecting Tibet as much. Or amazingly, a building in Fort Worth Texas is also a valid location to stop the Guidestones from working.

For more information on my research and book series, see my author page at the Institute of Cosmological Economics: https://www.cosmoeconomics.com/EZ/ice/ice/lorrie-bennett.php or email institute@CosmoEconomics.com and the email will be forwarded to me.

1 Now something that few realize. In the book of Revelations Chapter 12:4 it is noted that a third of heaven fell. Now most of us know that "to fall" means to be in opposition. When one observes the position of the Sun and the position of planets which are retrograde (misbehaving), one finds that there is approximately 120 degrees or 1/3 of the circle that is fallen or retrograde from the Sun at any point in time. We now have the same significant number of outer retrograde planets going into the 2020 elections.

How to turn Small Accounts into BIG Profits like W. D. Gann…

Market Vibrations

W.D. Gann's *How to Make Profits* in Modern Markets

By Gordon Roberts

REPRODUCE GANN'S LEGENDARY RETURNS THROUGH LEVERAGED POSITION TRADING…

INTENT OF THIS COURSE

This course provide a trading strategy that allows for **large returns from low risk with an average risk:reward ratio of 1:10**, with returns of 500% per trade to some returns exceeding 5000%. The strategy employs powerful, straight forward analytical techniques explained in Gann's ***How to Make Profits in Commodities*** to identify high value trade setups which can be employed using highly leveraged options strategies to generate large but safe returns.

The analytical techniques and strategy **do not require any prior Gann knowledge** or any past trading experience. They can be easily applied by any trader, new or seasoned, to great effect with very little time or difficulty. The strategy is based upon **"leveraged position trading**" so requires little time or effort to manage. Minimum capital requirements are very low, so **someone with an account as small as a few $1000 can effectively implement this strategy**.

WHAT YOU WILL LEARN

- **Low risk, high reward trades averaging 1:10 risk:reward ratio!**
- **Trade setups with minimum 500% return & average 1000% return!**
- **BIG trade setups return 2000% – 5000% when they hit!**
- **Uses simple Gann-based analytical tools, easy to learn & apply!**
- **Strategy works with small trading accounts to make big gains!**
- **Uses classical Gann risk management and account management to produce the BIG returns like those Gann is famous for…**
- **A simple technique for beginners… a new strategy for seasoned traders!**
- **Online Forum for Q&A, and analysis!**

FOR A DETAILED WRITE-UP, SAMPLE TRADES & AUTHOR INTRODUCTION &SAMPLE TEXT SEE:

GANN'S SYSTEM SCIENTIFICALLY EXPLAINED!

The Law of Vibration Series

Patterns & Numbers

EXPOSING THE UNDERLYING SECRETS OF W.D. GANN & DR. BAUMRING

BY DR. LORRIE V. BENNETT

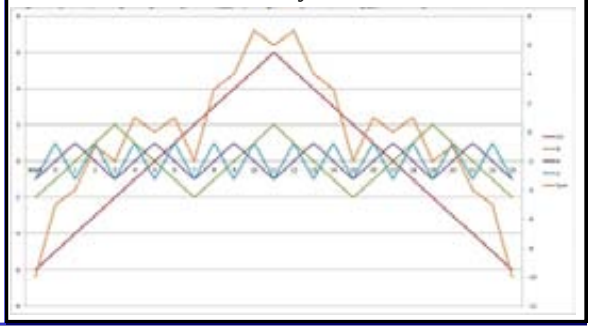

NUMBERS IS NOW AVAILABLE

750-PAGE PDF - PRINT ED. IN DEC!

- BOOK 1 - LOV BY THE PATTERNS
- BOOK 2 - LOV BY THE NUMBERS
- BOOK 3 - LOV BY THE PLANETS - 2021
- BOOK 4 - LOV BY THE GEOMETRY-23

NEWEST BREAKTHROUGHS IN GANN

This book will provide the initial unveiling of the **13 Sacred Numbers**, revealed in the secret code hidden in **The Magic Word**, that are the basis for Gann's cycle system and the natural law/logic behind them. Also within the works is the Periodic Table of Numbers which helps to reveal the "hidden octave" of the square root of two as well as the measures of **PHI** and **PI** and their source calculations within the very Structure of Numbers

The Philosophical Roots of Gann Analysis and Cosmological Economics

By William Bradstreet Stewart

The search for order within chaos is a quest that stretches back to the earliest reaches of human thought. Since ancient man's first development of science and philosophy, two fundamental positions have vied for dominance. One claims randomness to be the underlying factor of the universe, while the other argues that order pervades this entire cosmos, and that the perception of randomness is merely an artifact of an ignorance yet to be penetrated.

As humanity advances from one scientific revolution to the next, from Renaissance to Enlightenment, through Einstein's Relativity to high energy particle physics, pushing ever forward into sciences of greater order like Chaos and Complexity Theory, Superstring Theory, and M Theory, one thing is forever assured, that where once chaos reigned, now order dominates!

Yet still, we see the arguments of the random theorists persist within fields where their viewpoints are as yet incapable of penetrating, arguing with all the passion of the religious fundamentalist that the claim of order in some complex systems is even unscientific, when in reality, such a discovery would represent the epitome of scientific method.

Finding Order Within the Limits of Our Tools & Beliefs

In the same way, the modern economic theorist who believes in Random Walk Theory, may find himself denying even the possibility of order within a complex social system like the financial markets. CosmoEconomic theory would argue that this denial is due to the fact that their limited tools are incapable of quantifying such order, while their belief system is incapable of accepting that such order could even possibly exist.

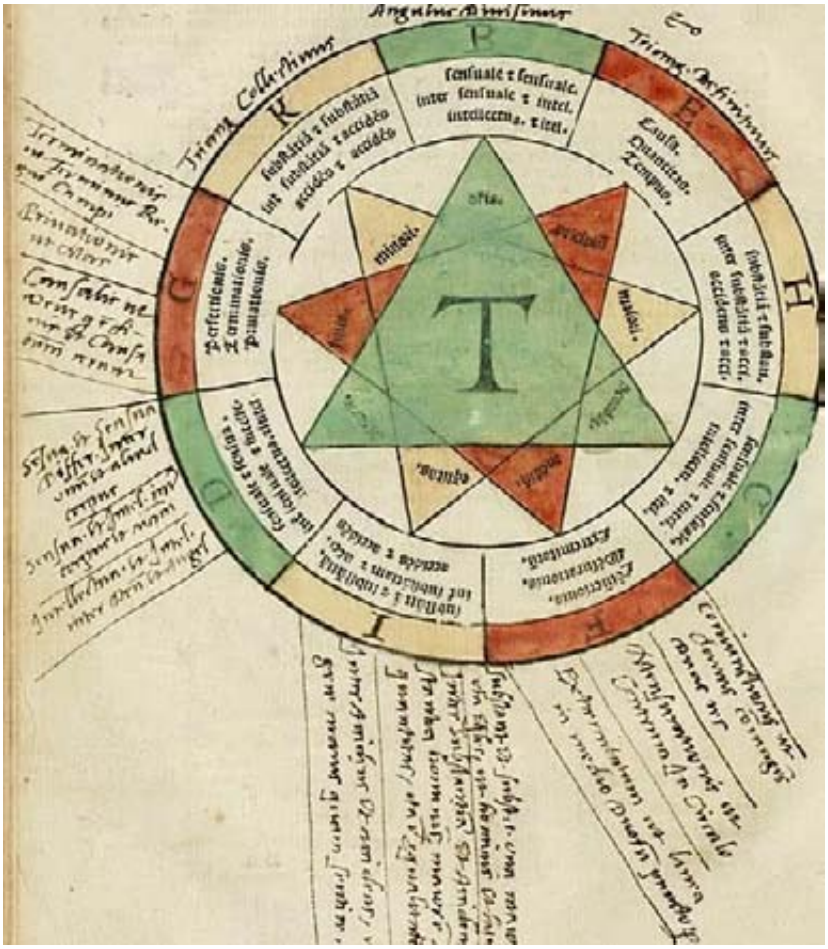

The implications of such an unknown order or causation existing beneath what have always been considered random phenomena, and between what have scientifically been considered to be disconnected material and non-material elements of reality, would be so revolutionary as to force the redefinition of the fundamental assumptions underlying our entire interpretation of the universe and our position within it.

Leaving Room for that which We Do Not Know

Such considerations cannot be dismissed by any truly objective thinker who possesses the intellectual integrity to fully investigate the data before making an uninformed judgement. Such judgments would, in truth, be nothing more than meaningless dogmatic opinions, as lacking in intellectual honesty as the dogmatisms expressed by the ignorant religious fundamentalist.

Sadly, many scientists and academics today lack the intellectual integrity to objectively explore theories and evidence that fall beyond the scope of their dogmatic belief systems. In the evolution of science over the last 100 years, the limited biases of militant materialism and logical positivism have infested the scientific community causing what was once an objective scientific tradition to degenerate into a narrow-minded and dogmatic *scientism* that plagues much of modern mainstream society and academia today.

The Institute of Cosmological Economics looks back to the traditions of old wherein the investigation of reality and natural phenomena were done without the stagnant preconceived notions that hinder the modern dogmatist, whether scientific OR religious, as our position lies somewhere closer to the center between both. With an open mind and the tools of rigorous analysis, we seek evidence of correlation between uncorrelated fields that would never be considered within more limited and rigid systems of thought, if not being outright rejected without consideration, as many cutting-edge ideas commonly are today.

Raymond Lulli's "Logic Calculator" from "Introductorium magne artis generalis reuerendissumi doctoris illuminati" (1517)

Reimagining the Future with Help from Ancient Knowledge Traditions

We have discovered that there are traditions of knowledge reaching back to ancient times that possess insights into the interconnectedness of all things, both material and nonmaterial, which have been all but lost today. In appreciation of this, we turn to resources that have been missed or ignored by modern thinkers and revive traditions of thought and knowledge which have been discarded or lost to the modern world. Our catalog of reprints represents what we have discovered to be the most valuable and useful of these traditions, permanently preserved for the of the out-of-the-box thinkers of tomorrow.

Back at the turn of the 20th century, the academic scientists of the day thought that they had explained all there was to know of the material world. Looking back at them now, we smile condescendingly, knowing just how wrong they were! Similarly, when we look ahead to the science that will exist 100 or 500 years from now, we must ask ourselves, “What will they understand and smile about, that we are totally missing today?”

Cosmological Economics is one branch of this science of the future that we feel has been missed or ignored by the mainstream thinkers of today. It has the potential to open the doorway to the kind of insights that have the power to redefine the scientific, social, psychological, economic and spiritual traditions of mankind in ways that are hard to even imagine.

Ultimately, this branch of science leads to a quest for a fuller understanding of the Universal Cosmology behind all things. CosmoEconomics is but one application within this grander theory that seeks to unveil as yet unknown universal correlations, causations and order within seemingly random and mundane phenomena.

Idealism VS. Materialism

“The Universe begins to look more like a great thought than like a great machine.” – Sir James Jeans, British Astrophysicist, The Mysterious Universe, 1930.

The title page from Robert Fludd's "Utriusque cosmi maioris scilicet et minoris … historia". Showing his vitruvian man superimposed atop a cosmological macrocosm and microcosm. As above, so below. Line engraving by T. de Bry, 1617.

Returning to our quest for order within randomness, we must ask ourselves, if the assumptions of randomness within the financial markets could be proven to be wrong through the elaboration of a mathematical order or the demonstration of a process of cosmological causation or correlation behind such complex social and psychological systems, would this not require, if not inspire, a revolution in scientific, social and economic theory at the very least?

Such a revelation would force a reevaluation of all scientific and social theory from the ground up. It would fundamentally redefine the synergistic relationship between man and his environment, psychophysiology and cosmology. This theoretical dualism again characterizes an ancient debate between traditional idealism and modern materialism.

Idealism: Our Universe as an Extension of Mind

The history of the world, in every tradition as far back as human thought reaches, fundamentally defined the universe from what would be considered a perspective of "idealism." Idealism sees the material world as being the extension of a mind, energy or consciousness-based field underlying and empowering it. In this tradition, the universe is seen as unfolding out of this unified field, manifesting through a hierarchy of dimensional planes ranging from the highly subtle, if not unmanifest, to the concrete and tangible physical universe.

From this perspective, the material planes are seen as a subset or extension of the more subtle energetic realms, which serve as the source of all material reality, and provide the order and laws which govern it.

Materialism: Can it be Proven in a Quantum World?

In contradistinction to this traditional perspective, only in modern times (with a few schismatic older roots) has there developed a school of scientific materialism which has promoted an alternative perspective positing the material universe as the ground of existence, with all non-material elements such as individual or mass consciousness being merely secondary artifacts of a biological brain, without which all consciousness and subjective orientation is incapable of existing. Such a perspective denies the vast range of metaphysical possibilities which exist in idealism, limiting all reality to nothing but pure matter and the direct consequences of it. It is essentially an exact reversal of the perspective of idealism.

However, as science progresses further into the more rarified realms of high energy particle physics, quantum mechanics and Relativity, the materialistic model begins breaking down, and objective phenomena begin to be defined by more abstract elements like energy and fields, and the line between matter, energy and consciousness begins to blur. Paradoxes like Schrodinger's Cat begin to demonstrate that the interdependence between the observer and the object observed is something that cannot be discounted, and that objective, material reality may not be something as solid and clearly identifiable as people think. Similarly, Relativity begins to distort the meaning and experience of time as it is perceived from different vantage points, even bringing into question the validity of our linear experience of time altogether.

In fact, in the same way that materialists often demand that idealists "prove" the existence of abstract elements, consciousness fields or religious principles like God, the same question can be reversed upon themselves. If one demands that materialists provide "proof" that the objective material universe even exists at all, and is not simply a conceptual construct of our subjective consciousness, like a dream, materialists are just as incapable of proving that existence as a spiritual person is of "proving" the existence of God to a materialist. Any person with the capacity for deep thought is capable of engaging and proving this simple thought experiment for themselves, and any honest rational thinker will see that both lines of thought lead to the same inconclusive ends.

The logic of such the argument runs as follows:

All evidence of the existence of the material universe is, first of all, only obtained by the action of an individual's subjective consciousness, and any scientific tool of measurement is nothing more than the extension of one of our physical senses, the input of which is known only by the associated brain using that tool.

Similarly, all scientific laws, principles and theories are nothing but mere mental constructions developed by the subjective thinker using his brain and subjective awareness.

Our Unanswerable Paradox

Since it is impossible for anyone to "know" anything without the use of this subjective consciousness or awareness, the material universe can ONLY be known to exist within subjective consciousness. And since all perception, awareness, measurement, conception of the universe only exists within and through the subjective consciousness, there is no way to "prove" that the universe itself is not merely a mental projection or conception of that subjective consciousness.

In our dreams, our internal universe is perceived to be just as real as in our waking state, and it has been scientifically proven that our body and brain waves respond to these dream states exactly as they would to the real, "objective" world. As the ancient tradition so aptly tells it, the great Taoist sage, Chung Hua, awoke from a dream in which he had been a butterfly flying from flower to flower… but upon a moment's reflection pondered:

"Was it Chung Hua dreaming that he was a butterfly, or is it the butterfly now dreaming that he is Chung Hua?"

This is an unanswerable paradox which undermines the position of the materialist once and for all, leaving the basis of their supposed "objective reality" as nothing but a subjective proposition. Every scientific instrument is nothing more than an extension of one of our physical sensory mechanisms, all of which are tendrils or extensions of our brain and mind or subjective consciousness. As such, no scientific instrument can be absolutely verified to be perceiving an absolute objective reality that exists on its own outside of our subjective consciousness. Remove that subjective consciousness and the objective universe ceases to exist right along with it.

Understanding this paradox leaves the contemplative thinker in position of greater humility and unknowing of the true relation between the subjective and the objective, the ideal and the material. This being the case, it is due time that mature minds put aside unexamined prejudices and instead open to the possibility of a broader vision of reality. In so doing, we do not propose the abandonment of scientific method, but rather call for a broader application of that method, not restricting it to merely materialistic phenomena, particularly since the scientific method itself is nothing but a subjective exercise upon subjectively percieved phenomena.

Re-examining the Scientific Method

A diagram depicting The Scientific Method. Observations of the natural world lead to questions. Scientific questions generate hypotheses, many of which may be tested through controlled experimentation. Experimentation and analysis allows hypotheses to be falsified, which provide information (or conclusions). The process of scientific experimentation leads to more observations and questions.

Now that materialistic objectivity has been called into question, let's also address rational objectivity and the relationship between preconceived notion and unbiased exploration. True scientific method is intended to operate from a mental position of pure rational objectivity, engaging in repeatable experiments to determine the potential validity of hypotheses developed from research or theoretical reasoning. Sadly, many modern scientists have lost the objectivity required to honestly conduct such research, and instead often evaluate alternative theories from a position of rigid pre-conceived notions and dogmatic belief systems which contaminate the results of their observation.

In so doing, much of modern academic science has lost its true scientific standing and has instead become the violent defender of opinion based dogma, rejecting without consideration theories that fall outside the purview of its materialistic belief system, just like the Church in the Middle Ages fought to uphold its rigid dogmatism in the face of scientific research and evidence. The Church placed Galileo under house arrest for claiming that the Earth circled the sun, and that moons did the same with planets and refused to look in the telescope to SEE that easily proven truth. In the same way, many scientists refuse to even look at the evidence provided by CosmoEconomics, let alone engage in an objective rational exploration of its possibilities with an

open and explorative mind. And so have the tables turned…

Much of modern academician deals with issues like the mysteries of ancient civilizations, or PSI phenomena, healing, mysticism and the like by simply ignoring the issues, or denying that they exist at all other than as some kind of delusion. This sort of "sweep it under the run and hope no one notices" type of approach worked fine back in the day when knowledge was restricted by the control of academic institutions. But with the advent of the Internet where people can share and discover information from independent sources, academia is losing their stranglehold on public information, and the common sense of a wider public is calling such dismissals into question.

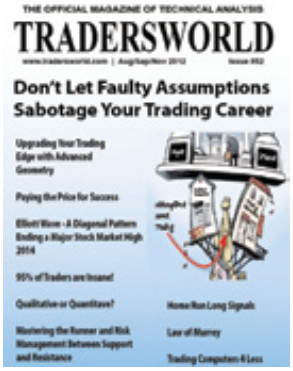

Our exploration of Cosmological Economics is based upon a perspective that rejects the institutionalized dogma of today which considers markets to be a random and unpredictable phenomenon, and instead seeks to understand and develop a wider universal theory that extends beyond the boundaries of modern random walk theory, and its basis in materialistic science. This is done through extensive research and experimentation to develop working hypotheses which prove an interconnectedness and perhaps even causation between these physical and mathematical laws of the cosmos, and these subtler, yet still universal elements of social and psychological phenomena like civilizations, governments, companies, individuals and their creations such as the financial markets.

Grey Swan Warning
September 12, 2020

Chris Vermeulen
Chief Market Strategist
TheTechnicalTraders.com

Our researchers believe a major price event, we're calling it a Grey Swan" event, is about to unload on the US and global markets. Our deep market cycle research suggests a major price event is about to unload on an unsuspecting market. After the US Fed and global central banks have poured trillions into preventing the COVID-19 virus event from disrupting capital and credit markets, we are now at a point where a confluence of major cycle and price events appear to be converging.

We are terming this setup a "Grey Swan" event. What is a Grey Swan? We believe a Grey Swan even is an event that is clearly evident to investors and traders given the economic data, future economic expectations and the phase of the market trend. Currently, we are in what we believe is an "Excess Phase" - which is very similar to the 1998~1999 DOT COM bubble rally. This phase is indicative of spiraling upside price trends based mostly on speculation and retail trading – ignoring the obvious liquidity, solvency and future economic expectations of the organic local and global markets.

A Grey Swan Event is the sudden realization that the party won't go on forever – much like the end of the DOT COM bubble. Where traders/investors suddenly realize the current price levels and valuations of a hand full of stocks are so disconnect from the reality of the market that the markets contract away from these risks. Think of it as "we should have seen it building, but we were too busy trying to ride the upward trend that we didn't pay attention to the risks".

THE SETUP – POSSIBLE MASSIVE PRICE COLLAPSE IN THE WORKS

The setup is most clearly seen in the SPY and the FAANG index. A clear downside price rotation has taken place and there is a very clear support level that is in place on the chart. If this support level is broken to the downside, we believe a much deeper downside (unwinding of risk) will take place prior to the US presidential elections. If this support level is not broken over the next few days/weeks, we believe a moderate upside price move will take place to setup an ultimate peak in the markets within about 14 trading days. Eventually, this ultimate peak will likely present another volume price rotation in the markets that may present the real final top.

SPY Chart

Notice the large Fibonacci Price Amplitude Arc near the "3" on this chart. This Fibonacci Price Amplitude Arc is critical to the understanding of price function. If our research is correct, this

ARC will act as a very strong price inflection point – potentially collapsing price over the next few weeks and months. Additionally, pay attention to the upper YELLOW price channel that originates from the peak in 2018. This price channel is acting as a key "overbought" level in price. The US Fed was able to support the markets enough that speculators jumped into the trends in the technology sector. Now, after the major markets peaked near this upper channel – there is a very big risk of an unwinding of capital. We believe this unwinding could turn into a collapse if enough momentum exists the markets prior to the US elections.

The Fibonacci Trigger level near $333 is critical at this stage of price correction.

FAANGS INDEX

The FAANGs Index sets up a similar pattern with a very clear support level near $941.25. Because of the correction in the US markets and the technology sector, the current support level in the FAANGs Index becomes a very critical price trigger level. If the FAANGs Index collapses below this level, it could begin a downward price collapse that targets $782 or $700 to the downside. This could represent a huge 16% to 25% price decline in the FAANGs Index.

A breakdown below the $900 on the FAANGs Index would represent the potential start of a deeper price decline within the US stock market. This decline could prompt a -11% to -23% price decline overall.

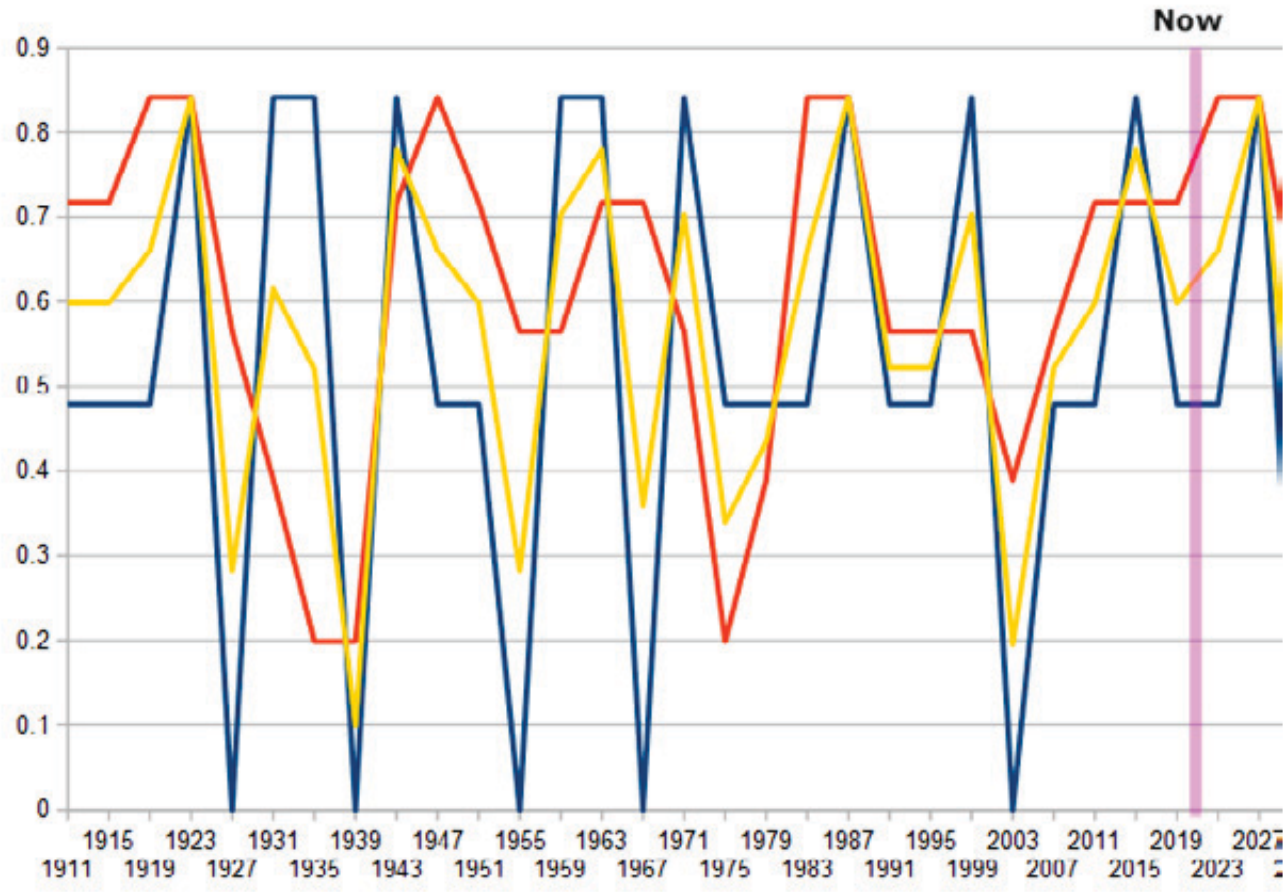

DEEPER CYCLE ANALYSIS

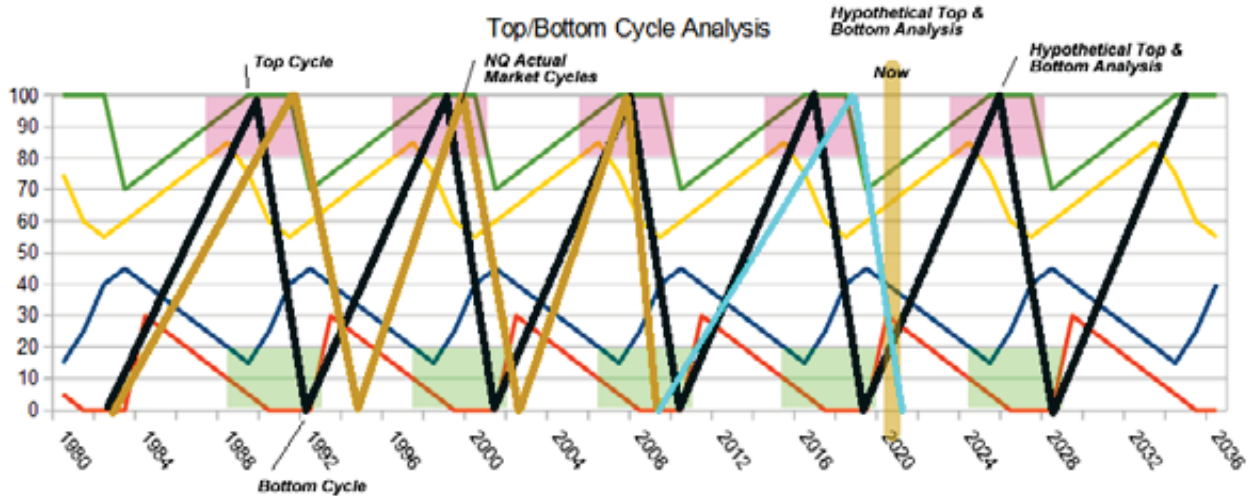

Before we get further into price charts, let's take a look at my longer term cycle charts. We need to understand the broader Super Cycles and how they apply to the relationship of current price activity as we attempt to reconcile the opportunities that lie ahead of us. The ORANGE, shorter-term, cycle line is climbing higher after settling near 71% on 2019. The YELLOW, intermediate-term, cycle line is moving slightly higher after basing near 60%. The BLUE, longer-term, cycle line is staying flat/sideways near 58%. This suggests that the recent upside price rally, prompted by the US Fed and speculative traders, may have pushed price above the historical normal levels and a price reversion may be setting up in the near future.

These longer term Super Cycles suggest we move into a solidly bullish price trending phase after 2023. They also suggest that moderate upside price activity may be broken by volatile downside price events. The longer-term, BLUE, line suggests that no real organic upside price trend should exist until near or after 2023. Because this is the longer-term super cycle level, it suggests that any shorter term upside price event may contract very violently and deeply.

The Super Cycles suggest that we will likely find some "consolidation bottom" between now and 2023 whereas the current price highs, near all-time highs, are not supported by the Super Cycle structures.

This long-term mapping of 7/14 year price cycles suggests the peak in price cycle activity should have happened in 2017-18 (see the black line). Past market price cycle highs have triggered later into the high price cycle ranges (see the RED/PINK areas near the 80% to 100% top of this chart), but they never form near the low price ranges (see the GREEN areas near the 0% to 20% bottom of this chart). If we think about how unusual it would be for a peak in price to occur outside of these cycle ranges, in an opposite construct to the true price cycles and after a very deep price correction (setting up a deep price low), it starts to dawn on us that the current price highs are manipulated/false price exploration prompted by the US Fed and speculative investors.

THE CURRENT SETUP & WARNING

The reality is that the true price high did occur in 2018 and the previous price peaks in the market that were prompted by speculation and global central bank activities were really false price peaks – much like the one we are seeing right now (See the Smart Cash Index chart below). The peak in organic economic activity took place in January 2018. This was the true peak in the markets. Since then, the US stock market has declined into a sideways price channel with a range between 140~170 on this Smart Cash Index chart.

The Head-n-Shoulders pattern (see the MAGENTA lines on the Smart Cash Index chart) suggest a broader topping formation has setup. Additionally, we continue to see a downward sloping RSI peaking channel that suggests we have reached a peak level in price highs right now. If the Smart Cash Index chart is showing the underlying price structure related to true economic activity/recovery results, then we can see the current peak in price is still far below the level of organic economic activity from 2017 and early 2018.

Our researchers believe this conclusion suggests the peaks in 2019 and 2020 were driven by extreme "excess and speculation" related to the amount of capital being poured into the global markets and by speculators/traders chasing high-flying price trends (very similar to what happened in 1999~2000: the DOT COM bubble).

GOING BACK TO THE SPY CHART

Now, as we revert back to the first SPY chart showing our Fibonacci Price Amplitude Arc and other technical data, take a minute to try to digest what is really happening in the markets right now. We have shown you that the broader Super Cycle data suggests a moderate price basing should be setting up and that the 7/14 year price cycle data suggests we should be setting up a momentum base just after a peak level has been reach (in 2017-2018). The Smart Cash Index chart highlights the fact that the organic price trend peaked in 2018 (just as we suspected would be the TRUE PEAK in price). Yet, the current price highs are flying nearly 25%+ higher than that 2018 price peak. What could be causing price activity to be pushing so far above the true price peak level and why is this happening?

Next, we introduce the TTCharger Monthly SPY chart. This chart is very important to understand how the Expanding Wedge formation/pattern over the past 2.5 years has setup with extreme volatility in place. Remember, what causes the "excess phase" to take place is that a prior trend breaks away from true organic growth, but speculative traders/investors continue to pile into select sectors and push the trend higher because they continue to "feed the beast" in terms of outcomes. It happened many centuries ago with the South Seas Trading Company and it happened in 1927~1928 and in 1998~1999. The cycle of "excess" is hard to understand, but all you need to think of is a "feeding frenzy" where the primary feeders are those pushing the buying at every opportunity and pushing the mantra of "it will go up forever".

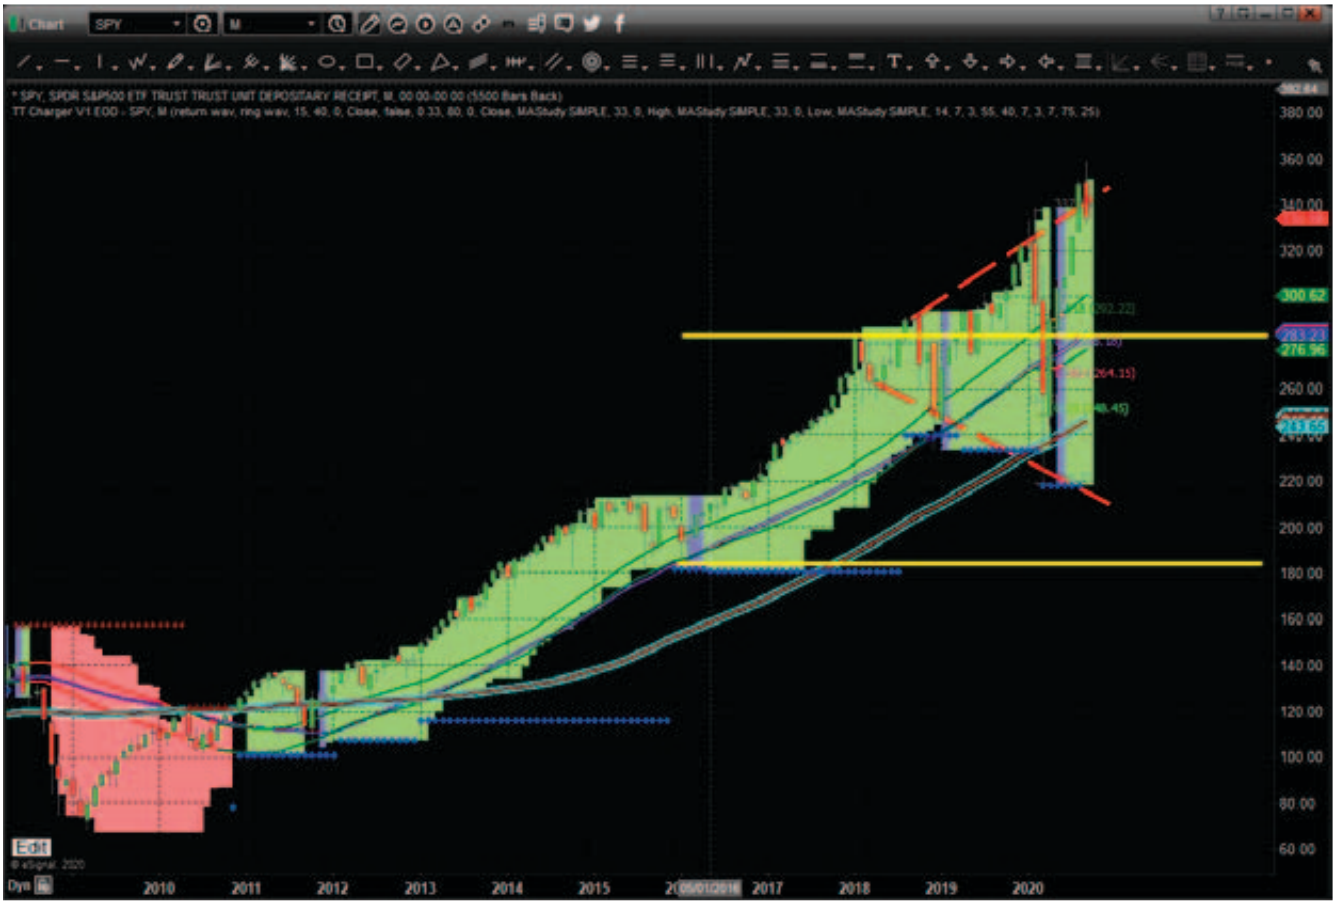

Remember the Bitcoin peak where everyone was suggesting Bitcoin would rally to $50k or $100k within 6 to 12 months. Well, Bitcoin is trading at $10,250 now (nearly 33+ months after the peak and currently at a -47% level from the peak levels). The excess phase is the crazy, stupid money phase where everything seems so simple and the "we can't lose" belief seems un-phased – until it breaks down.

Now, back to the TT Charger Monthly SPY chart. Notice the Expanding Wedge formation highlighted by the DASHED RED bars. Also notice the "core price trend ranges" highlighted by the range envelopes on this chart. The deeper CYAN color range envelope suggests the deepest support level on this chart is currently at 245.25 – that represents a very deep -88.86 point (-26.60%) decline from current price levels. The secondary downside support envelope suggests additional support can be found near 284.35 – that represents a -49.68 point decline (-14.87%).

Historically, price as rebounded off of the secondary downside support levels four times since the bottom formed in 2009. Each time, price has rallied more than 32% (in the largest case rallying more than 85%). Yet, price only crosses the deeper CYAN envelope when a critical price trend change takes place or extended sideways price channeling takes place. If we are correct and a broader market decline is setting up where price may attempt to target the lower price envelop on the TT Charger price modeling system, then we are looking at a potential for a -16%

to -26% downside price correction from current levels (possibly even lower).

If our Super Cycle research is correct suggesting a downward/basing price pattern should take place which will likely end near 2023, then we may be looking at a breakdown of this Expanding Wedge formation with a very strong likelihood that the original 2016~2018 price range may become critical support for the markets (see the YELLOW HORIZONTAL LINES on the TT Charger chart)

This TT Charger Gold Monthly chart highlights the continued rally in Gold that is clearly illustrating the underlying fears related to the global markets and credit expansion efforts by the global Central Banks. Pay very close attention to how Gold started to rally after 2000 and rose from levels near $275 to a peak just below $2000 in 2011. Now, pay attention to how Gold bottomed in 2015~2016 and has begun to rally higher from levels near $1080 to current price levels near $1950. If history is any reference, this upside price trend in gold translates to a roughly 90% price increase – very similar to Gold moving from $275 to $525 back in 2002 to 2005. What about the rest of the rally after 2005? Where is that represented on this chart? We have not even begun to see the type of upward price explosion that took place in late 2005 through the peak in 2011 yet. It's just starting that move right now (we believe).

If Gold could rally over 700% from 2002 to 2011 as fears drove a massive shift in how precious metals were viewed by the global markets, could another 700% rally take place from the recent

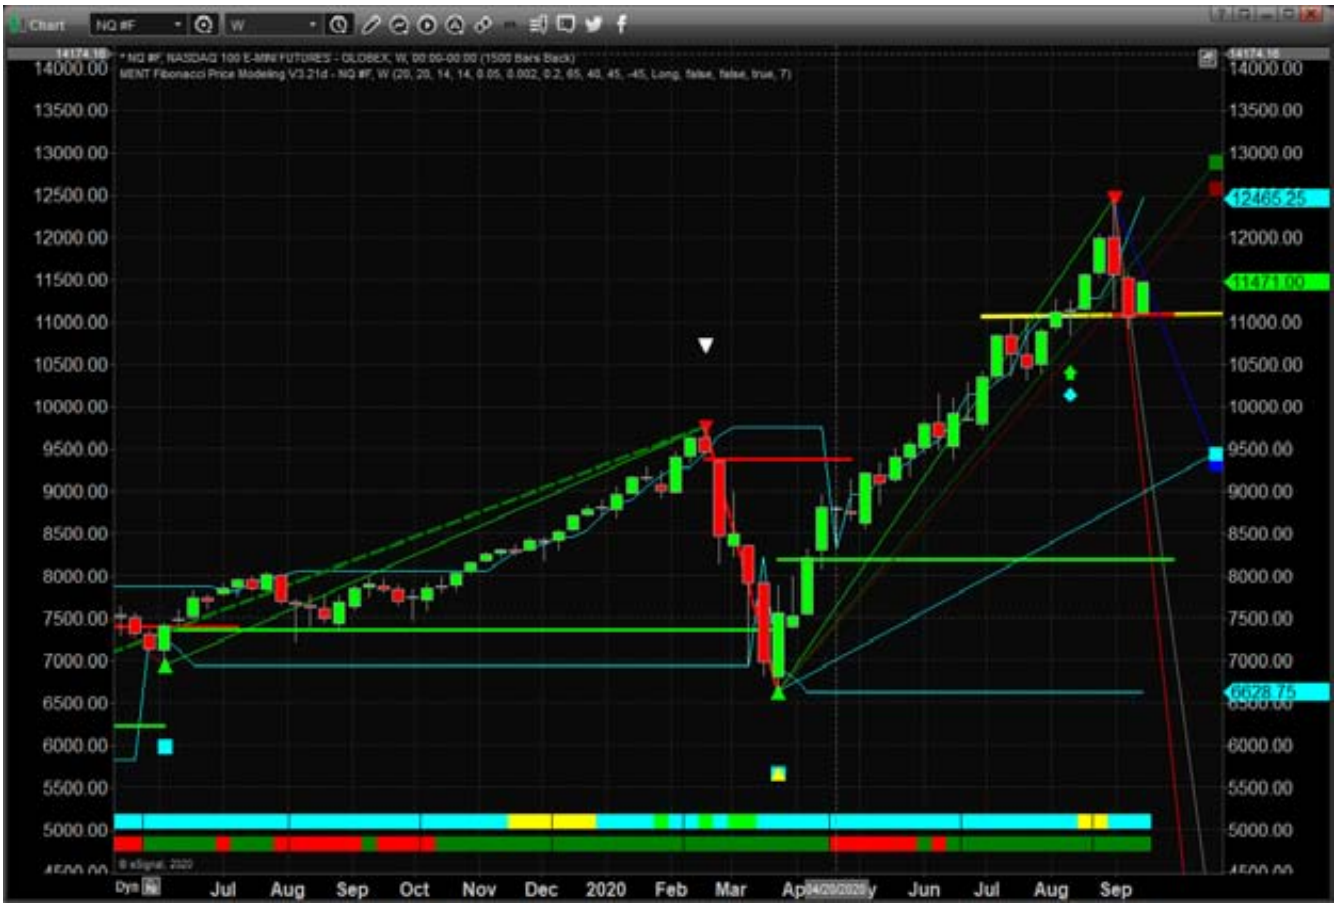

lows near $1080? Could Gold really rally above $7000 and what would the US and global markets look like if something like this happened?

Here is what we are watching as confirmation of the breakdown in the markets and potentially the start of a new bearish price trend. Our Weekly Adaptive Fibonacci Price Modeling System is suggesting the 11,093 level on the NASDAQ is the current Bearish Trigger Level for price. Any breach of this level and a strong downside price close below this level will constitute a potentially strong new bearish price trend.

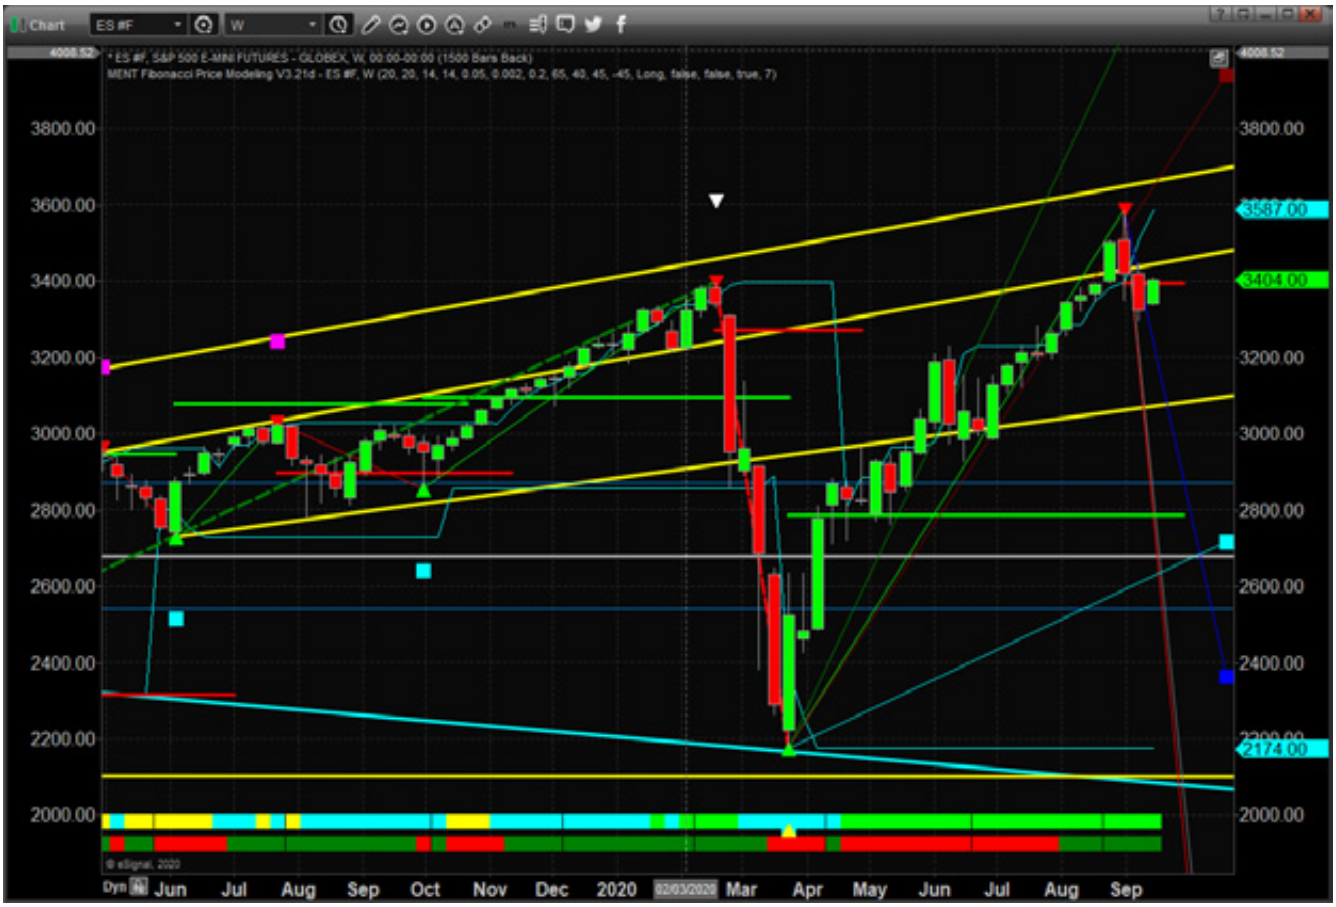

Right now, the NASDAQ is trading near 11,470 and is well above this Fibonacci trigger level. As long as this upward trend is price continues, we have no technical confirmation relating to the breakdown in price and/or the Grey Swan downside price trigger. We are still cautiously bullish at this time – watching and waiting to see if the Grey Swan trigger confirms.

The downside targets for the NASDAQ Weekly chart are clearly visible near 9500 (as the first level of support). The deeper Fibonacci price projection levels suggest a much deeper downside move could be a result of this potential Grey Swan warning.

This next ES, S&P 500, Weekly chart highlights our Adaptive Fibonacci Price Modeling System and the fact that the ES ass already traded below the Bearish Fibonacci Trigger Level – near 3395. Currently, the ES price level has rallied just above this Bearish Trigger level – which stalls the Bearish Trigger until price confirms a Weekly bar close below the 3395 level. Typically, price reacts to these trigger levels as a support/resistance level – moving below or above the level until finally breaching it or moving away from it (possibly resulting in a new bullish price trend).

Support below current price levels on the ES chart are found near 2715 & 2364. Again, we've seen an intra-week price breach of the Bearish Fibonacci Price Trigger Level and we need to wait for an end of week technical confirmation (a Weekly bar closing below the Bearish Fibonacci Trigger Level). If the top in the markets continues to form, as we expect, and the custom Indexes continue to present further confirmation of the downward rotation in price while Gold and Silver continue to rise, we are very likely to see a downside price rotation event take place before or near the November 3 election day. We believe the global markets will enter a phase of "unwinding the excess" as we continue to get closer to the November election day. This unwinding, coupled with the uncertainty of the election event and the potential change in policy/ execution related to legal challenges, social unrest and other issues could paralyze the global markets to some extent.

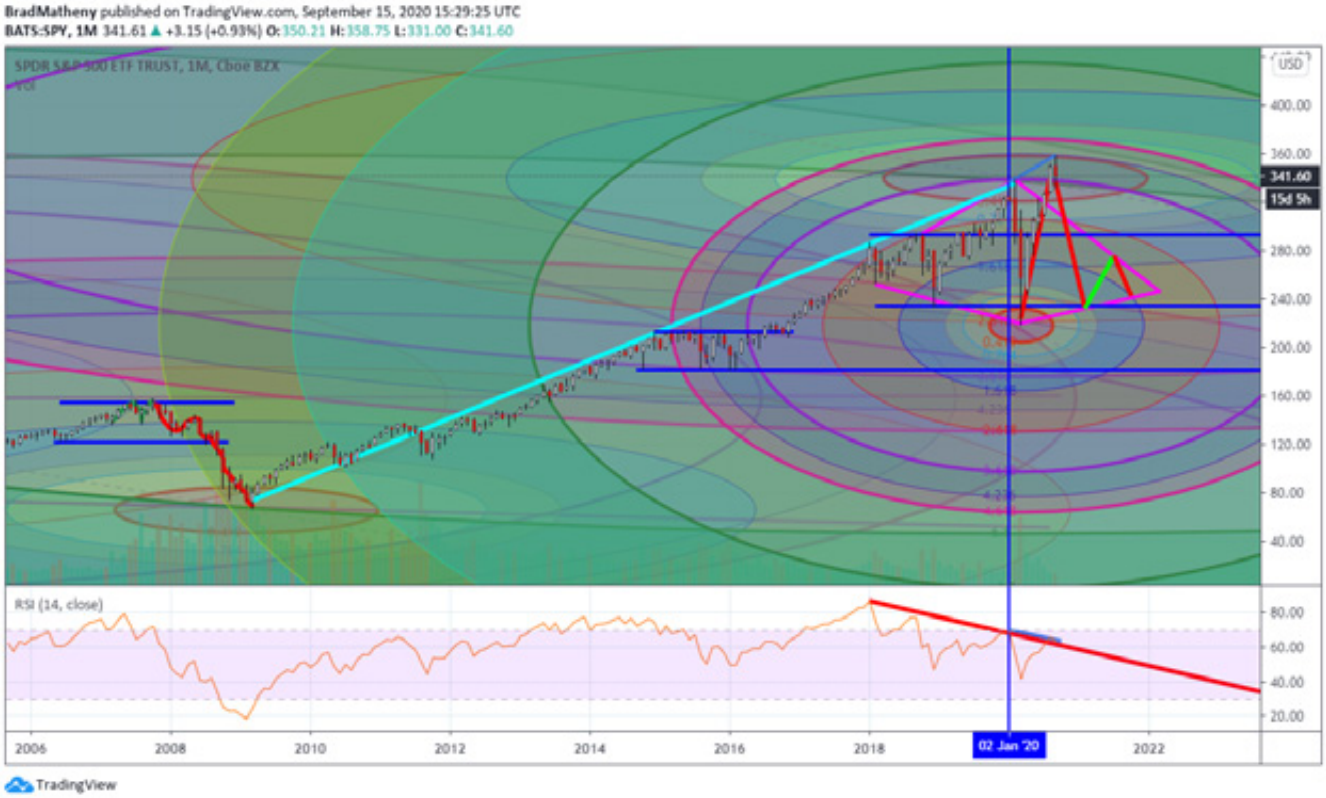

Remember, this is a WARNING of a Grey Swan event – not a trade trigger (yet). We are issuing this warning because we believe our research team has accurately identified a potentially critical price trigger that may result in a very deep market price collapse. We are issuing this warning to attempt to alert our friends and followers of a very critical setup that MAY confirm over the next few days/weeks and result in a very aggressive downside price event.

Longer term, looking out 4+ years, we see a bottom forming in the markets between now and the end of 2023 which will likely prompt a very strong upside price advance based on our longer term Super-Cycle analysis. Ultimately, the next rally in the US stock market will target levels well above 40,000 for the Dow Jones. We just don't see that move happening without a deeper confirmation of the downside move taking place, as our Super-Cycle research suggests.

Stay prepared for this potential breakdown in the US and global markets. Protect your assets accordingly and take proper actions to effectively trade this event if/when it happens. We are still waiting for confirmation of this event and we feel it could confirm within the next 3 to 6+ weeks (before the US election date).

We'll leave you with this SPY chart highlighting the research and expectations from our research team. This is a Monthly SPY chart that highlights some of the key elements of our research and also suggests where we may find a bottom in the market (near or after September 2021 through April 2022). Be prepared if this event does take place as we are suggesting it might.

Isn't it time you learned how I can help you better understand technical analysis as well as find and execute better trades? If you look back at past research, you will see that my incredible team and our proprietary technical analysis tools have shown you what to expect from the markets in the future. Do you want to learn how to profit from these expected moves? If so, sign up for my **Active ETF Swing Trade Signals** today!

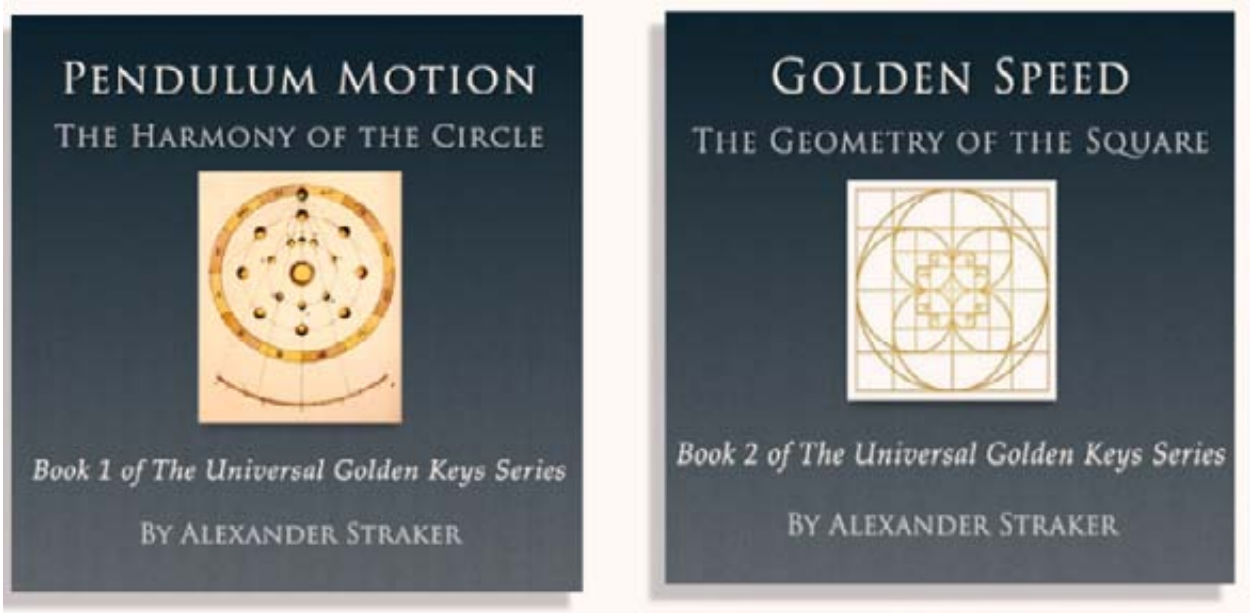

If you have a buy-and-hold or retirement account and are looking for long-term technical signals for when to buy and sell equities, bonds, precious metals, or sit in cash then be sure to subscribe to my **Passive Long-Term ETF Investing Signals** to stay ahead of the market and protect your wealth!

Review of Pendulum Motion and Golden Speed

review by Larry Jacobs

I have been doing Gann research for many years and I have seen just about everything in this area. I have explored about everything using Gann such as vibration, astronomy, geometry, numerology and much more.

The author, Alexander Straker, who probably is a mathematical genius has developed and come up with a new twist in the area of Gann trading ideas. It's called Pendulum Motion. It's a new market phenomenon that the author has discovered. Once you understand Pendulum Motion you have an insight into the actual working of the market with a mathematical model that can be proven with extensive back testing of past data. Having knowledge gives you a vision of the market and what it will do which most other techniques such as computer oscillators just won't give you.

In this book the author gives to a logical mathematical framework for his new theorem that unifies the Golden Mean, Light and Sound via harmonic mathematics. The author has written two books:

Pendulum Motion (Book 1)

https://www.cosmoeconomics.com/EZ/ice/ice/alexander-straker-course-pendulum-motion.php

The first book explains the Golden mean as applied as a fractal division of a spiraling energy vortex dividing the rotational energy into two constituents of light and sound. The techniques in this book are built on something called Circular Scaling which no one has seen before. The author uses a different way of charting using time-by-degree to plot market bars according

to parameters of a circular scale using rotational mechanics. This scaling gives you the key of Pendulum Motion. This is all new and never seen before by anyone.

I have personally tested the method and was quite impressed with it and how good it works on different markets.

Golden Speed (Book2)

https://www.cosmoeconomics.com/EZ/ice/ice/alexander-straker-course-pendulum-motion.php

The second book continues with the Golden Speed, The Geometry of the Square with the different way of Gann scaling. Gann students will have no problem with understanding the theorem. Much of the mathematical concepts explained in the books are original and from the author never published before.

With these two books the author proves 100% the genius of Gann that you have heard about in reports. The author was able to reach his own resolution of the depths of Gann's materials and how it really good it works using simple logic, science and mathematical principles, natural cycles and patterns. The author gives you a new way of understanding Gann's geometric work. The goal of book 2 is to show the root science which underlies Gann's mathematical and geometric tools. This ties Gann's work to the Golden Speed which is necessary to achieving price/time squaring.

Wave 59 Tool

A special technical tool was built for Wave 59 to faciliate the use of methodology. It makes it quite easy. After you purchase the books contact the author about acquiring this tool then you will also have to subscribe to Wave 59.

About the Author

The author is a professional Australian private client adviser. He has many millions of dollars currently under management. In addition to his former role as lecturer in government registered finance industry subjects in Australia, he is a private trader, researcher, analyst, and publisher. He holds a university degree in music along with other professional level qualifications in music, mathematics and education

A Review of Eric Penicka's "*The Clairvoyant's Window*"

By Gordon Roberts

I was fortunate to be approached with an unusual question. It was, "Would you be interested in editing a book about winning bets at the horse races?" As a humble student of W.D. Gann, my mind immediately spiraled back to past readings. I recalled that Mr. Gann was reputed to have done extremely well with races and lotteries. So, I was extremely interested, but I had a problem…

I explained to the publisher that I have neither attended nor bet on a horse race. I had seen the Kentucky Derby with Howard Cosell on TV and that just looked like rich snobs exchanging mutual ass-kisses while horses ran races and everyone got drunk. Despite my well-established ability to get drunk, I didn't think I was qualified as a reviewer given the other subject matter. The publisher responded that he'd actually like the viewpoint of an "uninitiated" person, so I began exploring a new education of sorts.

Before I accepted the project, I asked a friend that had talked about races in the past what he thought of Pari-Mutuel race betting. He was an IBM systems programmer and logistician from the 60s and 70s. He **excitedly** told me that he was confident that he could make a living at the race track but his religious wife of the last 30 years didn't allow him to bet.

Of course, as a friend, I gave him the requisite hell about him being his wife's bitch. We giggled that all us married guys were! Then, he told me that he took lots of money home from the races in the past. He continued on and on about how he loved betting at the tracks. There was a real sparkle in his eye. That "independent review" of racing sold me on this edit project.

Now, "*The Clairvoyant's Window*" and my friend have expanded my horizons a bit. I know that there's more to the horse races than wealthy snobs and mint julips. Guys like me can get drunk and bet on the races too! I've still not attended a race or placed a bet, but I've seen enough to know that the odds approximate 100% that I will be placing a horse racing bet in my future. I'll deviate from the traditional script as I'll probably play on-line and I'll have a stiffer drink than whatever the hell a "julip" is.

Now that I've finished my edit of the book, the publisher asked me to condense the concepts into "layman terms" for a review. He is guessing that the average Gann researcher is like I was and might not know much about the races.

Accordingly, I'll attempt to provide a high-level description of the package and its general theory…

To over-simplify things… where each commodity contract has a winner and a loser for a zero-sum game (commissions are an added cost), and a casino gambler is generally betting against odds where the house has an inherent advantage, the pari-mutuel betting system is different. It has all bettors contributing to a pool of funds. Everyone betting in the pool agrees to payouts that come after the house takes its cut from the pool (to cover track costs and a reasonable profit). In that light, the house builds its "win" into the equation by taking a cut of the pool instead of playing an inherent odds advantage or charging a commission. While the house's "take" is usually a pretty good portion of the total pool of funds, everyone in the pool is happy with the arrangement and still wants to play. They all hope to win more money than they bet and go home richer after a fun day at the races

.

As everyone places their bets, the house/track tabulates everything. Computers do that work today, but it was a mechanical "totalisator" back in the 1920s when Mr. Gann might have loved the races. As the bets are "totalized", the more of the total that is bet on a horse, the lower the payout will be if that horse is a winner. In that way, the combined bets set the odds for each horse. You can watch the odds change and develop on the "tote board" as the julip-swilling race enthusiasts bet.

Again, the pay-out is slanted such that the winners with the lowest "foreseen odds" of winning will get the greatest rewards from the pool. **Every bet is not created equal!** Within this design for a betting system, you literally don't want to bet like everyone else.

This makes the betting take on a dimension of a thinking man's game or "puzzle". If you don't like the odds and your setup for the horses in the race, you don't have to bet. You can sit out that race and get another strong julip-replacement for the next race. I love this aspect of the "sport"…

My success will be governed by how well I out-perform my fellow humans while they try to out-perform me. It's mental jujitsu… and maybe even while getting drunk. What a world we live in! Given the way the combined-human bets dictate the resulting mathematical odds, the people that win the most races won't necessarily win the most money. You can't just bet the obvious winners. If you bet on a horse that wins $0.75 for the $1 you bet, you lost money for a "winning" bet. If you enjoy that kind of experience, you might as well turn your investing prowess loose on negative-interest rate government bonds for a tantalizing long-term holding. Mr. Penicka explains that you need to pick the more elusive and "less-likely" winners for your betting strategies. That's where his analytical tools come into the equation. He is hunting cases where the population of human bettors think his horse is "less likely", while his studies think his odds are much better. Therein is the advantage in Mr. Penicka's world… He studies the races through "*The Clairvoyant's Window*".

In the book, he documents many races over the past few years to show you how the concepts work, and unexpected winners could actually be expected. It's not a flowery presentation, it's

about presenting the evidence.

There could a large number of races and Mr. Penicka may just be excited about a subset of them. He can do much of the prep-work in advance.

Then, his decision to bet is made just before race-time given that the odds and possibly the horses themselves can be changing until… "THEY'RE OFF!"

There has to be a bit of excitement and adrenaline in that environment as you take on risk against everyone else taking on risk… with hopes of bettering their thought process. Don't you just love hope and greed?

Then, unlike trading, with the horse race you will almost always know the outcome in a few short minutes! Then, you repeat the process for the next races.

For more specifics about the book, Mr. Penicka tells the readers up front that he's not here to teach you all about horse racing and betting. He's not going to teach you a lot of the basics. Similarly, he won't tell you about tax implications in your jurisdiction or that race winnings aren't taxable in some countries either. As a newbie, that bothered me at first. I wanted a lot of hand-holding but that was unreasonable of me. It's the same with trading. This level of book simply can't teach me everything about such a topic in 750+ pages… so Mr. Penicka doesn't pretend to try.

Instead, he provides enough references, tools, and resources that I can set out on this quest with a pretty clear direction. I've found that the internet has plentiful resources to learn more too.

I had no idea how popular horse/dog racing is in different parts of the world. With COVID19, maybe this becomes a great long-distance Internet betting hobby. Maybe I have a timely new way to enjoy some Internet time from the house. But… back to the book…

Instead of a bunch of details about the basics, Mr. Penicka explains his theory and provides many pages showing his techniques against a history of actual races. In my case, not much time has passed since he wrote the book, so he essentially provided a lot of back-testing proofs of concept up to my present time.

Mr. Penicka is wise enough to know that he can't just prove this will work for you or me. However, I believe he has established that the strategies have worked to build wonderful betting advantages many times in the past. Proving my ability to duplicate his success will be up to me. All said, I'm thinking it isn't every human that will love this kind of book, but most humans that trade probably can. Using myself as an example, I believe I can look at some odds and make a decision relatively quickly based upon pre-studied input… and place a bet! It's much like trading.

I can probably do that a few times in a racing day between drinks too. Maybe there's even a rich and snobby drunk bastard hiding inside me. Hell… I'll probably even try one of those mint julips!

Another thing I should mention is that I was initially confused with new terminology that comes with esoteric concepts like Vedic Astrology. I can't even pronounce some of it. However, Mr. Penicka provided some Excel tools to help do much of the more "difficult calculations". To me, that is a key or I'd probably be lost. I don't think I necessarily have to know a lot of the astrology or esoteric theory he exposes me to because the Excel tools should help provide that wisdom via formulas and data.

At the same time, if these concepts are working as the many examples suggest, my inner nature will have to study the theory and not just let Excel allow me to remain ignorant! At its heart, I'd argue that the studies are essentially looking at different forms of vibrations. And… for me, a wonderful side-benefit of this all is that now I have an ephemeris capability within my spreadsheets that I previously didn't have.

The irony of it all is that I'd prefer there be no sales of this book! I have zero financial stake in sales and I don't want to split any future betting pools with any of you! That is one of the reasons Mr. Penicka initially didn't want to share his data and spreadsheets. He wanted you to have to work at it before you could compete with him. However, we talked him into sharing that intellectual property too as an essential piece of the package.

That is also a reason that I personally wouldn't be surprised if this book will be removed from the market if Mr. Penicka sees a noticeable impact to his betting wins. If too many people play his strategies, that can impact his payouts, right? After chatting with him, I know that the book is more to document stuff for his family than to make sales in the first place. So… the "Window" of opportunity to learn these strategies may be limited. This book is expensive in part because there are legitimate reasons to not want to sell very many copies! That's an unusual situation for a book.

In summary, I'm glad I did this edit project and I believe I come away from the effort better for it. I'll never know what was in Mr. Gann's head, but I know he spent time studying things like the Vedic wisdom and I know he played the races and lotteries. Maybe Mr. Penicka is revealing some of that tradition. In my opinion, his book provides evidence that I probably needed to open my mind. Now… I just have to go prove the concepts in real-time for myself…

For more information on Eric Penicka's new advanced horse racing course, ***The Clairvoyant's Window: An Astrologer's Key to Parimutuel Success,*** see the following link: https://www.cosmoeconomics.com/EZ/ice/ice/eric-penicka-course-clairvoyant.php

MEET THE MAN WHO CALLED THE 2020 STOCK MARKET CRASH

"THE FARTHER BACK YOU CAN LOOK, THE FARTHER FORWARD YOU ARE LIKELY TO SEE."
- WINSTON CHURCHILL

Meet the man who also forewarned his followers about the forthcoming bull market in Gold & the impending US Civil War. **His name is Andrew Pancholi.**

Keeping people ahead of the game is exactly what this man does.

He uses the past to predict the future.

It was by looking back 90 years to the 1929 crash and subsequent depression that Andrew Pancholi forecast this present economic downturn. His readers were prepared.

He is a world-renowned expert in cycle forecasting and he sits on the board of the highly respected Foundation for the Study of Cycles, advising politicians, the military and a host of professional institutions.

Staying ahead of the game is the key to your destiny. You will know what to prepare for next.

Protect your assets & capitalize on significant profit making opportunities.

"ANDREW IS PRESCIENT. I FOLLOW HIM."

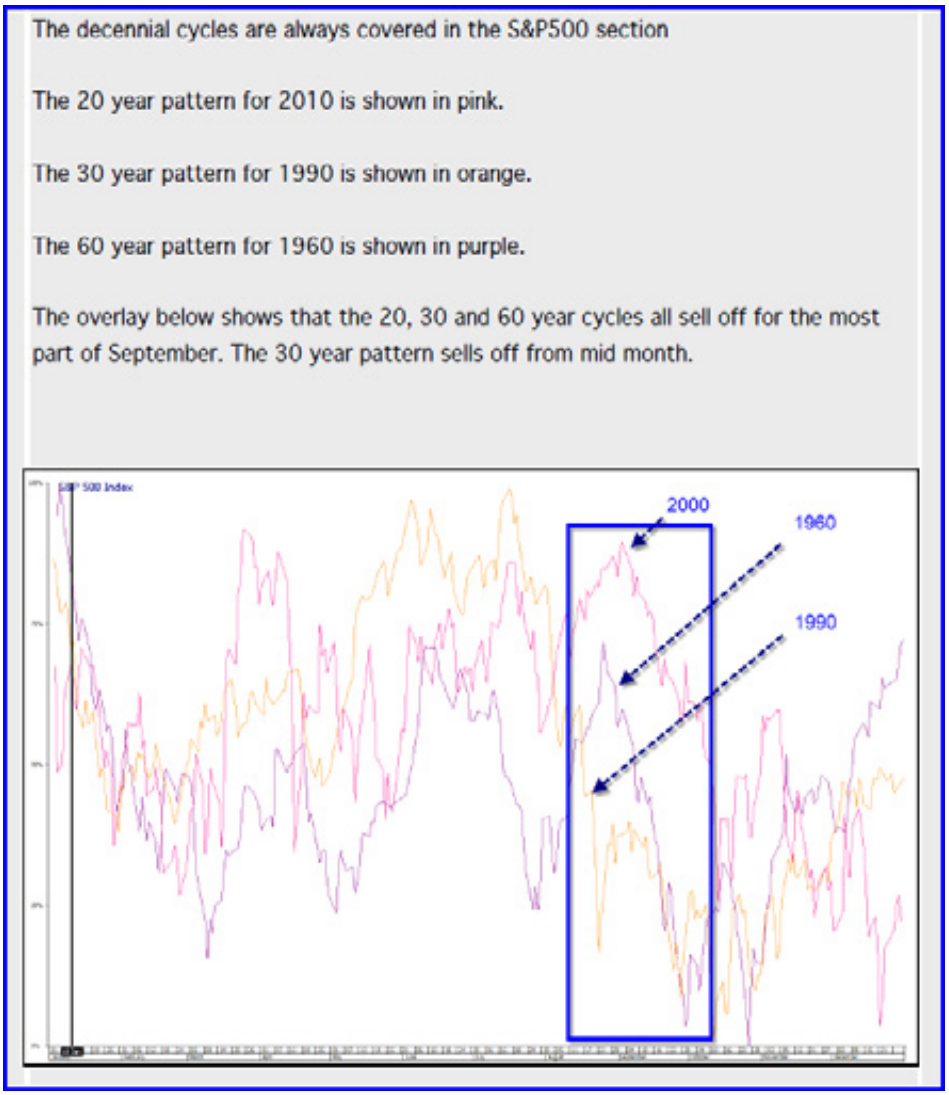

-BRADLEY ROTTER, VENTURE CAPITALIST, INVESTOR, ENTREPRENEUR & CRYPTOCURRENCY PIONEER

How The Market Timing Report Benefits Traders and Investors

The September 2020 edition of The Market Timing Report went out to followers on the first day of the month.

They were forewarned of the down turn in the S&P500.

We showed how important cycles were overlaying suggesting that a significant sell off was about to take place - take a look at this graphic that was published in the MTR.

The 20, 30 and 60 year cycles all sold off. Those of you who are familiar with forecasting techniques and the work of W D Gann will understand the importance of these cycles.

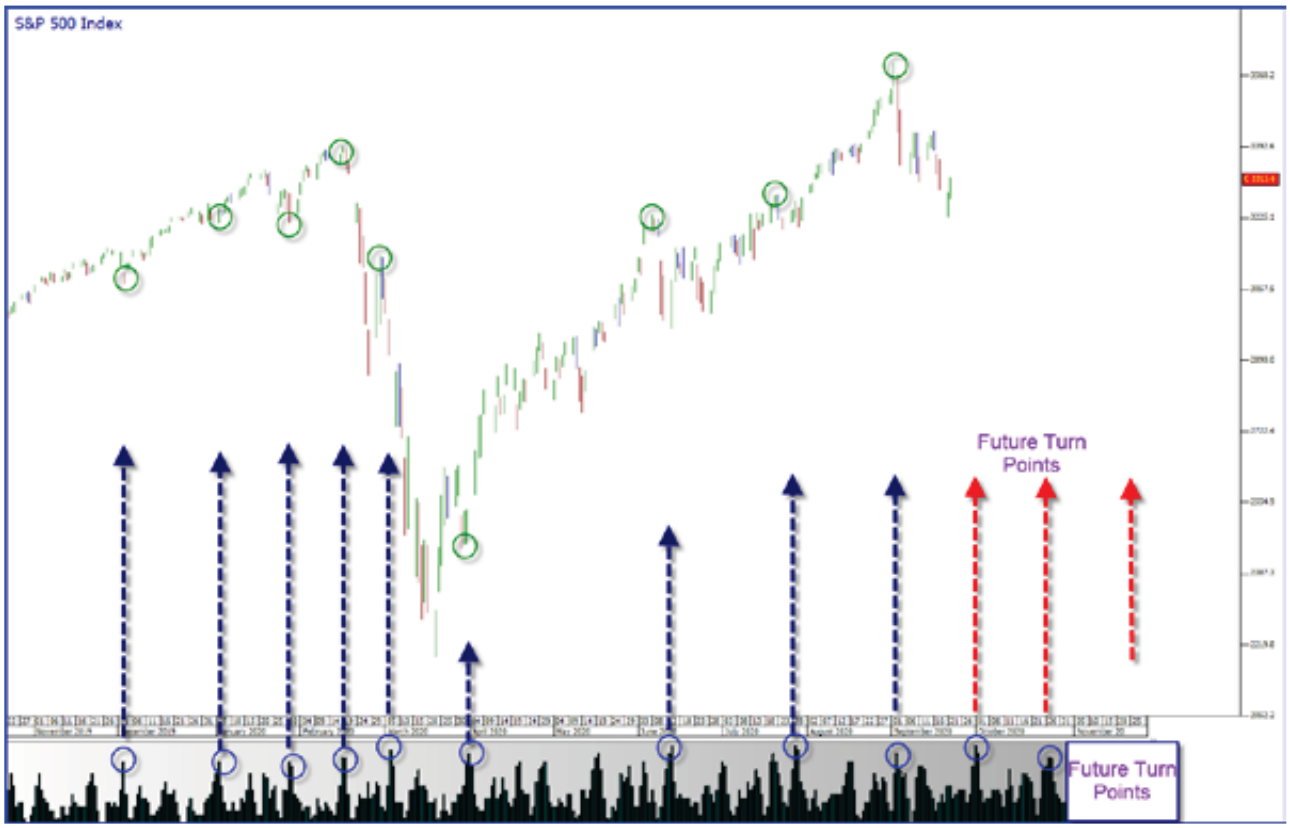

Our readers also had access to our proprietary histograms.

We have discovered what we believe to be a kind of market DNA. This helps us to identify time windows in different time frames when markets are likely to change direction.

We display these “energy spikes” under each chart in the form of histograms.

Where we see the histograms spike, there is a high probability of the market changing direction. On 90% of occasions we see a reversal and on 10 % of times, we may see an acceleration.

Take a look at these daily histogram cycles for the S&P500.

At the bottom, some spikes are circled in blue. You will note that the market reversed at these points.

Most importantly these are predictive. In other words we know these spikes in advance. The red arrows show future turning points. This is very valuable information to traders and investors.

Whilst the chart above is powerful, we can gain an even greater edge by comparing these daily turning points with other time frames.

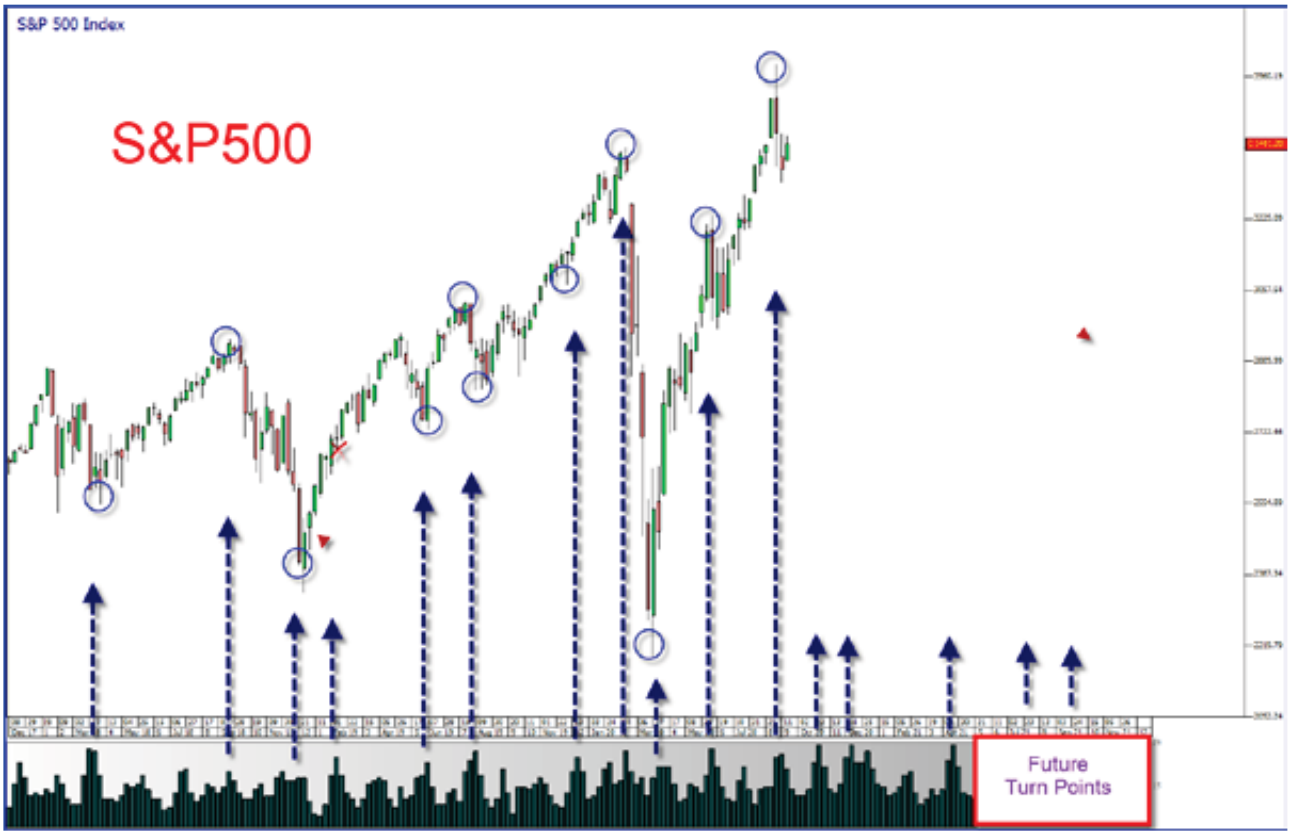

Below is a weekly chart.

Again see how the histogram spikes have coincided with major turns. Indeed future cycle turn points on this are already unfolding into 2022.

Once again we saw a major cycle spike for the beginning of September 2020.

Given that a weekly cycle histogram peak was combining with a daily cycle histogram peak AND we see that the 20, 30 and 60 patterns are all pointing down, we were all on alert for a sell off.

Our followers have done well.

The Market Timing Report covers the S&P500, Oil, Gold, Dollar Index, EUR and Bitcoin.

We publish these histograms and also clearly state the key dates so that you have all this information at your fingertips.

Again, our readers were prepared for the gold sell off that has started as I write this article.

Not only do we look at markets, we also look at geopolitics – this forewarns followers of what may be coming up.

The September edition carried this story stating that an attempt to take the life of the US President may take place in September.

This is exactly what happened during a certain cycle recurrence 45 years ago when two attempts were made on the life of President Gerald Ford.

Neither were successful.

On September 19th 2020 a package containing the poison Ricin was sent to President Trump at The White House.

Start your 28 day trial today and you'll pay just $97 for the first month of your subscription. The value compared to every other newsletter out there should be self-evident.

If you're happy with your subscription at the end of your first month, simply do nothing. Your subscription will be automatically renewed for another month at $97.

The trial offer means you pay up front, but you can get your $97 back at any time in the first 28 days if you decide The Market Timing Report is not right for you.

> I have been a follower of Andy's cycle analytics for many years and I find them very helpful in positioning my portfolio in the markets. The 90 year cycle has been very important, especially given the longest bull market in history and the fact that the '*elastic band of the markets*' was already very stretched, and Andy's work enabled me to remain alert get mainly into cash before the markets turned. Knowing when cycles are likely to occur is essential trade decision assistance information and part of a balanced approach to the markets. Thanks for your knowledge and your great work Andy!
>
>  **John J Morris,** FX Blue

> I have followed Andy's work for 18 months now and I am astounded by his knowledge of the markets, in particular the analysis of economic cycles. It has completely changed my outlook on trading for the better, from the analysis of the charts to the execution of the trade. I now use a combination of market cycles, chart geometry, Andrew's Pitchforks and Commitment of Traders data. I feel that I have much more probability on my side, which is the aim of the game! The MTR Trading Course is the best and most executable system I have ever seen. I have made significant returns with safe risk management.

Forced Profits

by Joel Rensink

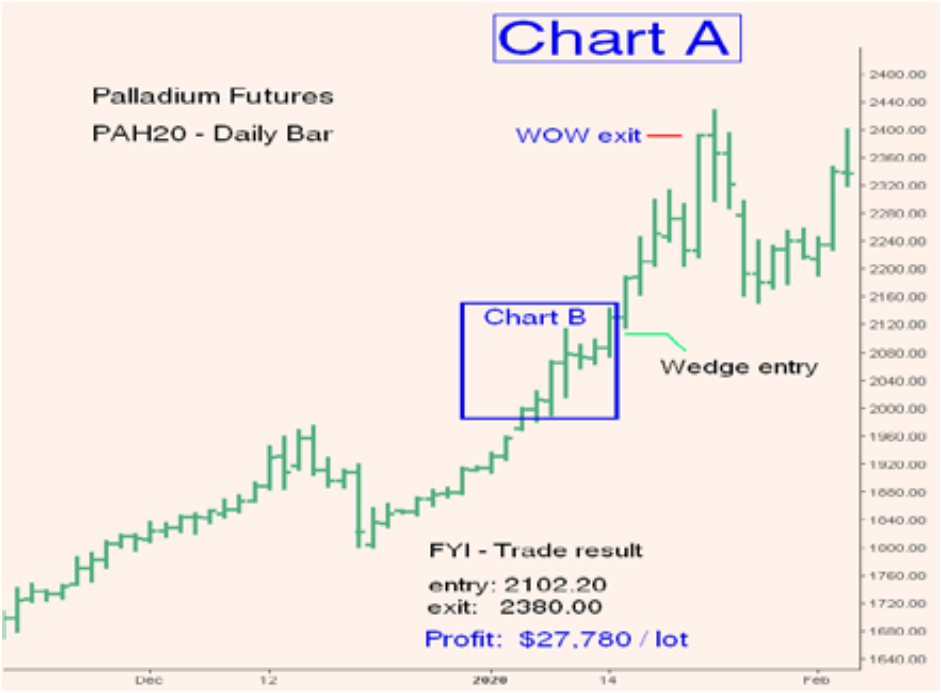

"There are two times in a man's life when he should not speculate: when he can't afford it, and when he can."
--Mark Twain

Considering how well most speculators end up, Mark Twain was pretty accurate. He must have known more than a few traders in his day.

After years of surveying the human cost in this business, I've concluded that most people trade for excitement and a chance for gain. **A minority choose to trade only when there is an opportunity for "forced profits".** A market situation which has to resolve itself in such a way that there are limited options for the market to move. Due to actual needs of major market participants, high-probability setups can occur.

In January 2020, before the China virus and all its influences wreaking havoc on our continent, I was enjoying coffee at one of my favorite haunts.

My charts blown-up on my laptop, one of two younger guys who I overheard talking about their latest tech-sector stock buys – glanced over and said, "Pardon me, sir, but what stock is that?" On my screen he saw a daily chart indicating a sharp move higher, in fact; the chart had higher closes 14 days in a row.

After informing him that it was a precious metal traded in the futures market – Palladium, he asked, " How in the world do you trade something like that?

My answer, "Very carefully." As I just clicked on a new order to buy a couple of contracts.

Matt and Andrew then eagerly disclosed that they'd been trading stocks via a phone app on **RobinHood** (https://r0binh00d.c0m) for the last 6 months with some great wins and some nasty losses. They'd been sharing ideas between themselves and devouring various online stock-tip sites.

When they found out that I'd been trading actively for more than 40 years (that made me wince at the realization...) they were extremely curious about what things they could research. Even though they were both "underwater" a bit, capital-wise – they'd experienced just enough action and great results to make them believe that they were just on the cusp of going "pro".

I recommended for them to watch both **Wall Street** and **Wall Street: *Money Never Sleeps*** to get an idea of what really goes on behind the scenes in stock and futures trading. Perhaps the details are exaggerated a little bit for interest's sake – but not far off the mark.

In ***WS: Money Never Sleeps,*** at 30 minutes into the movie – there is a perfect speech (IMO) by Gordon Gekko to a college class about the dismal financial situation of the next generation,

THEM. Not at all rosy, but accurate.

He started by saying, “You're all pretty much f##ked.”

He continued, “You don't know it yet, but, you're the NINJA generation. No Income, No Job, no Assets. You got a lot to look forward to.” (sarcastically....)

He went on describing how his “bartender” has 3 houses that he can't afford – bought with “no money down” and the students' parents who had houses for awhile – borrowing against them with low interest loans and buying plasma TVs, computers, SUVs and other properties – because everyone knows that “prices of houses in America always go up, right...?”

And more of the same truths about our current economy. It could've been written in January of 2020.

Whether that's helpful to anyone reading this here – other than a reaffirmation of what we already know; it, at least, made it out into the mainstream in a format where people may recognize it.

Matt, in particular, thought those facts were specially pertinent to his situation.
He is 20, lives with his parents; has a full-time job at night, and can't see the benefit of going to college when everyone he knows that did – can't find decent work.

Trading from home during his free mornings sounds like the perfect solution to him. Make tons of money, drive a flash car – and hang out with beautiful blondes.

(Note: Matt actually said the above.)

I tried to discourage both Matt and Andrew from getting any further involved in trading. (A real killjoy! After losing dozens of acquaintances when I was younger by spewing the gospel of “Trading” to anyone interested --- I know for a fact that if you can indeed discourage someone from the idea of trading for a living, you've done them a huge favor. I don't believe it is possible to discourage someone who actually has the will, ability and desire to take on this incredibly bittersweet curse of an occupation. **But even that isn't enough to succeed....**)

I briefly told them some of my horror stories of incredible volatility when least-expected and least-affordable. Recounted the times I couldn't get filled on crucial trades when/where I should because trading platforms failed to execute properly. **(Cost a year's profits.)** How it felt to experience 40% drawdowns in a 7 figure account I managed for “outside” money with the principals calling me every few hours for weeks on end. About a killer sequence of 21 separate 5-figure losses **(in a row)** in coffee before a winning outsized trade that recouped the losses in 2 days and continued higher for more than a month.

The solitude facts of winning and losing – having to take complete responsibility for the losses and receiving very little credit for the winners. Setting aside substantial resources for paying my own overhead, and inevitable taxes at the end of each year. And when you prove your mettle enough to manage money – additional fees, lawyers, accountants and employees. And then finding out the added complications were not worth the additional hassle after a few "flat" years.

And this cycle continuing for decades while you take 90,000+ individual trades executing methods that are light-years from "sure-things".

After I was done, even I was sobered by it all.

Made me reassess why I still trade. Made me realize again the pure satisfaction of successfully assuming and controlling risk in the world's largest balancing-acts. Knowing that you can get better each time....

Matt still was interested. I wrote down a list of books he might want to check out and names of some people to research. I'll list them below.

And, I suggested that both of them investigate setting up a self-directed Roth IRA.

That goes double for anyone reading this in the USA who plans on retiring someday. More about that briefly.

Nobody ends up being a profitable independent trader for more than 40 continuous years without some correct over-riding principles or plan or concepts working for them.

Not that my concepts or plans are perfect by any means. I am a seriously flawed human like most – but year-by-year I've been getting a little bit better at containing risk and letting profits run. That's the benefit of experience. Being able to say, "I've seen this before." And profit from the experience.

Your potential for success in trading is more about how you think and plan than the specific methodology you end up with.

"No plan survives first contact with the enemy". Helmuth von Moltke (Prussian military commander) (1880)

It is fairly impressive that this undeniable truth is attributed to Helmuth who revolutionized warfare for more than 100 years while considering that "speaking very little" was the height of intelligence.

Trading involves having a concrete plan for success which is flexible enough to take advantage of new edges that show up while you're plugging away following that plan

.

Whether you are 20 years old or 60, there is a built-in advantage to monetize human behavior that gives you an incredible edge. The best one I know of.

To quote a mathematician buddy I hang out with, **"People always overestimate what they can accomplish in a year, while they underestimate what they can accomplish in 10 years. "** This is a huge advantage for those who understand it.

It has to do with the widely underestimated magic of compound growth. *Perhaps it isn't considered as important in the classroom as making kids study the 58 gender options identified by ABC News.*

"Compound interest is the eighth wonder of the world. He who understands it, earns it; he who doesn't, pays it." *Supposedly from Einstein.*

Compound interest works whether or not you you completely understand why it works. I'm not going to go into a long (but interesting) diatribe about the different possibilities of using compound interest.

I'll introduce a valuable scenario which can get your thoughts going, or help some younger relative to a **unique benefit** that's particularly available to Americans. **One of very few these days.**

– What follows is not a financial recommendation of any sort. Just a possible opportunity for some:

It's about the use of a **Self-directed Roth IRA.** You may be able to use one for stocks, futures trades and even real-estate transactions. Depending on your circumstances and the firm you set it up with. That's for you to research.

The value for you about the **Roth** is that, if you have one – you can put a certain amount in your **Roth** every year from after-tax income. The funds now in the Roth can compound uninterrupted until retirement. [Under current law]

"A Roth IRA has fewer withdrawal restrictions than traditional IRAs. Transactions inside a Roth IRA (including capital gains, dividends, and interest) do not incur a current tax liability." [ref:https://en.wikipedia.org/wiki/Roth_IRA]

If you're able to start an account with $1000 and increase it at the rate of just 20% per year by trading or other transactions allowed; adding only $1000 a year to the account....

… and keep this up for 30 years....You should have approximately $2,180,000+ in the account for distribution at retirement. Free of taxation because you started with after-tax capital. Thank you, Senator William Roth.

Start when you are 20 and keep it up for 40 years....You should have approximately $15,900,000 + in the account for distribution at retirement.

Do your own research, in case some circumstances have changed.

Find a compound interest calculator to check other possibilities that might seem reasonable to you.

If you have the ability to self-direct your account's assets for an average annual return of even more than 20% – great!

I've known many independent traders (stocks and futures) who've averaged more than 25% annually for 40 years, and option traders who've averaged 30% for many years. And I've known real-estate investors who've bought and sold numerous properties and property option contracts through their **Roth** with gains exceeding 100% in a given year.

I wish the program had been available to me when I first started trading. Government taxation always cuts severely into the "long run" of compounding for any serious trader. And the reason why the "best" CTA firms are off-shore funds where taxation issues are moot.

Do some investigation into the **Roth IRA** possibility. It costs nothing to investigate. For a current trader, this might mean trading two different accounts, with appropriate growth plans for each one.

A bit complicated? Yes. Worth it? Only you can determine that. Long term compounded gains without tax reductions is a great definition of a "holy grail". Supply a reasonable longer term robust trading methodology and make your life less complex.

The palladium trade I took the morning I met Matt and Andrew turned out profitable. Either way, I had no choice but to take it.

One of my key trading setups involves finding and trading the strongest/weakest market in a sector (in this case, precious metals). Once discovered, I wait until there is a pause and determine if there is a low-risk, high probability entry to join the existing trend.

In this case, the strongest precious metal at the time was palladium and a relatively low risk entry (considering the strength of the trend) was found in the form of a wedge breakout. Since palladium never backed up after my entry, the risk of the trade was rapidly transferred to the

market and by the end of the day I raised the stoploss to break-even. 7 days later the market exploded higher in the highest volatility yet for the move and I sold both contracts on the close. What I've named a “WOW” exit. (If you are inadvertently are forced to utter a “WOW” while watching a trade in play – you exit a portion or all of an existing position. I'll probably discuss this powerful phenomena in a future article.)

Ultimately, palladium went even higher ($2750+/oz) but I was content to get my piece. I appreciate a 15:1 trade anytime!

One of the most valuable things I've ever learned about trading is the fact that the easiest profits are obtained by buying in areas of low volatility and selling in areas of high volatility. It works in stocks, futures, options, you name it; all free markets, even real estate. As long as you have a method of identifying and controlling your risk – you are good to go.

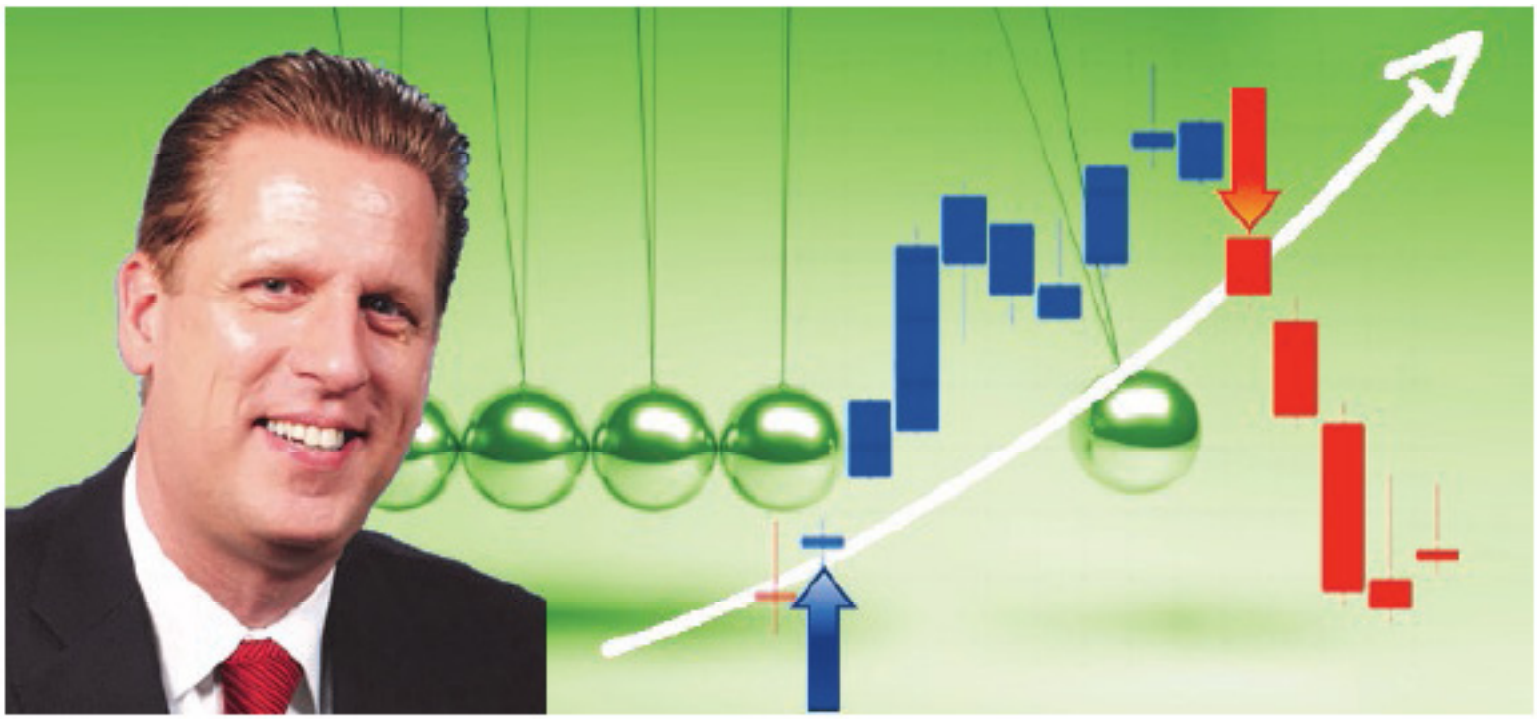

Joel Rensink

PS: Here's the short list of books and traders I gave to Matt and Andrew to check out for ideas. It isn't an exhaustive list, but useful to anyone who's chosen to make this business their own.
Books:

- Hit and Run Trading – Jeff Cooper
- Diary of a Professional Commodity Trader – Peter L. Brandt
- Trading Commodity Futures with Classical Chart Patterns – Peter L. Brandt
- Trading Systems and Methods – Perry J. Kaufman
- The Slight Edge – Jeff Olson
- The Compound Effect – Darren Hardy
- SuperTrader – Van K. Tharp
- Fortunes Formula – William Poundstone

Traders:
Stanley Kroll
Nassim Taleb
Edward O. Thorp
Curtis Arnold
W. D. Gann

Algorithmic Trading and Investing

Stocks, Options, Futures, FOREX

SOFTWARE
See high probability trade set-ups right at your charts.

Trading and Return on Investment (ROI)

By Thomas Barmann of
NeverLossTrading

Summary: In this article, we are discussing what is needed for producing infinite returns from trading or investing. Impossible? Read on…

Trading or investing endeavors can be very entertaining; however, we want to focus on treating them as a business, striving for returns: best by multiple streams of income.

Why to invest? For achieving a return!

In simple terms, you want to make a profit or a return on investment (ROI):

ROI = Net Profit / Total Investment

However, an investment also carries a risk. As a trader or investor, you have ways to control the risk while you are assuming the potential return, its probability, and the likelihood of the risk or loss.

You act as a probability thinker which re-writes the formula to:

$$\textbf{ROI} = \frac{(\text{Probability of X-Profit} - \text{Probability of X-Loss})}{\text{Total Investment}}$$

The difference between a trader and an investor is only in the time of holding a position; the decision-making process is the same.

As a trader or investor, the most you control in this formula is the amount of risk you are accepting. Unfortunately, many traders/investors do not even operate with risk-limiting strategies; however, we highly recommend doing so for preventing drawdowns or high-risk mistakes that might catapult you out of the trading/investing business.

The profit in the equation results of a simple calculation:

The difference in the entry to exit price = profit/loss.

On the investment part, we generally differentiate between a cash or margin basis.

The basic trading account is a cash account where you can only invest your holdings. Margin accounts allow you to leverage investments with the brokers' money and/or apply trading strategies that are not allowed in cash accounts. If you borrow money in a margin account, you need to pay interest and add this to the cost of the investment or numerator of the formula.

The probability and amount of profit you assume shall be spelled out by your trading system. The maximum risk to accept shall also derive from the trading system; however, this alone is not sufficient; you need strategies on hand that limit your risk, under all circumstances.

Let me give you an example of how such a system can help you to define risk, reward, and probability right from the chart.

For guiding you there, let us spell out a couple of definitions first, explaining our way of thinking and acting:

- For having a tool on hand that expresses the expected price move, we developed what we call: SPU (Speed-Unit), a measure for the most probable price expansion from entry. The SPU is measured bar-by-bar and expresses a most likely price expansion after the system conditions accept a trade condition.

- The NLT indicators spell out a price threshold: buy > or < sell. We only enter into a position if this threshold is surpassed in the next candle. Such, we can use buy-stop or sell-stop orders for entry.

- We assume a system probability of ≥ 65%, which results in an assumed failure rate of ≤ 35%, all dependent on the indicator.

- The dot on the chart defines the exit.

- The risk, in simple terms, is defined, entry to stop, while in reality, we are preventing gap risk by applying risk-limiting trading strategies. Stops vary indicator-based.

- The system also defines a maximum time in a trade: one to ten bars, depending on the triggering indicator.

AMZN Swing-Trading on the NLT Top-Line 4h-Chart

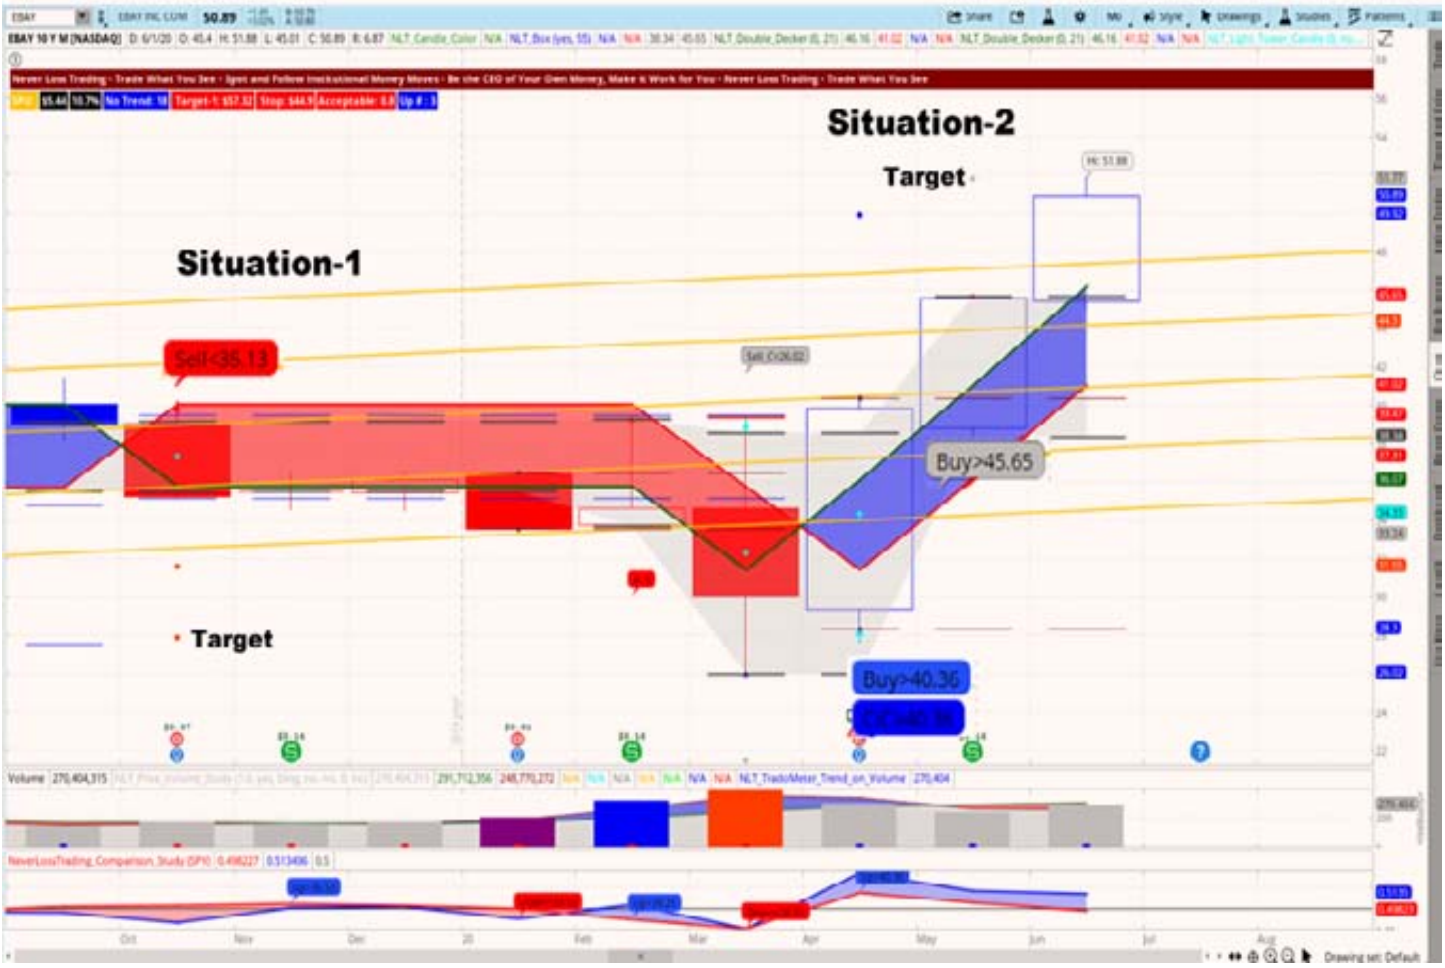

The chart shows three trade situations; we now want to discuss and evaluate, explaining the decision-making process.

AMZN Chart Situations Explained

Entry Rule	Signal	Trade Target and Stop	Result
Situation-1 Buy > $2700	Blue NLT Power Tower Buy Signal	Target: $2769 (max. 10-Candles): $69 Profit Potential Stop: $2663 $37 Risk	Favorable Reward/Risk setup. High probability signal (70%): • 2.6% return on cash • 5.6% return on margin • In two days.
Situation-2 Sell < $2688	Red NLT Power Tower Sell Signal	Target: $2666 (max. 5-Candles): $22 Profit Potential Stop: $2760 $72 Risk	Unfavorable Reward/Risk No trade or applying a strategy that puts reward and risk in your favor.
Situation-3 Buy > $2743	Blue NLT Power Tower Buy Signal	Target: $2848 (max. 10-Candles): $105 Profit Potential Stop: $2674 $74 Risk	Favorable Reward/Risk setup. High probability signal (70%): • 3.8% return on cash • 7.6% return on margin • In two days.

Next, we pick a longer-term investment example:

EBAY on the NLT Top-Line Monthly-Chart

You see two trade situations with the following interpretation and actions:

EBAY Chart Situations Explained

Entry Rule	Signal	Trade Target and Stop	Result
Situation-1 Sell < $35.13	Red NLT Power Tower Sell Signal	Target: $27.75 (max. 10-Candles): $7.38 Profit Potential Stop: $39.50 $4.37 Risk	Favorable Reward/Risk setup. High probability signal (70%): • 4.8% return on cash • 9.6% return on margin • In five months
Situation-2 Buy > $45.65	NLT Trend Catching Signal	Target: $52.00 (max. 3-Candles): $5.35 Profit Potential Stop: $38.20 $7.45 Risk	Acceptable Reward/Risk; however, you better apply a strategy with a more favorable reward/risk setup. We teach those in our mentorships.

Our examples shall explain that we are acting and encourage you to act mechanically at pre-defined trade situations, leaving very little up for interpretation.

Most traders operate with a random decision-making base and believe they can make $100,000 investing $100.

Think about what is wrong with this relation?

As a private investor, you have limited funds, and you need to find a way to get to high probability trading, else you will not be able to produce consistent income from trading.

By our definition, high probability trading starts at or above being right in predicting the future price development of an asset ≥ 65%.

All our systems work on all time frames and for all asset classes. We are just taking some examples here to demonstrate how we put mechanical and rule-based trading in action:

E-Mini S&P 500 Futures, 2h NLT Top-Line Chart

This chart contains a lot of information. The rules for accepting a trade or not might be overwhelming at first; however, see them as traffic rules and signs: you learn them, and quickly, your acting on them will be a routine.

The critical message:

- Rules can be learned. In the NLT Top-Line program, we work for 20 hours with you and coach you for three months to make sure you are acting according to the set of rules we comply with.
- Trade situations are repetitive, and the system spells out continuous opportunities.
- When you act on time frames that are not in the middle of volatility, you give yourself more time for making structured decisions (like on a 2h chart).

Trading System and Returns

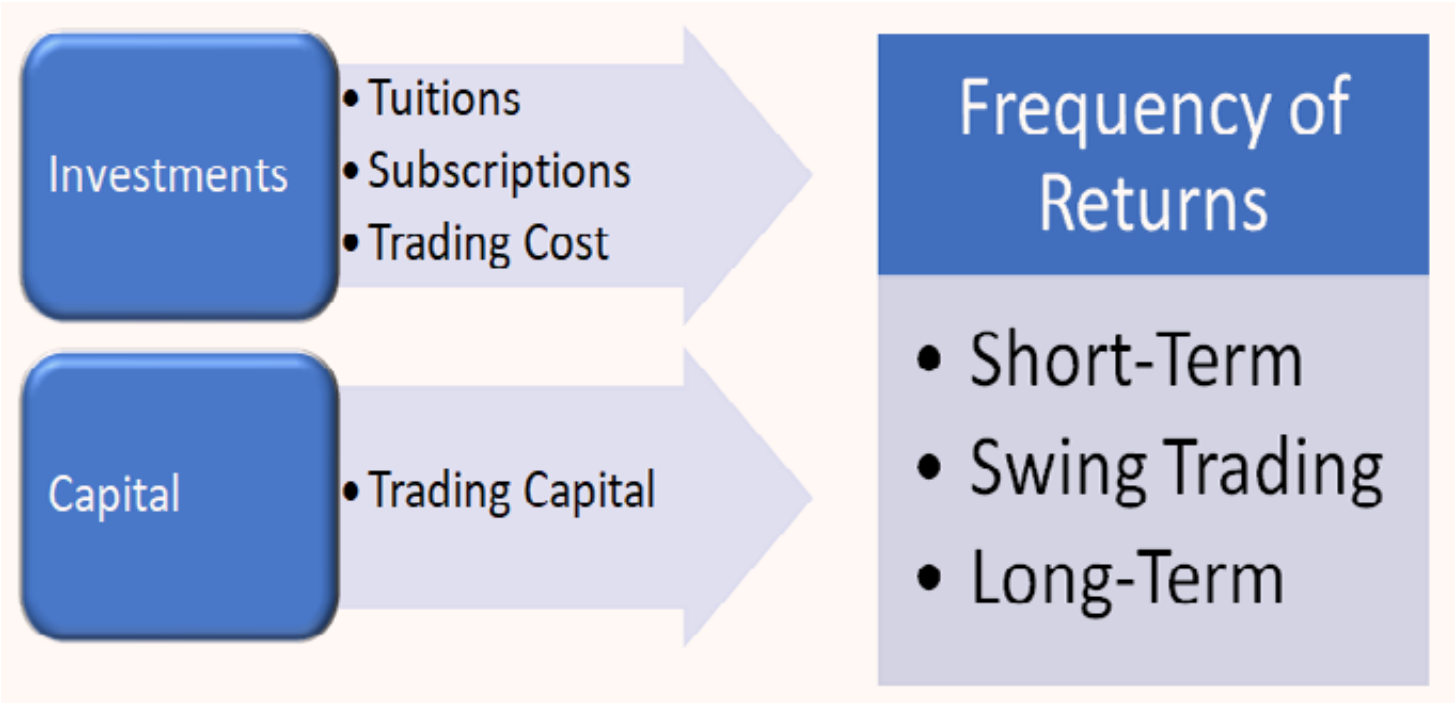

A trading system is basically a productivity tool: Productivity, being a measure on the efficiency of income production:

Productivity is the ratio of output to what is required to produce it (input).

Let us list and compare the input and output variables:

Input and Output Variables for Trading Returns

Input **Output**

Have you ever heard about **Infinite Returns?**

Those are achieved when you no longer have any of your own money **invested,** but you still own the investment, and you are still generating income from it.

It sounds strange, doesn't it?

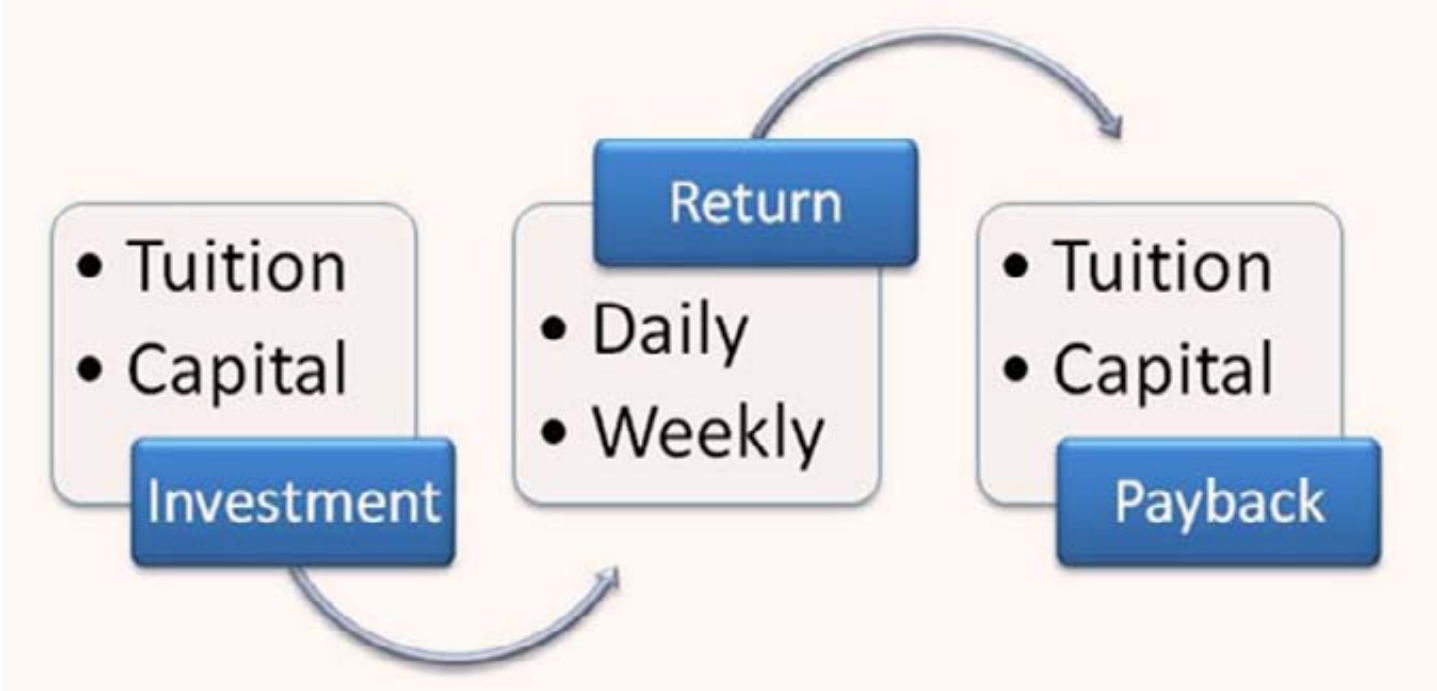

In an industrial environment, it would be that you produce items/output to sell with a machine that is written off and has no maintenance costs. Usually, those machines are unproductive compared to new ones, and thus, the infinite return is minimal.

However, financial assets do not depreciate, and infinite returns are achievable. Let me specify how:

An Infinite Return is achieved when all investment costs and the capital invested is recuperated, and steady returns are still made.

In simple terms, when your returns are higher than your base capital and the tuition paid for learning to trade/invest.

Infinite Returns in Trading/Investing

There are two key influencing factors for producing infinite returns:

Capital Engagement Rate: How much of your capital is engaged for producing returns: Generally, we strive for an 80% engagement rate, keeping 20% cash for special occasions and trade repairs.

The capital engagement rate for various assets differs significantly and is determined by the amount of risk you want to accept per trade.

Average Return on Capital measures the achieved return over the total investment capital:

ROC = Net Profit / Total Capital Held

Let us calculate two different trading target scenarios:

- **Trader-1**, day trades, and swing trades:
  - o 40% invested in **Day Trading**, 0.5% return/day, 200 days a year.
  - o 40% Invested in **Swing Trading**, 2% return per month, ten months per year.

- **Trader-2 is a longer-term investor with a 3% return per month at ten months a year.**

Let us assume, both traders hold $100,000 and invested 10% into trading education tuition and calculate the time to infinite returns, considering compounding interest.

Trading Investing Return Expectations Compared

Investments	Base	80% Engagement	Trader-1	Start Capital	Year-1 End Capital	Difference	Trader-2	Start Capital	Year-1 End Capital	Difference
Base Capital	$ 100,000									
Investment Capital	$ 90,000	$ 72,000	Day Trading	$36,000	$ 97,615	$ 61,615				
Tuition	$ 10,000		Swing Trading	$36,000	$ 43,884	$ 7,884				
							Long-Term	$72,000	$ 96,762	$ 24,762
Total					$ 159,498	$ 59,498			$ 114,762	$ 14,762
Return on Capital						59.5%				14.8%

The calculation shows that both investors will be able to recuperate the tuition expenses in the first year and make additional returns. Trader-1, with a higher trading frequency, is producing by far higher returns than Trader-2 and Trader-2 will reach infinite returns in year four.

This simple calculation shows that the more frequent trader has a much higher return expectation.

In summary, when you strive for a fast way to infinite returns, your system has to give you:
- Frequent, high probability trade setups.
- You need to participate with at least 80% of your capital in evaluated chart setups.
- Invest percentage-based and compound interest.

From our experience, the average payback time on NLT tuitions varies between two and six months, and we are here in our coaching programs to help you to get there.

With this article, we want to offer a small group of people (no more than 20) a knowledge exchange, where you tell us what you want to reach and which assets you prefer, and we give

you feedback on what is possible.

Now the catch: We do this free of charge but need to limit the number of conversations we offer.

If you want to be part of this program:

contact@NeverLossTrading.com and Subj.: Knowledge

We are more than ten years in business and provide systems, strategies, and more in our education programs to help people reaching their financial goals through trading or investing. We cannot give you a guarantee that it will work for you; however, we are looking back at a solid history of producing independent traders and investors, teaching one-on-one only, focusing on your specific wants and needs.

ROI and Asset Classes

Returns from trading and investing are based on multiple variables or choices to make. The first critical determining variable for producing ROI is the probability on which you can predict the future price development of an asset.

The first critical determining variable for producing ROI is the probability on which you can predict the future price development of an asset.

Conventional systems based on moving averages, RSI, MACD, etc. have a ≤ 55% probability, and you will see why they only lead to random success.

Let us replicate a statistical model of two bags of 20 marbles: One with 13 winners and seven losers (65%) and one with 11 winners and nine losers (55%). When we draw and put the drawn marble back and compare with the appropriate math, the expected statistical outcome of achieving six or more winners, we see:

Table-2: Probability of ≥ 6 Winners at 10 Draws (Bernoulli Experiment Statistics)

Winners	65% System	55% System
6	23.8%	23.8%
7	25.2%	16.6%
8	17.6%	7.6%
9	7.2%	2.1%
10	1.3%	0.3%
Sum	75.1%	50.4%

The table shows that predicting with a 65% likelihood gives you a 75.1% chance to achieve six or more winners, while a 55% likelihood only gives you a random chance of 50.4% to win more than you lose.

Unsuccessful traders have a history for repeating what does not work, and the randomness of the model above proves them right: They win every now and then with the way they are acting, just not enough to make a living from it.

As humans, we are determined to our cognitive dissonances: we want to be right and prove that we were; however, this can be very, very costly for you. Instead, be open for a change and invest in the right system and knowledge basis, rather than losing money to the market.

System probability is just one key determining variable, but there is more to consider:

Example of Determining Variables for Trading ROI

Let us start with the choice of an asset class from:

- Stocks
- Options
- Futures
- FOREX

To compare different asset classes, let us pair them with expected average returns by time in a trade, with a focus on Stocks, Options, and Futures based on a Capital of $5000 and a risk tolerance of 3% or $1,500/trade.

Position Holding and Trading Styles

Capital		$ 50,000
Max Risk per Trade	3%	$ 1,500

Trading Strategy	Return per Trade	Risk per Trade	Investment per Trade at 80%	Positions for 80% Engagement at 3% Risk	Capital Employed	Avg. Days in the Trade	Trades per Month	Monthly Return Extrapolation at 65% Winning
Day Trading Stocks	1%	1%	$ 40,000	1	$ 40,000	1	30	9.0%
Swing Trading Stocks	2.5%	2.5%	$ 40,000	1	$ 40,000	5	10	7.5%
Longer-Term Investing	5%	5%	$ 20,000	2	$ 20,000	20	4	6.0%
Swing Trading Options	55%	90%	$ 1,500	26	$ 1,500	5	20	85%
Long-Term Options Trading	60%	80%	$ 1,500	26	$ 1,500	20	5	55%
Day Trading Futures (/ES)	8%	8%	$ 7,500	3	$ 7,500	1	20	48%
Swing Trading Futures (/ES)	20%	20%	$ 7,500	3	$ 7,500	3	7	42%

The above table tells us:

• Day trading stocks allows investing the entire capital per trade, and you stay below the risk tolerance. When you win 65% of your trades, you are striving for a 9% return per month.

• The longer-term investor shall split positions to stay in the spelled-out risk tolerance per trade and strives for a 6% monthly return.

• Options traders can strive for very high returns, and so can Futures traders by investing in leveraged assets.

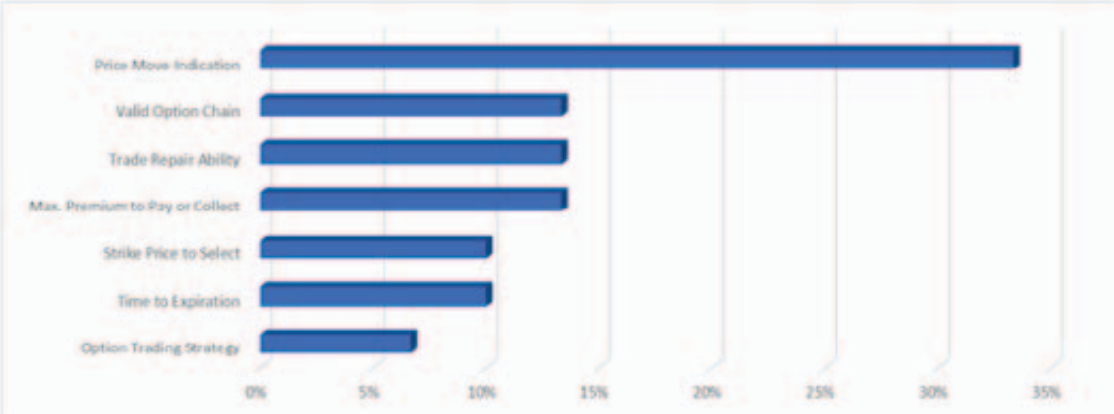

When striving for high returns like the options and future example, the following considerations need to be made:

There is only a limited number of futures available for meaningful trading. The associated risk to futures position can be extremely higher than anticipated in the base risk assumption. We work on meaningful and balance futures portfolios with clients who subscribe to this style of trading.

Options, even so, they offer extraordinary return opportunities, have two key challenges to manage:

• When accepting a 3% risk tolerance, you need to be able to find, manage, and maintain 25 open positions. Meaning, you have to find and continuously open and close them. When you break it down into 20 trading days per month, it requires one to two trade on an average day and makes it much more manageable. Read below; we make you an offer of catering those opportunities to you for free.

• Options trading requires skill and experience in defining the following decision-making parameters:

To provide you with more insights, check our white paper that shows how we combine NeverLossTrading indications and intraday options trading activities. In essence, we help you finding trading and investing opportunities when they develop intraday. Read the details on our blog…click.

Would you like to get options trading opportunities delivered to your inbox for free?

No credit card needed, just a legit name and email.

To be part of this and write us an email with subject: TW#78 Options and we get you the NLT Options Alert for free and show you how to put it in action:

contact@NeverLossTrading.com

Now that you experienced what is needed for producing consistent return on investments, the question is:

Can you get this all done on your own, or do you want to invest in a proven system and coaching program that helps you to turn yourself into the trader or investor you want to be?

We call our education programs mentorships and teach at your best available days and times. We work with you for a pre-determined timeline and guide you with after programs.

TradeColors.com is our entry-level program, offering:
- An easy-to-follow, high probability trading system.
- The possibility of a short-term payback on your tuition.
- The ability to upgrade to NeverLossTrading mentorship at a discounted rate.

In our latest publication, we referred to examples of using TradeColors.com for short-term trading, and you find the article on our blog…click.

TradeColors.com also works on longer time frames.

We are blogging and sharing content for more than ten years, and we helped many traders and investors to produce consistent income from the financial markets.

The charts we shared on EBAY and AMZN were based on the NeverLossTrading Top-Line program, our flagship offering, and most sold mentorship. Here we work with you for 20 hours, providing:

- Server-installed software
- Real-time data
- Entry, exit, and stop, right on the chart
- Position-sizing models
- Time-in-a-trade per indication
- Risk-handling
- Business Plan (financial plan and action plan)

When you are part of the 20 people we offer a knowledge exchange to, we go with you through the chart setups by symbol and time frame you call and count the winners and losers, and you will experience what a high probability trading system can do for you.
There are multiple dimensions of value we provide to our clients. Let us formulate in a value-based analysis what such a mentorship, such as NLT Top-Line, can give you:

Value-Based Analysis

NeverLossTrading Mentorship Program Values	Estimated Value
An easy-to-follow investment concept that spells out: 1. When to enter and exit a trade. 2. How to leverage and protect your assets. 3. A clear concept to pick securities that are ready to invest in: Stocks, ETF's, Mutual Funds, Commodities, Currencies, Options, Futures. 4. How to make money regardless of the market direction: up, down, sideways. Your goals depend on how much time you can dedicate to trading the financial markets.	Goal: Monthly, Weekly, Daily return of 1% to 5%. Minimum 5% above your prior returns.
You take home: 12 or 15 ready-to-be-used, proprietary NeverLossTrading indicators to trade the market direction by a one-time license fee only.	$10,000
Twenty hours of personal training and coaching at the rate of $400/h, with focus on trading/investing system-based in all your accounts: 401(k), IRA, Cash, Margin.	$,8000
Three months of NLT Alerts and help with trade-finding and execution.	$3,000
Knowing how to operate a free trading and charting platform based on our proprietary indicators, with top-notch functionality. A free service, comparable to other trading platforms were you would pay $100 a month.	$1,200
The best rates for trading stocks, options, futures in the markets because you belong to NeverLossTrading. Making your expensive broker obsolete.	minimum $1,000
Documented trade summaries to repeatably train skills, setups, situations: 1. Tutorials explaining all indicators and setups 2. Clearly formulated trading plan 3. Excel-based trading journal with analysis tool A comprehensive overview not to be found in any book store.	minimum $1,000

We are more than 10-years in the trading education business, teaching one-on-one at your best available days and times.

Trading our own account day-by-day and helping clients lets us provide long-term experiences and support.

Customer service and tailored mentorships are our virtue.

Basing your trading and investing decisions by defined rules is learnable, and we are here to support you!

Easy does it.

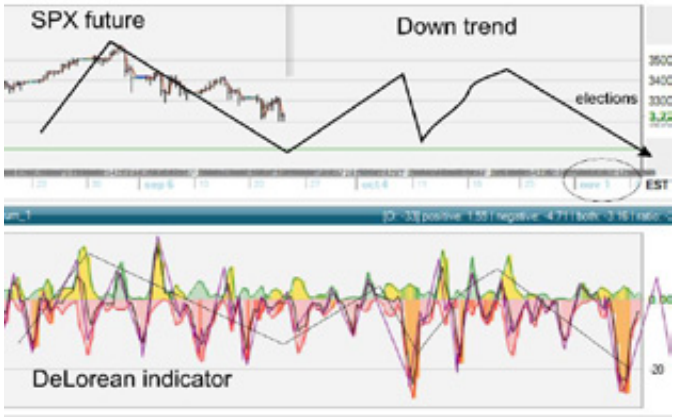

Time bomb

Rick Versteeg

Would you like to know the trend of NEXT YEAR in advance?
Of course you would! You need to protect in case a BEAR market is around the corner. You need to know IF and WHEN a bull market will come again.

You can do so at a relatively very small price. Try it this time! Not only markets but also society and economy as a whole will be affected.

Time is running and ticking. The long term Time patterns forecasted a deep recession and war like situation in 2019 as well as a decline of around 30% before it happened. It aint over yet! The next leg down will be coming soon. Even worse, a TIME BOMB is developing. Our time patterns give a sneak preview of what is ment to happen with regard to the (market) trend and social environment, so prepare. **Now we have entered A WAR time pattern as has happened several times in the past. Consequently society will experience the same parallel events again and dark times are ahead**.

NEW offer! Preorder!
Order NOW DeLorean 2021 Outlook
https://aquilaesignal.com/product/preorder-delorean-outlook-2021/

DeLorean indicator trend direction for every day trading only EUR 195,-

https://aquilaesignal.com/product/delorean-indicator-daytrading/

Seemingly governments are in control. Yes they are, but they make it worse in the end. Firstly because they have no clue what they are doing or how the economy or markets work. Secondly because all are (indirectly or not) bribed by their ideology or money and will thus not be able to make proportional judgements using Science and insight. Thirdly government are concerned with their self interest in the end and the power they want to keep, so they forget about the people they originally represented.
All institutions (like FED, ECB, IMF, World bank, WHO), all continents and countries are planning and plotting all the time to increase their influence. We have the Rothschild, Bilderberg, New world order, Soros, Climate activists etc. It could be true ideology, often idealized, but mostly it is about power and money. They all exert influence from time to time, but will never be in full control (of the world). You can name it conspiracy theory or not, but it is all part of the game where power changes hands. From Germany to UK, to USA, to China and so on. From Democrats to Republicans and back. Whatever the outcome of USA presidential election, both will make happen what is meant to be. Sometimes it brings peace and harmony, other times crisis. They all think they are in control, but they are not. There is no control whatsoever.

In view of the TIME PATTERNS the future is set. These TIME patterns apply globally, it is an 'energy' that goes around the world. Whatever conspirators plot, it does not make a difference but adds to the outcome that is more or less inevitable. The Longer term Time patterns repeat themselves over time showing highly correlated patterns and related events. Consequently Society, economy and markets will show parallel trends in line with previous times when lookalike time patterns occurred.
History repeats itself. As shown in our DeLorean 2020 outlook (published December 2019), recession, violence and epidemic/ infected behavior was imminent. Having studied ages of history, how it unfolds and what time patterns are presented during compatible historic events, has convinced me that humanity as a whole cannot escape their fate. Good times and bad times will come, but individuals can prepare and stay away from the madness of crowds. You could be the exception to the rule to learn from history.
Last article: ***The question is not IF but WHEN trouble will happen***.

Time patterns: What the future has in store for us.

Researching historic time patterns, we found for 1st half of the year 2020 a high correlation with time patterns of the years 1930-1931, predicting a severe recession and crisis. Additionally we expected a market correction of at least 20 but more likely 30% in line with these years.

For a much longer term TIME pattern from 2018, including 2020 and beyond our TIME patterns software found the highest match with 2 historic time patterns. These 2 patterns are both WAR and CRISIS patterns, because of the social disruption that took place.

The first pattern is from 1917 to 192?. So what did generally happen during this period in the most powerful countries? The time patterns are applicable globally to the strongest nations and vested interests.
Main events:
- Many strong regimes completely lost power. Germany in Europe, the Tsar and elite in Russia. The USA took over from the UK as the strongest nation.
- Spanish flu 1918
- Revolution and anarchy was common as well as many (political) assassinations
- Civil war, terrorism, polarization and violence was a global tendency.
- Communism and Marxism was on the rise. Communists took over during the Russian revolution leading to The Soviet Union in 1922. In China Mao started Chinese communist party, but did not take power yet. In Germany Hitler was on the rise as in the Marxist Nazi party. Also in the USA communists tried to take power but did not succeed.
- all these new left wing parties that took power in name of the people ended up to become a dictatorship and fascist regime later on. Tens of millions of lives were wasted.
- censorship and propaganda as always during crisis times or change of power
- economy was in between a recession or depression or even ruined with regard to Germany.
- financial markets were in distress and stock indices suffered heavy losses.
- madness of crowds and of governments. Also order troops everywhere like the nazi Brownshirts.

Another longer term TIME pattern that has the highest correlation is the period from 1938 to 194?.
Main events were:
- Governments seize full power
- war globally with Germany/ Italy and Japan.
- freedom of the people were restricted. Curfew, lockdown, mandatory army or work enlisting, hiding for the enemy
- government takes over, war economy determined and funded by government as well as way of life of the people, taking away freedom. Mandatory participation in army or factory work.
- Violence, crisis everywhere and locking up people in camps and razzia's
- government sacrifices the lives of their own people or of the enemy, leading to loss of tens of millions lives.
- financial markets in distress and stock exchanges minus 50% at least, hyperinlaftion in Germany.
- economy in severe recession until war economy took over
- censorship and propaganda, opposition eliminated.
- madness of crowds, of governments and order troops

The main question : *in what stage are we now looking at these patterns? When will the economy and markets reach their lows? When will better times arrive? Read on to learn more…*

How do we know the future?
We have a database of historic **time patterns** back to around 1700. These are correlated with current time patterns to find a match. So, our software came up with several high correlations, see below. Parallel trends, social events and markets will repeat time and time again as more than 10 years of research shows. Social events have their own signature in the pattern waves.

History repeats itself

What stage are we in this crisis pattern?

TIME patterns show is that we are in the 2nd stage of the long term pattern.

The pattern NOW at work is a hybrid of the 1918-192? and 1939-194? pattern. The first stage of the pattern NOW started in 2018, marking the top of the market, setting of a decline in beginning 2020. Corona epidemic and fear set in as well as a sharp correction of more than 30%. Next the economy turned down as fast as not seen many times before because of government commanding a lockdown. During this sub pattern often terrorism is rising and infections of any kind sprout, creating more fear, crisis or polarization in countries or between countries. For example in 2001 twin towers 9/11 and SARS happened during previous occurrence of these patterns as well as (political, literally or proverbial) assassinations. In 1918 we had the Spanish flu, and probably poisoning of president Wilson, in 1962 and further assassination of Kennedy and Cuba crisis. In 2018 there were several attempts threatening the president.

We already have witnessed many more parallels of terrorism, Antifa, polarization between black and white, looting, burning down cities and so on in the first half of 2020. Not to mention the fight between Democrats and Republicans, where Democrats will desperately use all means to win the US elections. We already are on the verge of a civil war. The lockdown because of a pandemic that is not a pandemic according to its normal definition, is ruining economy and freedom of people, meeting more and more resistance.

Europe is no better place to be. UK and EU are getting nowhere on a trade deal, mainly because the dictatorial EU is not respecting the autonomy of UK after Brexit and not inclined to make any compromise whatsoever. Don't be surprised if the verbal war changes to a real war, for example over fishing territory. Governments are infected by the "madness of crowds", locking down the country and taking away the constitutional freedom of people. In addition immigrants are flooding (invited by) the EU as their mercenaries, creating havoc in many countries, which begins to look alike the invasion of the Nazis in Europe long ago.

Order troops that need to protect the citizens, are acting violent against their own and protecting or not acting against immigrants, who are also protected by judges. Demonstrations the EU governments do not like, are stopped. They tried to do so recently in Berlin, but luckily, the court in Germany ordered not to interfere with the right of demonstration. Contrarily, immigrants, climate and Black lives matter demonstrations are allowed. Just like in the USA, resistance is growing. More and more, governments act in line of EU planning, which is not agreed upon by the people of the EU. Additionally several governments are on the verge of accepting laws that put parliament aside, which will be the beginning of a dictatorship using Corona as an excuse.

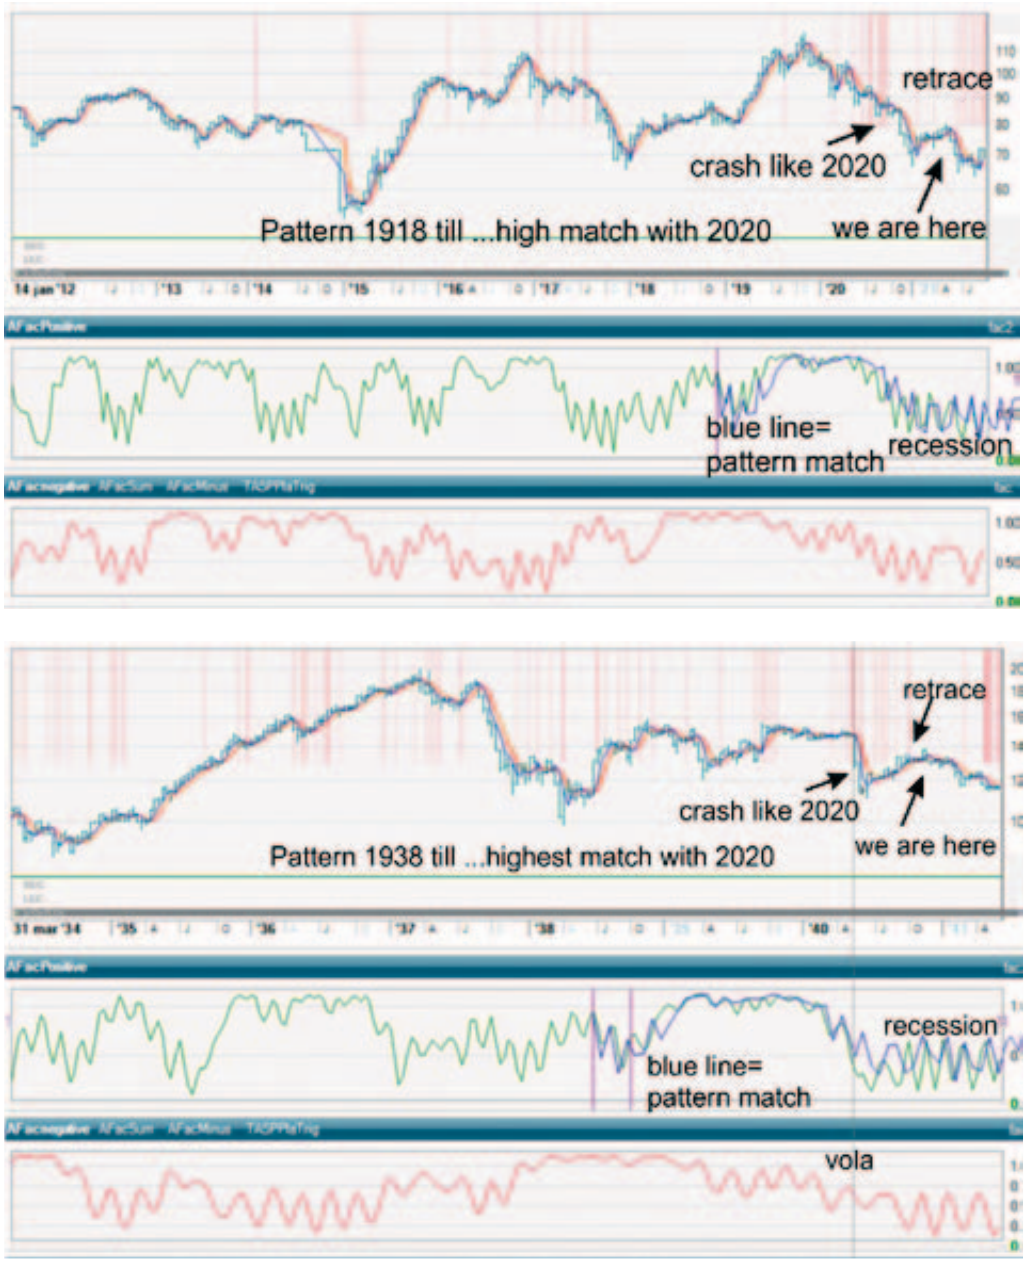

The chart above shows the pattern at work now until beginning 2021, but it continues far beyond. The topping, crash, reversals and recession have all been predicted before it happened. Retrace of around 60% from lows were indicated. Now we have a full retrace from where markets will decline to previous lows! Please note that the indicator under chart predicts social events and direction only when shorter term triggers and indicators confirm. DeLorean indicator SPX will show you these. DeLorean indicator becomes very negative the coming months. YOU NEED TO KNOW UNTIL WHEN THE PATTERNS OF 1918 AND 1938 ARE VALID in order to preview OUR FUTURE.

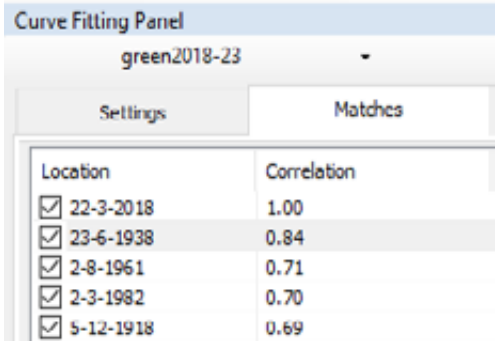

The red bars are time pattern clusters that point out larger **reversals,** even very important tops and bottoms, like in 2020.

In 2018 a pattern began – high plateau for around 1 year- that is a *lookalike of 2002-2003*, causing its first crisis beginning 2019 and decline in 2020

Comparing 2020 and beyond to historic patterns with highest match

Above you can see how much the Time patterns are alike 2018 and beyond, but 1938 has the best match with correlation of 81 %. 1918 is still comparable but more out of line with regard to markets. Markets and events are expected to follow mainly the 1938 scenario.

Future outlook

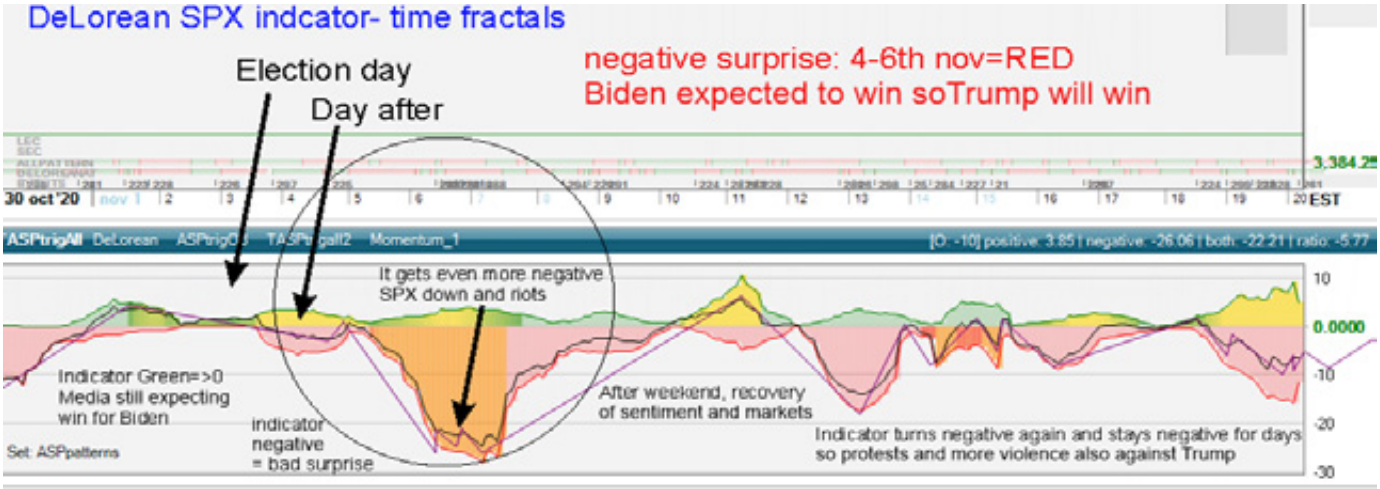

- Markets will decline a lot, starting now, target SPX minimally 2000 to 1800.
- economy declined already 25% on average. This will rise to 50%
- Corona will be used to create dictatorship and new regime in EU.
- if reset/lockdown continued, economy is at risk, wipe out of financial system, already on life support, in Europe possible. In Europe a civil war between immigrants and natives on its way. Opposition of the people against EU
- expect capital flight to US$ and implosion of EUR as a result of which EU could crumble. Reset of financial system as a result.
- Trump will win if protected well
- risk of Biden being replaced
- whatever the US election outcome, neither side will accept losing the elections. The left side already did not accept the previous outcome in 2016. This time the result will be anarchy from activist organizations. People will start to defend themselves which could lead to civil war between black and white as well as democrats (left) and Republicans (conservatives)
- Reset of political order can be expected, either to the extreme left or restoring law and order.

Next stages in the Time pattern for our future

The second stage, which we are entering now, marks a period where the government seizes control of society, taking away the freedom of citizens. Fear sets in and madness of crowds and governments is taking over. The above description shows already clearly the parallels between the other periods of crisis and what is happening now. These TIME patterns are a fascinating way of foreseeing the future and being able to prepare.

Unfortunately the worst is still to come before the good times arrive again. The third stage is (civil) war of some kind, suppression, complete lockdown and forcing measures upon citizens, like vaccination. This has already begun in EU , Hong Kong and Australia for example, China and Russia have not been a democracy for a long period of time. There will be a dogfight in the USA between Democrats and Republicans. Expect violent times to come. Easily this could lead to a civil war where one side tries to maintain law and order and the other side tries to disrupt the country. Same happens in Europe, more violence every day. What is happening worldwide is that left extremists are trying to gain control which is a coordinated action in the EU and will be joined by Democrats and left wing extremists in the USA if possible, helped by the propaganda of Main street media. Abolishing the old fossils economy in favor of green energy, defunding the police and resetting the system, economically and politically, at all costs. The problem is what it will look like when the reset has been finished. If this is not the reason for a dark future then the financial problems are around the corner, less for the USA but especially for Europe. Low interests rates have destroyed bond markets as well as pension funds. The system could completely collapse when confidence in the EURO has disappeared. Once the currency is not trusted anymore, this is the reason for hyperinflation again.
Over time we will notice the parallels and being negative but realistic, let us still hope for increased cooperation in countries internally as well as between countries. If order, law, democracy and freedom is maintained the future looks less bleak. The 4th stage will normally show resistance and freedom as a result, which will spur economic growth again.
Time patterns forecast also better times later on so society as we know it, will prevail in the end. A positive pattern for growth and confidence shows up in the future, not yet the strongest but it is a good beginning. If you like to know when our indicators, Long term as well as short term are turning up again, then you need to buy our DeLorean preview 2021. Additionally for exact timing you need our DeLorean indicator.

DeLorean indicator
This indicator shows day to day the trend of the markets. Not knowing the news, we do know the energy, positive or negative that will be at work during a certain day or period. If this energy is positive markets normally go up if negative down. Also a negative indicator will bring news that will shake the vested interests or give some negative surprise news. Using the indicator this way, we forecast, just like in 2016, that Trump will be winning the presidency or there will be some other shock event related to it. Biden replaced or Trump replaced as candidate for example. Because the indicator will be mainly in the red for a longer period, we expect disorder and anarchy in line with our long term time patterns. Below you will find the indicator for the USA election period together with an explanation what it predicts.

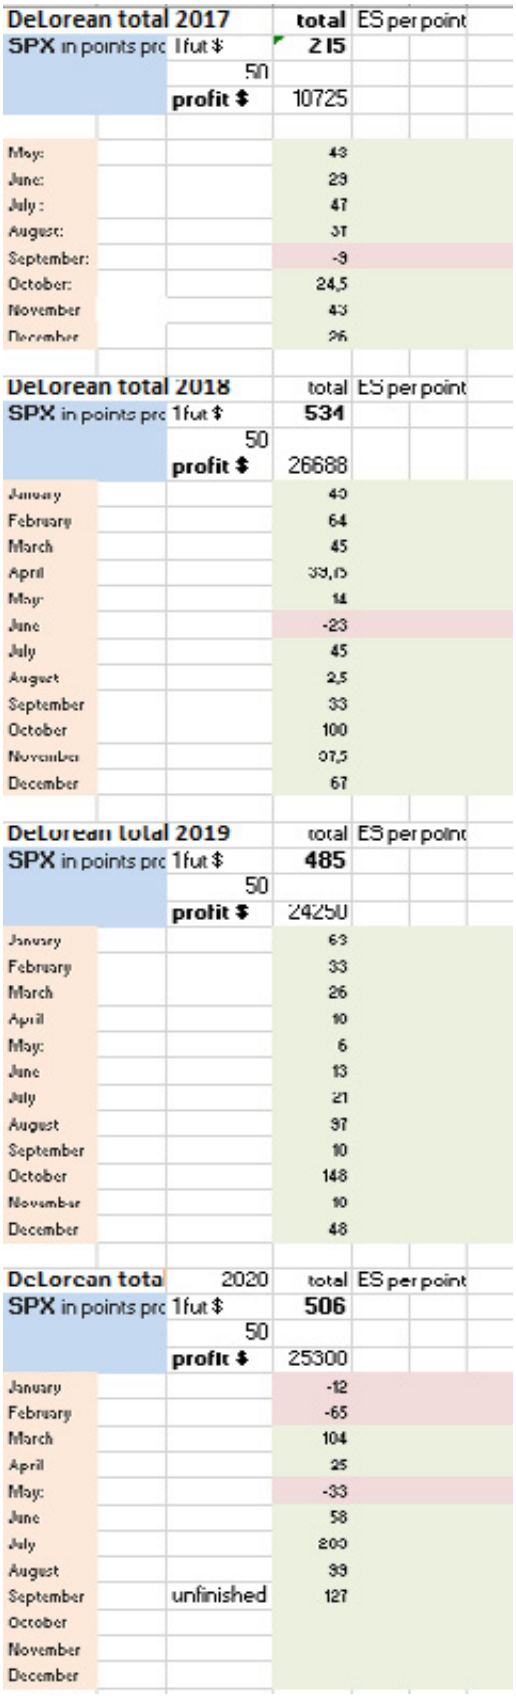

This indicator we also use to predict the DeLorean OPEN with excellent performance as shown on the next page. Last year was more difficult but still really good results and relative low drawdown.

DeLorean indicator shows calculation of indicator for the period around USA presidential elections on November 3, 2020. Clearly the day after elections the reading is weak and gets very negative the 5th and 6th of November. The next 2 weeks it stays negative apart from a recovery 9-10 November.

Just like 2016, when we predicted a victory of Trump, we again see red indicator after elections. Red is negative, so a bummer for vested interests, Main street media and an outcome that will not be accepted nor cheered. Some say Biden could still win, however that is only theoretically. Like in 2016 the polls say he will win, well the polls are heavily biased and do not include the silent majority. Actually the reading of the outcome is so negative that anarchy is possible or a last minute event with regard to Biden or Trump.

How to select the appropriate cycles for forecasting

by Lars von Thienen,
www.whentotrade.com

Back in February, before the recent market top occurred, I published some real-time daily charts in the Traders World Magazine #76 on page 104ff indicating a cycles top for the month of February, while explaining some cycle knowledge. The decline occurred only 2 weeks after the article. I would recommend reading this article again as it contains educational knowledge about the use of cycle analysis.

In a private conversation with the magazine's editor, and after the markets followed and revived the predicted February downturn, Larry asked me on May 18: *"Lars, based on your cycle program, what is your analysis of the S&P?*"

I pulled up the following chart and wrote back: "*We could expect a sideways to upwards moving market into the summer period, forming a top around July/August. Then turning the direction …".*

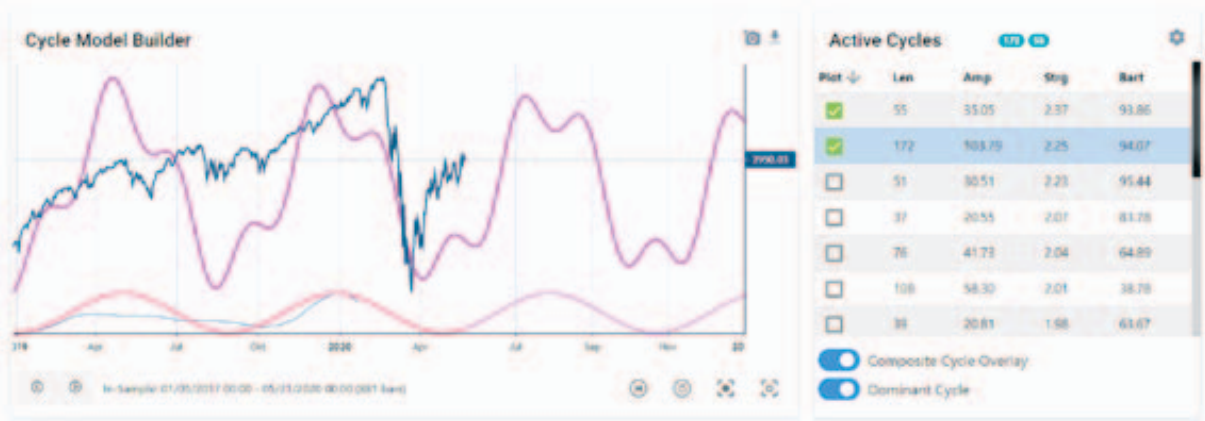

Chart: S&P cycle analysis done May 21, using cycle with length of 172 and 55 days, predicting a top between August-September.

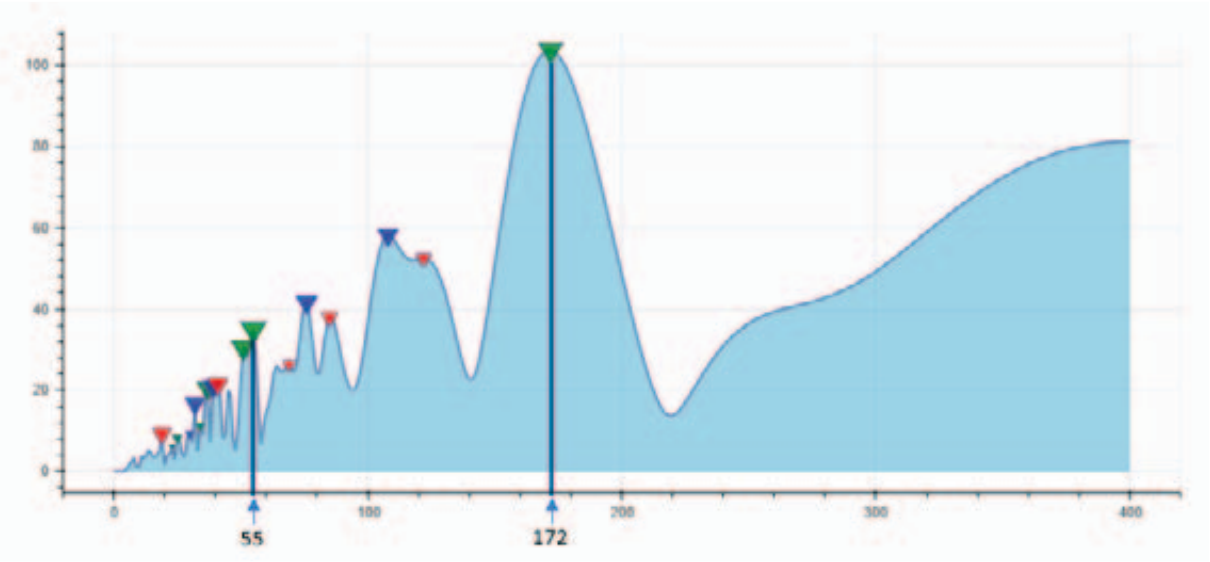

Today, we know the outcome. The market rallied through August and peaked on September 2, just as the cycles predicted. However, this article is not intended as self-praise. It is intended to recapitulate the power of the cycles, and therefore I would like to explain further basics of how I came to the choice of exactly these cycles back in May.

So, let‘s use this example to explain why to chose the cycles with a length of 55 and 172 for the prediction at that time.

The Cycle Spectrum to detect all possible cycles

We use a special form of Fourier analysis to detect active cycles in a data series. There are many possible algorithms that can be used to apply cycle analysis to data series. So, you are free to choose which tool set you want to use as Fourier framework. The approach explained here would be the same.

This cycle analysis generates a so-called spectrum plot. This spectrum shows all possible cycle lengths on the x-axis and the corresponding amplitudes on the y-axis. To detect cycles in the data set, you select the peaks in this spectrum. Each peak in the spectrum represents an existing cycle in the underlying data set. These peaks are marked by triangles in our spectrum diagram.

Fourier spectrum plot: S&P daily spectrum analysis, May 21 2020

This spectrum shows many peaks. So which cycles (=peaks) should we use for a forecast? Therefore, you need more than just a Fourier analysis.

The cycle spectrum only gives you information about which cycles were detected in the data set. However, it does not tell you whether the detected cycles are “one-time” cycles with only one repetition, or whether the cycle was constantly active throughout the data set with many repetitions.

However, we would like to select those cycles that are constantly repeated in the data set for forecasting and prediction purposes. We would not select cycles that might have been present only once but could be based on a one-time effect. At this point, the spectrum analysis runs out of answers and we need additional measures.

The Bartels Test

This is where the Bartels test comes in. The Bartels score provides a direct measure of the probability that a given cycle is real and not random. It measures the stability of the amplitude and phase of each cycle during the full dataset. In this step of cycle validation, the statistical reliability of each cycle is evaluated. The goal is to exclude cycles that were influenced by one-time random events (e.g. news) as well as cycles that are not real. The higher the Bartels rank between 0 and 100 shown in the list above, the less likely it is that this cycle is random or accidental. Since we have a final percentage value, we only need to define an individual threshold below which the detected cycles from the Fourier analysis should be skipped.
I would simply recommend using a threshold value of 49%, and therefore cycles from the Fourier spectrum with a Bartels percentage below 49% should be skipped by all cycle prediction techniques.

The cycle spectrum displayed shows low Bartels values with a red triangle and good Bartels values with a green triangle.

This is an additional feature of this special spectrum as it adds further characteristics beyond the standard spectrum analysis. However, all the approaches, Fourier, and Bartels, are not hidden secrets and could be used by anyone on his own.

For this reason, I only concentrate on the cycles with “green” triangles, or as with the selection of cycles with a high Bartels value.

The Strength or Power of a Cycle

An important final step in making sense of the cyclic information is to establish a measurement for the strength of a cycle. The price influence of a cycle per bar on the trading chart is the most crucial information. Because each cycle related to the timeframe you are interested on.

Let me give you some examples by comparing two cycles. One cycle has a wavelength of 110 bars and an amplitude of 300. The other cycle has a smaller wavelength of 60 bars and an smaller amplitude of only 200.

So, if we apply the “standard” method for determining the dominant cycle, namely selecting the cycle with the highest amplitude, we will select the cycle with the wavelength of 110 and the amplitude of 300.

But let us look at the following information - the force of the cycle per bar:
Length 110 / Amplitude 300 = Strength per bar: 300 / 110 = 2.7
Length 60 / Amplitude 200 = Strength per bar: 200 / 60 = 3.3

For trading, it is more important to know which cycle has the biggest influence to drive the price change per bar in regard to the timeframe you are on, and not only which cycle has the highest

absolute total amplitude! Therefore, we would not select the cycle with the highest amplitude of 300, we would select the cycle with a length of 60 and amplitude of 200 as it has the higher strength score.

That is the to pay attention to a third measurement, the so called “Cycle Strength.”
That said, to build a ranking based on the cycles left, we recommend sorting these cycles based on their “influence” per bar. As we are looking for the most dominant cycles, these are the cycles that influence the movement of the data-series the most per single bar.

Summary – The final approach to select relevant cycles for forecasting
Start with a frequency analysis of your pre-processed data set. For example, use a Fourier analysis to obtain all relevant cycles in the data series. Then evaluate each cycle using the Bartels test to filter the valid cycles above a threshold. Third, these filtered lists of cycles should be ordered by strength, with the power of each cycle per bar. Finally, select the top 2-3 cycles from this list to create a cycle projection.

This was exactly the approach used to predict the top of the market for August around mid-May by selecting the top cycles on the list with a length of 172 and 55.

In the end, the approach is simple and without subjective selection. Once you have learned these steps, it becomes a fairly automatic approach.

As mentioned above, publicly known and accessible procedures have been used for this approach. We use this ourselves to display the Fourier results, the Bartels score and the strength value side by side for each data series with our cycle.tools platform here at whentotrade. But you could also use other frameworks that provide these research results.

Options Group Coaching Course

Review by Larry Jacobs

Dr. Barry Burns

Barry Burns has several trading courses on line at www.topdogtrading.com. He has a business background that taught him to focus on the bottom line. His studies in the financial markets main purpose was to make profits. He started the study of the markets under his late father, Patrick F. Burns who accumulated 70 years of trading in his lifetime. He also hired three professional traders to mentor his personally and even went to Chicago to work with a former floor trader at the Chicago Mercantile Exchange. All this work and study resulted into insights that led to the development of his own methodology and company, TopDogTrading.com

His contributions to the trading industry are as follows are are impressive:

- Author of "Trend Trading For Dummies" (Wiley Publishing).
- Featured as a case study in the book "Using Candlestick Charting: How To Earn High Rates of Return Safely."
- Featured as a case study in the book "Investing in Derivatives."
- Received Readers Choice Awards for "Trading Courses" and "Technical Analysis Web Sites" by Technical Analysis of Stocks and Commodities Magazine for many years.
- Author of Top Dog Trading 5 Energy Methodology Plug-in for MetaStock.
- Developed a 5 Day Course for WorldWideTraders.
- Founded Top Dog Trading, to help students shorten their learning curves in becoming traders.
- Headlining speaker at DayTradersUSA.
- Headlining speaker for the Market Analysts of Southern California.
- Headlining speaker for the Canadian Society of Technical Analysis.
- Given seminars around the country at many Wealth Expos and Traders Expos.
- The former lead moderator of FuturesTalk chat room guiding listeners through the open and close of each trading day.
- Published many articles for various outlets including eSignal Central.
- Conducted live webinar co-sponsored by the CME Group.
- Doctorate in Hypnotherapy and is a certified NLP practitioner, and therefore able to help people with the psychology of trading.
- Live webinar presenter for the Eurex Exchange.

I enrolled into his Options Group Coaching for this review.

This is an 8 week course which is self-paced so you get access to all 8 modules from day one. You go through the online lessons in this Membership web site as fast as you want to. You can post comments in this Members Area after each lesson.

You need to go through the Personal Development exercises with the lessons (CRITICAL!!!).

You need to take the quizzes after each section and make sure to review any answers you didn't get correct.

At the appropriate time in the course you'll start receiving "watch lists" for stocks that match their algorithm. Remember: This are NOT trade recommendations.

Barry uses video for the classes.

To give you an idea of this course here is how week 2 went:

1. Getting Your Mind Right
2. Holistic Approach to Trading
3. Mini-Divergence patterns
4. Bollinger Bands and Helkin Ashi
5. Bollinger Bands Settings
6. Long-Term Cycle and LRC
7. Importance Details on the LRC Settings
8. Identifying the Overall Market Sentiment

Week 5 Gets into options and continues with options to the end of Week 8

1. Introduction of Options
2. An introduction to the Greeks
3. Buying Options Chart Examples
4. Buying Options Options Criteria
5. Buying Options Complete Outline Document
6. Buying Options Checklist
7.Buying Options Examples

I found this to be a fantastic options course and is one of the best values in training. If you are starting out or even if you are experienced this is excellent value training. Barry has created a great methodology to teach trading options. I was extremely impressed with the classes and his trading approach. Barry's approach is simple but nice on how to handles and uses indicators. I have picked up a lot by reviewing this course. Barry should be congratulated in producing such a fine course.

Also, if you are interested in the options course, there are a couple of websites where you can get more specific access to the options information than his main website.

Barry offers a free 3-video mini-course on options here:
www.FreeOptionsCourse.com

If you want to get information about the main options course (the same one I went through), you can get that information here:
www.OptionsResults.com

Ten Order Flow Patterns That Help Make *Super Systems*

By World Cup Champion Trader Rob Mitchell

There are four basic concepts that can make up successful technical trading. Price Action (patterns), Momentum and Order Flow. Then you bring in Support / Resistance and related concepts like Market Mapping which can tell you what is likely in a given segment of the trading day. One less often talked about part of trading is the benefit of order flow reading and so in this article I will cover that in the way I have been doing for years. Order flow is like the pressure going through a hose and you can have order flow that is consolidative or that is associated with expansion. In the latter case it could be called order flow momentum. In the earlier, order flow trapping.

Traditional methods of reading order flow can be cumbersome. As I got older, I looked for solutions that would enable the reading of this with the absolute minimum amount of energy and inputs for interpretation to make things easy and intuitive. To accomplish this, I designed a tool that was structural. This opened the door for repeating patterns. But then we took it a step further by establishing specific probability profiles with any of the patterns so we have a solid idea of the outcome before the trade. Often these patterns are associated with specific price action (or not) and momentum patterns. In the prior issue of Trader's World (Issue 76), I covered making Super Systems and, in this article, I am elaborating and getting into more detail of these amazing patterns. In that article I also covered probability stacking and the patterns in this article certainly apply to that, so enjoy!

The Smart Trapped Trader Oscillator (STTO or TTO for short) enables you to see order flow (trapping or momentum) in a glance. We generally keep it in the second panel of our charts, so when you look at charts below, we'll be focusing on that second panel labeled TTO. We will cover 10 patterns that can be easy to see and utilize. When you combine these with other patterns, you get probability stacking for high percentage theoretical winners.

First off are the **3D Complex.** Here you get first 3 dots (**3D**) ascending or descending on the TTO going with price movement or trend. If this is followed by a line break on the Smart Break Points (SBP) on the TTO panel, you will have what we call a 3 dot break. If the bar hooks back in the original direction following we call that **3DV** (because it makes a V or inverted V shape). If it breaks the edge again and hooks, we call that **3DVE**. So it goes in order 1, 2, 3, 4. as 3D, 3DB, 3DV, and 3DVE respectively. These patterns are generically 75% to continue and will probability stack with other patterns such as the T2 (that was also covered in a prior TW article). This kind of thing is telling you there is strong structure and order flow going with. With a T2 (a momentum pattern we use), this patterning should spec out to better than 90%, especially if done where you do not already have range expansion. In other words, positioning yourself for the range expansion and staying clear in the period immediately following.

Learning to see patterns like this can be quite rewarding.

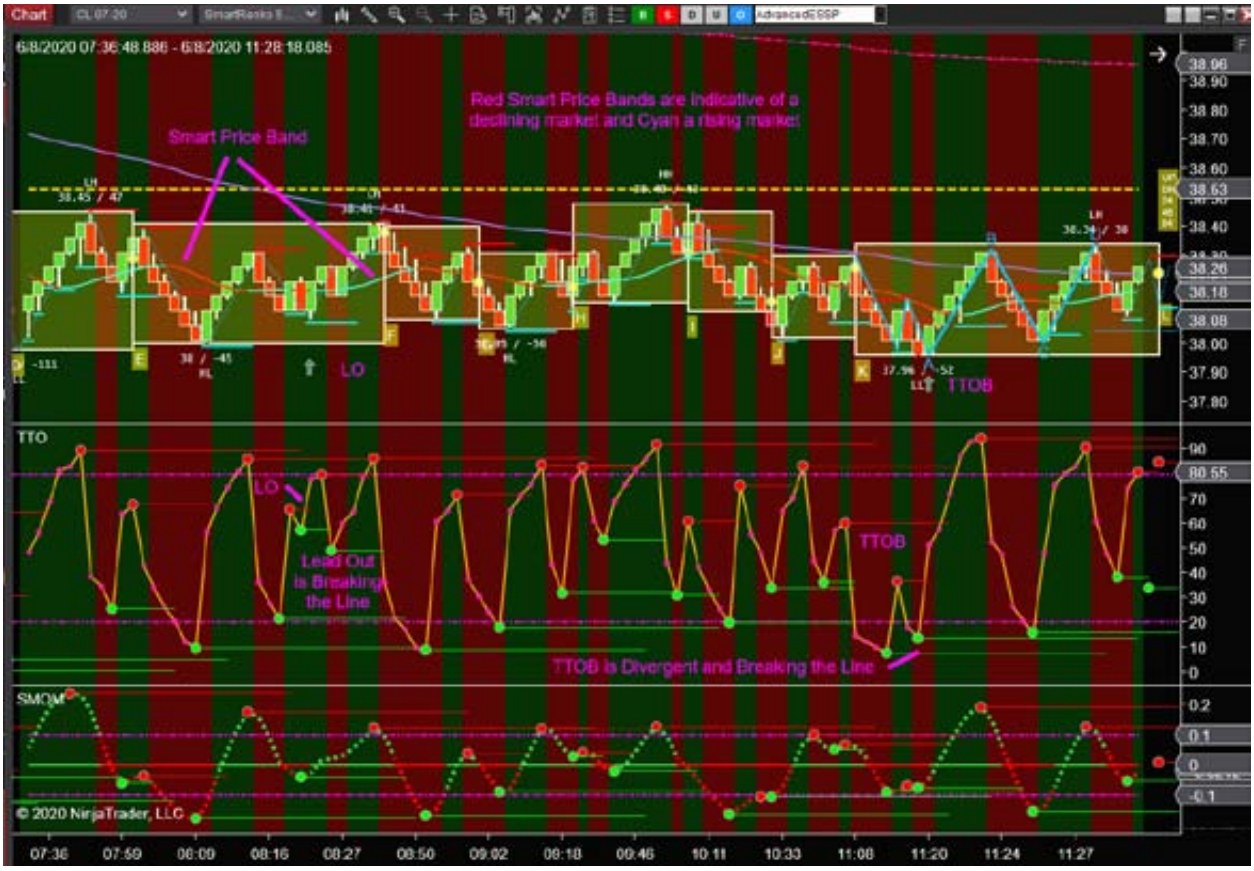

Next we have the TTOP or **TTO Pump**. This is only used with the T2 momentum pattern we have discussed in prior articles, and is where the TTO is out of bounds (OOB) counter to the direction of the trade. OOB is where you have the TTO out of the 80-20 lines on the indicator. Another form of the TTOP is where you broke two prior SBP lines on the TTO (see below). This pattern is generically 84% to continue.

Next is the Single Bar Encompassing Pattern (**SBEP**). This occurs where the TTO encompasses two lines as in the image below. This pattern shows strong order flow in the direction of the break. It is preferred with trend and in the counter trend it is often preferred that you not be against it as it can save you having the market come back into you strongly. This pattern may be considered to be about 75% generic and adds with other patterns, especially where it is with trend and not on consolidative structure as mentioned previously.

Next is the TTO Lead Out (**TTOLO**) and the TTO Box (**TTOB**). The TTO Lead out occurs where the TTO is going with price and does a line break in the direction of the trade. A TTOBox is the same, but requires a double bottom or double top in price or a 5 tick trap (structure broken by less than one complete continuation bar). These patterns are generically in the 84% are on their own and add with other patterns.

Next is the Mid Line Hook (**MLH**). This pattern is adding and is showing a continuation pattern. It occurs where the TTO has hooked the 50% line on the TTO or has hooked above it for longs or below it for shorts. It can often happen with 3D patterns and where the Smom and Smart Price Bands (SPB) colors match (which is often in a relatively high momentum situation).

Next is the Double Line Break (**DLB**). If the TTO breaks two TTO SBP lines in one bar, it is suggesting continuation in the direction of the break. Beware of being against this pattern.

Beware of any TTO patterns that are occurring on multiple back to back reversal bars (aka railroad ties or railroad tracks) or in consolidative non cycling structures where they will often be less valid). Trading with the trend and with the most likely direction for range expansion is often your friend :-) In fact, any of the patterns in this article will generally be stacked with the addition of the Smart Price Band color Any of these patterns may be used for entry or for trade management.

I only marked a pattern or two per chart. Can you identify the patterns covered on the various charts where they were not marked? Notice what happens when you do, where it is, and especially where it is occurring with the principles given ☺

Did you enjoy the kind of thinking behind the patterns in this article (and previous Trader's World articles)? Want to learn more in an applied live environment? Join us in the Oil Trading Room to discover theses patterns and more, and where they are occurring in a stacked way for ***Super System*** win percentages! The Indicators and Tools discussed in this article are available from IndicatorSmart.com

He has been a trading system developer for nearly three decades. He is a proven researcher, trading educator, presenter, and mentor helping others to achieve their dreams as traders and in life.

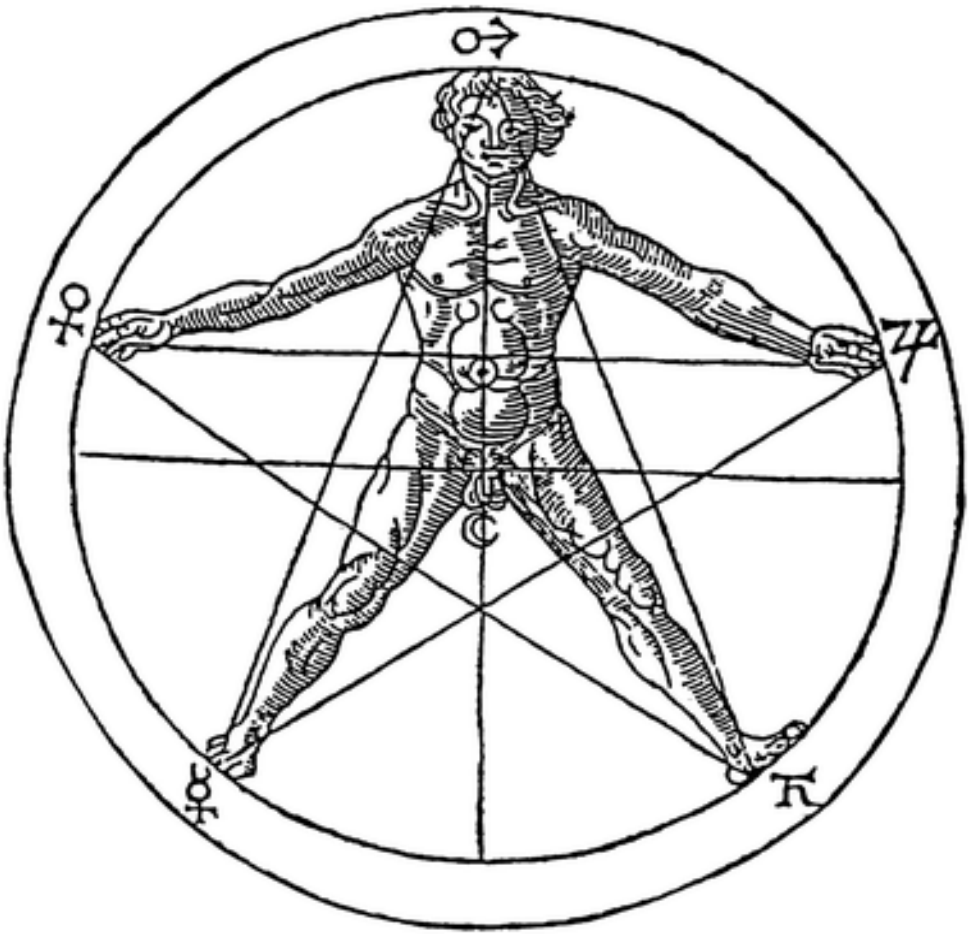

W.D.Ganns book “The Tunnel Thu the Air or looking back from 1940”.

By D.K.Burton

There are many codes in Gann’s book, these are some of the very few mentioned below. There is a lot more, more than people have ever written about. These are some of the basics. I have written many articles on this book in back issues, so some new things here are not in back issues which go back to 2004. You recall that some 20 years ago I discovered the cover was coded and I was the first person to publicity present this coded cover of 144. Gann’s important overlay of 144 which is the foundation of everything you need to know. Gann’s plane was called the “ Silver Star” and had the 5 pointed star on it. Silver is the moon and Cancer; Jupiter is exalted in Cancer and makes a square in the sky from that point. Gann’s said to study more astronomy than astrology (he never followed housewife astrology), and looking at his works, 90% is astronomy and this why astrologer’s around the world cant work out what Gann was doing. Gann used geocentric planetary lines as well as the heliocentric lines. The average of planet’s is the average of “Inverse square laws”. There are 36 chapters in the book which add up to 666, 6 x 6 x 6= 216, 144 + 72 = 216. Leonardo’s Vitruvius man is the 5-pointer star. Mars at the top for Aries, then go left down to Mercury, then Jupiter, then Venus and last Saturn, which is the same as days of the week which is Tuesday, Wednesday, Thursday, Friday and Saturday. Of course the year starts at zero degree Aries.

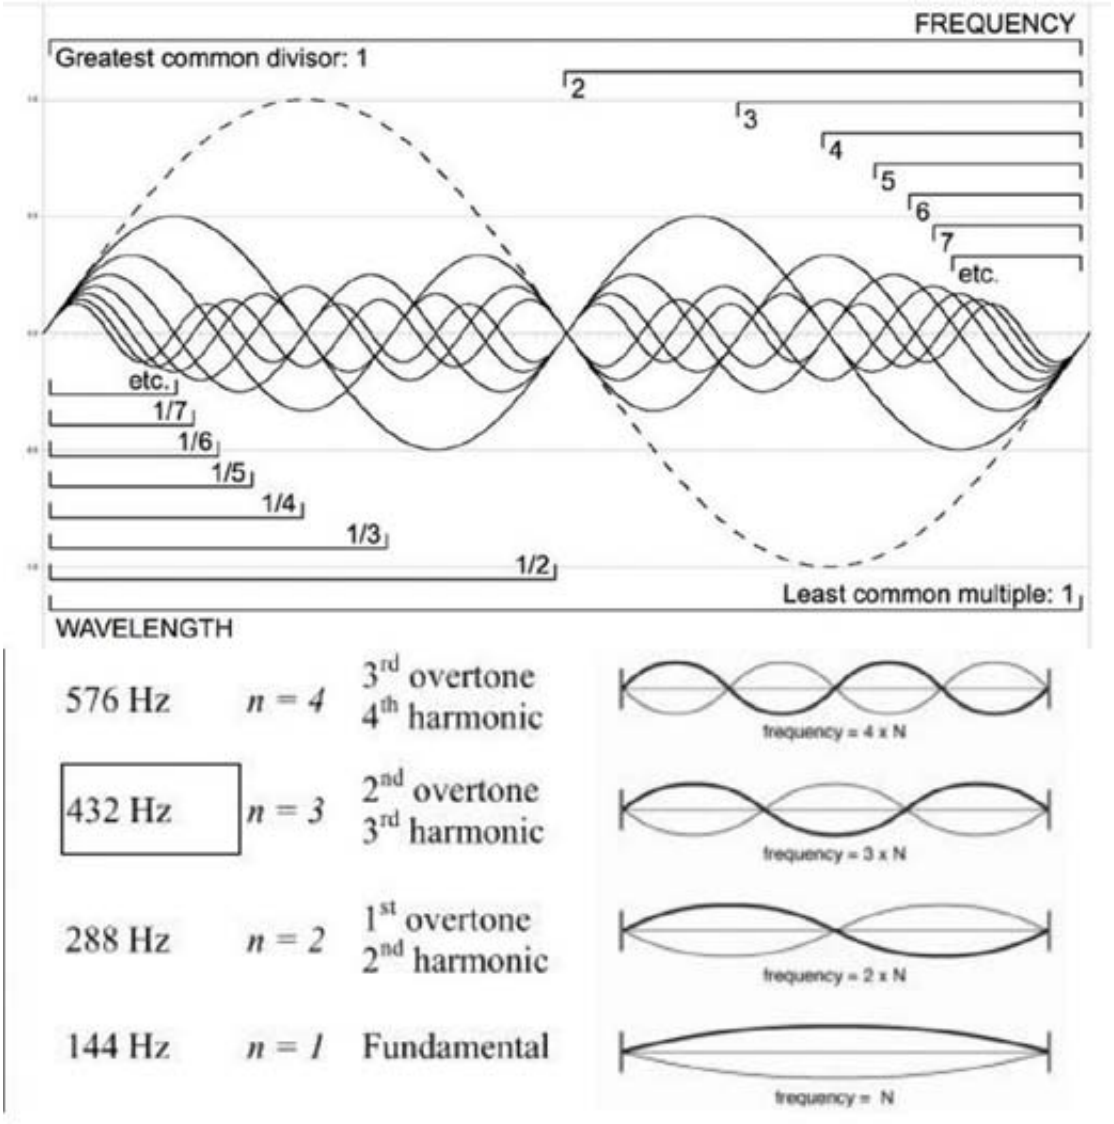

Gann was born 6th June 1878, Robert Gordon was born 9th June 1906 and Marie Stanton was born 6th October 1908. RG is born 28 years after Gann and Marie 30 years after Gann (4 x 7). The book is written 49 years after Gann’s birth (7 x 7 = 49). Gann died 49 years after RG was born in 1955. 1940 when converted to letters there is 49. Predicting his own death? 1940, also means look at 1 x 9 x 40 which is 360. 1940 +360 is 2300 days or years in the bible. 16 x 144 = 2304. 1940 days back from the last date in the book which is 30th August 1932, an eclipse you get 9th may 1927 (the day the book was written), 15th January 1922, 23rd September 1916, 2nd June 1911 and 8th February 1906 which is very important date and you should be able to work out why. The days between Gann and Marie is 11,079 days and 850 days between RG and Marie birthdates. The second and third count gives 6th June 1969 (Gann’s birthday) and 6th October 1999 (Maries birthday), both Gann and Marie are 91 years old. Go to page 91 of the book. A letter dated 1st February 1927 where Walter Kennelworth had bought cotton at 13.70, 13 x 70 = 910. From this date add 216 days is close to the top date in cotton on 8th September 1927 .The 1st February is related to an eclipse date, that should be easy for you to find.

91 x 3 = 273, on page 273 he writes about the double triangle, which is the 6-pointed star. The 6-pointed then starts at 273 degrees of the circle and there’s a reason for that, more research for you.

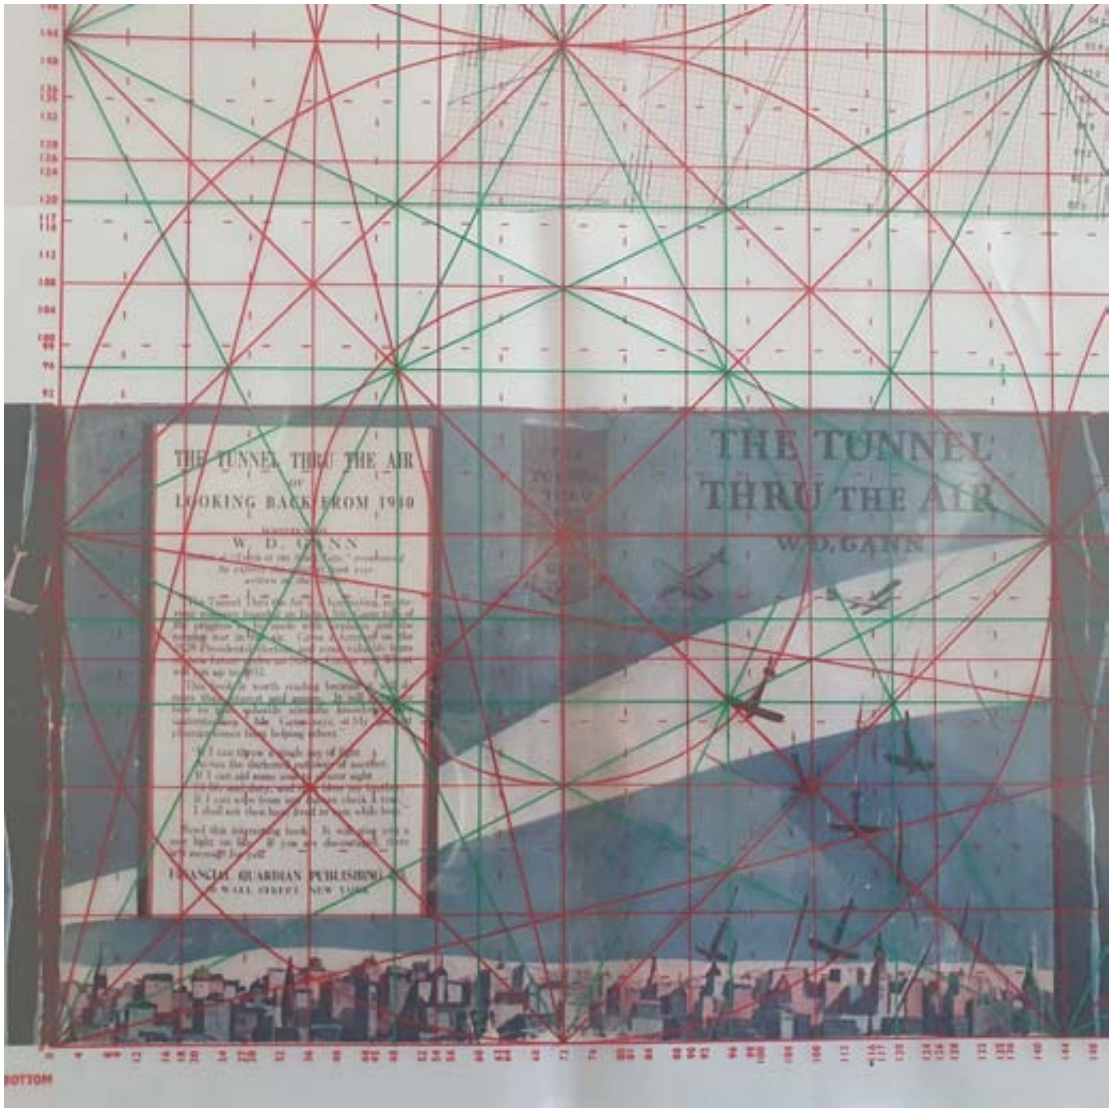

The cover has 16 planes; chapter 16 is Robert Gordon's great cotton campaign on page 195. The chapter is 16 pages. Chapter 21 (3 x 7) finishes on page 256, the square of 16, 16 is the square of 4. Captain Robert Gordon is in the book three times, last time on page 288, twice 144. Page 256 + 16 +16 = 288. On page 120, the letter Marie wrote on 5th June 1927 at 3 AM was 144 minutes before sunrise; this is the date she disappeared. They heard the bad news that she had disappeared on page 147 (3 x 49). 49 years after the book was written the copy rights were purchased in 1976 by Billy Jones, nothing by chance, they maybe sell it again in 2025, or some big changes.

432 is 144 x 3, this in months is the Bruckner cycle used by "Inigo Jones" in his long term weather forecasting. 432 months is 36 years (chapter's in Gann's book). The **speed of light** in a vacuum is 186,282 miles per second; this is extremely close to 432 squared. Music sounds better in 432 HZ. All Gann numbers are in music, 144, 288, 432 and 576 (the square of 24).
The square of the Sun is 1296 (36 x 36). 144 x 1296 = 186,624. 144 x 9 = 1296. The cover of 90 high and 144 wide is 12,960 (90 x 144). 144 x 144 is 20,736 Gann›s great cycle of 56.77 years. The square root of 12,960 is 113.84, half is 56.92

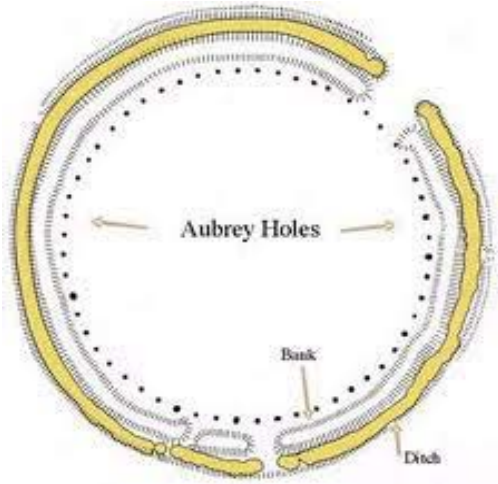

Getting back to the average, which were also coded way back in 1927. Jupiter/Saturn average on the day RG bought cotton on 24th January was 288 (2 x 144) or 18 degrees Capricorn. Walter Kennelworth bought cotton on the 1st February 1927 when the average was 289, the square of 17. Add 1 – 17 = 153, the fishes in the bible. 17 is half the number of 34 which is the chapter missing in the book and instead they added chapter 39 when there's only 36 chapters. Chapter 39 (really 34, 3 + 4 = 7) is on page 392 (8 x 49). This is Robert Gordon's seven days, 7 days is in this chapter 10 times in the 10 pages, 7 x 10 is the 70year cycle. When cotton was sold at the peak on 8th September 1927, Mercury and Venus were at 18 degrees Virgo making a perfect triangle of 120 degrees to 288. RG bought when Mars was at 24 degrees Gemini, which was exactly on the low of 6th October 1908 Pluto and Marie's birthday. The cotton exchange chart of 10th September has Sun at 17 degree Virgo and Pluto at 18 degrees Taurus making a grand trine to 288. The average of 5 planets was at 266 when he bought cotton. He says on page 82 those who understand 266 reveals some events. 266 is twice 133 (7 x 19, moon/sun cycle). 266 x 5 is 1330, close to the bible cycle of 1335 days or years.

When he sold cotton at the peak the North Node was at 24 degrees Gemini. The averages had move 14 degrees as well (2 x 7).

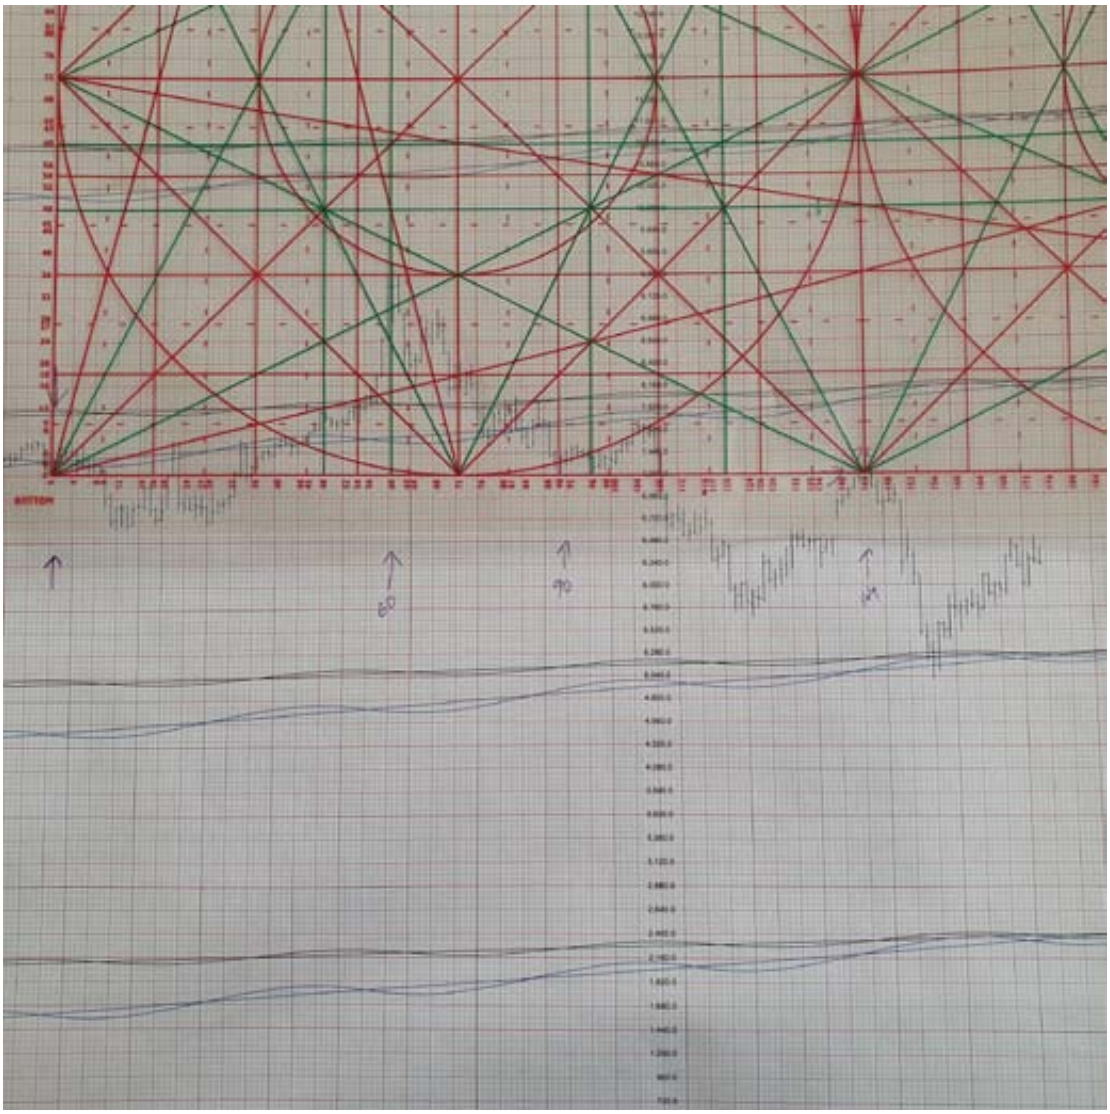

The eclipses are especially important as in Gann's TTTTA book as he wrote on page 56, 56 is 7 x 8, 1927 is part of the 84-year eclipse cycle (7 x 12 = 84) which is only out a few days. There is 56 Aubrey Holes at Stonehenge to follow eclipses. Gann's great cycle is 56.77 years (144 x 144 = 20,736 days). The same eclipse occurred in 1758,1842 and 2011. 56 years + 84 years = 140, two 70 years or 3 scores and 10 years. Of course, 84 goes 15 times in 1260, which is Time, Time and half Time.

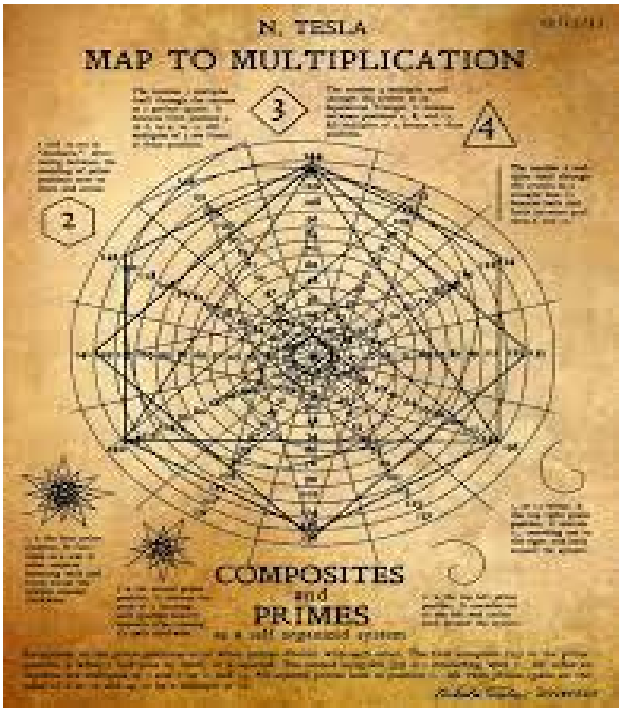

Gann's average of 8 planets is used a lot on the square of 9, Sun is "1" and the 8 planets around it. You will notice 288 and 360 are exactly opposite 144,196 and 256. When he sold all his cotton the average of 8 was at 196 the square of 14. Also you would notice 168 lines up on the square of 9 with 288, 360, which is 18 degrees Virgo. Another code for the top was 48 x 144 days added to Marie birthday, 48 is 1/3rd of 144 as well.

The 9th May 1927,14 x (2 x 7) 1940 = 17th September 2001, was Gann predicting the 911 war? Maybe its only 6 days out. There is likely to be a war starting after October 2022.

The charting program I developed for myself has planetary lines and average of planets. I assume Gann only taught everyone to count from Highs and Lows with time counts and overlays. However I have found that adding to count from highs and lows that if you count from certain astrological points its show some revealing highs and lows like the 144 count on the chart below, and the price of 72 which is half of 144. Natural square counts work way better from certain astrological points as well. Gann did say once you have the correct start you will end with the correct finish. Gann certainly didn't talk about any of these things as he always said **"I not revealing my secrets for any price!!"**

Most people do not realise Gann was on the same research path as Tesla, when he says you must look at the world in a view of energy and vibrations. Tesla also had a chart of 144, the same as Gann's wheel of 24.

Most people just look at Gann for making money, but there is more to it than that. Making money is not that hard just save more than you earn Sell high, buy low, save and have no debt. Once you have money, there must be more in life than money, Gann said "Money is only a means to an end". There's a reason Gann didn't sell his secrets, as very few people would put in the study. His books are coded for a reason and that is to screen out the weak researches. Gann is about understanding how and why things work, hence his lottery and horse racing interest as well.

One of the last things he wrote was on 6th November 1954

"Remember that you have signed an agreement not to reveal these rules and instructions to anyone, and by keeping these a secret discoveries confidential for your own use, you will later receive the very important C.E AVERAGE, and the M.O.F FORMULA, which is only taught to student's that have taken the same course as you and we do not reveal it to students who take the minor course and pay less money".

Whether anyone received this I don't know and it was only 7 months before he died. There is certainly not any notes floating around on it. As you can see what I have written is just a small amount of the coding of the book. I have still kept some codes up my sleeve for my personal use. You can't start here what I have written, you have to start and learn all from his books first, then his geometry of markets etc. This information is about 20 years down the track.
There are many scammers teaching Gann, and most are under 40 years of age and have been studying markets for less than 20 years. If they say they have the secrets to Gann, they are lying; no one knows exactly what he was doing. No one has repeated his lottery or horse racing systems yet.

2 Essential Steps for Becoming Profitable in Trading the Futures Markets

By Steve Wheeler

Founder and CEO of NaviTrader.com (www.navitrader.com)

Professional Trader and System Designer/Developer

www.navitrader.com

Introduction

Let me start by introducing myself. I am a full time trader, trainer and software developer in the futures markets. I run a real time Live Market Trading/Training Room two hours each trading day. I have traded for over 20 years, and concentrate primarily on the currency (FOREX), crude oil, gold, and stock index futures markets, such as the S & P E-mini. In a previous career, I was a practicing C.P.A. in the state of Florida.

I have developed a full suite of charts and indicators known as the Trendicators™ and a market analyzer known as the TradeFinder™, as well as a number of automated trading systems and automated buy, sell and trade management systems.

What follows are the fundamental elements you need to be consistently profitable in the futures markets. I have also included information below that is crucial to your overall success and in managing your risk.

Preparation for trading profitably consists of market observation over a period of time so that the trader can build confidence in knowing what usually happens in the market and how to profit from the recurring market behavior that repeats itself every day. To take advantage of cycles in the markets, observe the typical move that a market moves after it moves up or down out of a range contraction pattern.

The real objective is to build knowledge of probabilities of market behavior so as to take consistent profits out of specific trading instruments. The following are observations of market behavior that will help to put the probabilities in your favor.

———————————————

Step 1: Put the Probabilities in Your Favor

To put the probabilities in your favor, you must have an objective method or system for your trading. Patterns repeat themselves over and over in all markets, so knowing these patterns can help to put the probabilities in your favor. The more you can automate your trading signals, the

more objective you will be in your trade selection.

You need to determine a set of technical conditions for which you would take a long or short position in any market. You can use technical indicators that are widely available, or you can develop your own indicators. Once you have chosen the indicators you want to use, test them for validity in your trading. As in any testing, the more data, the more reliable the results will be.

Step 2: Balance Risk vs. Reward Properly

A primary downfall of beginning traders lies in not knowing how to manage risk. The use of protective stop losses (known as stops); is one important tool in trading futures. An even more important tool is known as position sizing. Position sizing answers the question of how many contracts you should trade in the futures markets, and how many shares you should buy or short in the stock market

.

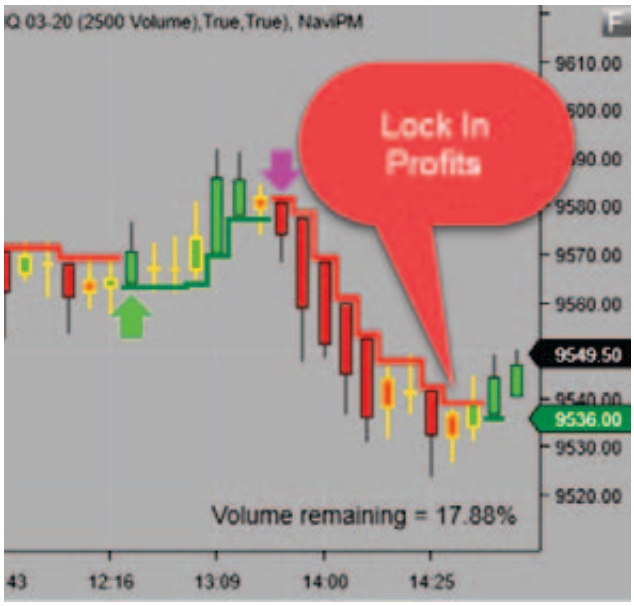

We know that trading is all about how to react to your successes as well as trades that don't go your way. No discussion of trading would be complete without a discussion of risk management.

For futures trading, risk management is established with a combination of the use of stop orders combined with position sizing. You need to pair a proven strategy along with risk management. A part of your risk management is in locking in profits and letting your winners run.

Another important benefit of properly managing your risk is how it will help you to manage your stress and fear of trading. When you have too much risk at stack, you will heighten your stress levels and fears while trading. The outcome is usually not a good one because the stress and fear causes you to not trade well as well as make emotional decisions.

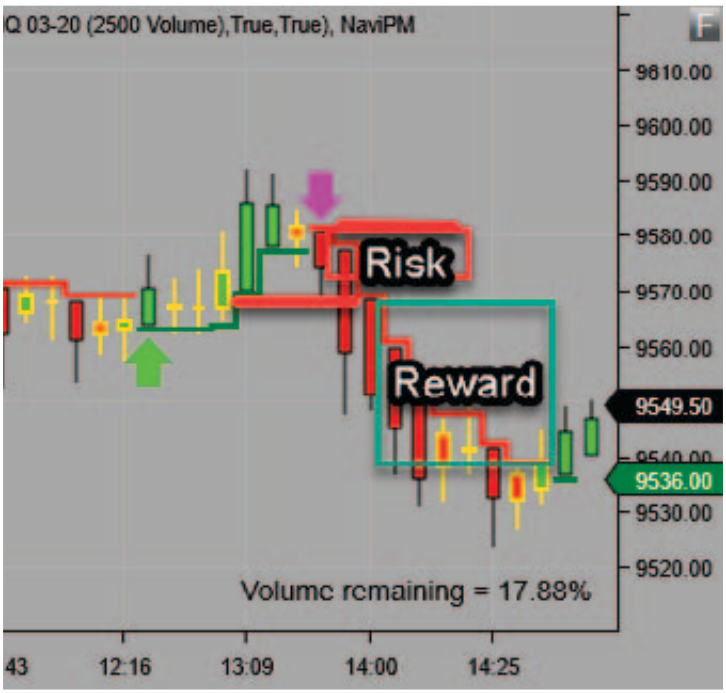

You must learn to manage stress and fear to improve your trading. Take a look at the following ways that you can accomplish reducing your trading fears and stress.

Below you will see a NaviTrader chart with our automated trailing stop indicator (red line on a short trade and a green line on a long trade) that allows you to automate your stop management and to lock in profits.

Design your trades to let your winners run and to seek a ratio of risk to reward ratio of at least 1.0 to 1.5

Below is a chart of a trade with the Risk outlined in red and the Reward outlined in green.

Risk Management Guidelines- Crucial To Your Success

The following are risk management guidelines for the micro futures contracts such as the MES Micro futures contacts. Adapt these guidelines to fit your trading plan, but do heed the importance of placing daily limits on yourself in terms of loss limits. Always trade with stops in place and be sure that you properly size your positions before you enter any trade. Also avoid trading just prior to or just after major economic news events that will impact your positions,

such as Fed announcements, jobs reports, etc. These guidelines represent a conservative approach, because your main objective should be the preservation of capital, before generating profits.

One of the biggest roadblocks to trading success is risk management and properly weighing risk and reward. If you find that you are not able to achieve these objectives, you must adapt your trading plan so that you can meet these guidelines.

How the Micro Futures Could be a Game-changer for Your Trading

If you are new to Futures trading, would just like to build on your strategy without taking on greater risk, have a smaller trading account or would just like to reduce your trading anxiety, take a look at trading the Micro Futures. Many traders find they suffer from "Trading Hesitation" because of fear of losses. The Micro E-mini suite of stock index futures may be able to help you with your trading fears.

The Micros are smaller contracts sizes and therefore provide less risk per trade contract. The Micros are one-tenth the size of the traditional Futures trading contracts. Take a look below at the differences:

Regular Futures	**S&P 500 ES**	**Nasdaq NQ**	**Russell TF**	**Dow YM**
Point Size	$50 per point	$20 per point	$50 per point	$5 per point
Micro Futures	**MES**	**MNQ**	**M2K**	**MYM**
Point Size	$5 per point	$2 per point	$5 per point	$0.50 per point

While the size and cost of the Micro Futures allow traders with low risk tolerance to more comfortably participate in futures, it is still wise to become educated on trading them as well as on the risk involved.

Using the Micro Futures Accounts such as MES, MNQ, MYM, and M2K to help you balance risk and reward

The micro futures have the benefit of lower risk and you will likely find them easier to trade. Below are some helpful guides for consideration to help you manage your risk.

Suggested guidelines for position sizing and loss limits:
For Each $1,000 of available margin:
Maximum position size of 1 contract
Maximum Daily Loss Limit of $25
Weekly Loss Limit of $50

Risk/Reward Guides for the E-mini (ES), YM, RTY, or NQ Trades

When trading the regular futures contracts, the stakes are higher, so you must carefully balance your risk and reward. Below are some helpful guides for consideration to help you manage your risk when trading the regular futures contracts.

Suggested guidelines for position sizing and loss limits:

For Each $10,000 of available margin:
Maximum position size of 1 contract
Maximum Daily Loss Limit of $200
Weekly Loss Limit of $300
Example For $50,000 Account
Maximum position size of 5 contracts
Maximum Daily Loss Limit of $1,000
Maximum Weekly Loss Limit of $1,500
Below is a recording that you can watch to see how to use Risk Management processes with the Micro Futures:

Link to access the video: https://attendee.gotowebinar.com/recording/4852146313599935235
Click on the above chart/link to watch the trade managed. If your computer has difficulty accessing the video, send an email to support@navitrader.com and we will forward the link to you in an email.

Platform

As you develop your trading skills, I suggest that you use a professional trading platform that will allow you to trade directly from the charts and will allow you to trade in simulation mode as well as to execute trades in your live futures account. As with any skill, the more that you

practice, the better you get at it. It is important to develop your skills regarding the proper use of your trading platform while in simulation mode to minimize trading errors after you are trading your actual trading account.
Trading in simulation mode will help you to develop your confidence and an overall methodology that fits your personality.

Developing a Belief in Your Approach and Overcoming Fear

Most traders will develop fear as they trade due to a history of losses. Like any fear, the way to overcome it is to face fear head on, and continue to do what you fear the most. An advantage of having a trading platform that provides for simulation is that you will be able to trade in simulation mode, as in our example above to build a plan with a positive expectancy and thereby develop greater confidence in your approach to trading. As you trade in simulation mode, develop a set of notes that will act as the beginning of your trading plan. Trade in simulation mode until you have mastered the use of the trading platform you have chosen. As you trade in simulation mode, practice developing the discipline needed to execute your trading plan. Through repetition, you will begin to develop into a polished and profitable trader.

Please let us know if you need any help in developing your approach to profitable trading. Send an email to support@navitrader.com to attend our LIVE MARKET ROOM Sessions for FREE! GO TO: https://www.navitrader.com/FreeVideos/FreeSessions.html to get **FREE TRADER SESSIONS and FREE TRADER VIDEOS**

The information within this article as well as all charts shown are for educational purposes only and not a recommendation to buy or sell any futures contract. RISK WARNINGS: Trading stocks, options, futures and foreign exchange carries a high level of risk, and may not be suitable for all investors. Before deciding to trade, you should carefully consider your monetary objectives, level of experience, and risk tolerance. The possibility exists that you could sustain a loss of some or all of your deposited funds and therefore you should not speculate with capital that you cannot afford to lose. You should be aware of all the risks associated with trading and seek advice from an independent advisor if you have any doubts. *HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS, SOME OF WHICH ARE DESCRIBED BELOW. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN. IN FACT, THERE ARE FREQUENTLY SHARP DIFFERENCES BETWEEN HYPOTHETICAL PERFORMANCE RESULTS AND THE ACTUAL RESULTS SUBSEQUENTLY ACHIEVED BY ANY PARTICULAR TRADING PROGRAM. Past returns are not indicative of future results. NaviTrader, Inc. and NaviTrader.com provide programs and services that are for educational purposes and not intended to be a recommendation to buy or sell any futures, foreign exchange, stocks, ETFs and/or options market trades. Past performance does not guarantee or imply any future success.

How To Become A Bulletproof Trader

By Steve Ward

“I Want To Bulletproof Myself”

“I want to be able to deal with my trading performance and results with greater equanimity. I want to be prepared for an extended run of bad performance. I want to bulletproof myself.”

This was the request I had from a renowned and highly successful hedge fund manager who engaged me for a coaching assignment.

“How would you know if you were bulletproof?”, I asked.

“I would have less negative thoughts; I can get obsessed about decisions I have made, especially when I have lost money, or I am not making money. I can be a bit perfectionistic. And I don’t like failure. The thoughts keep repeating themselves and I know that my mindset is not helpful. Sometimes I am just sat there thinking ‘what a f****** idiot’, over and over again. My emotions can be very negative, sometimes I feel pretty depressed. When I’m like that I actually feel physically sick in my stomach.”

The Gap - Actual Returns Versus Potential Returns

The trading environment is challenging - making decisions and taking risk under conditions of uncertainty and uncontrollability, and navigating the highs and lows of winning and losing, is not easy. In their efforts to navigate it, many traders engage in trading behaviour that actually reduce their market returns – cutting winners short, holding onto losses, hesitating, not pulling the trigger, overtrading, trading too big or too small for example. This behaviour creates a gap between a trader’s actual returns and their potential returns.

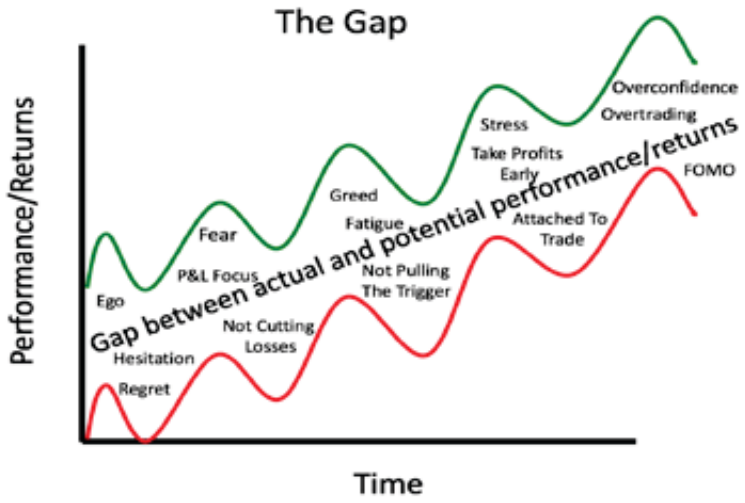

Diagram : The Gap Between Actual Returns and Potential Returns

What is the gap between your actual returns and your potential returns?

Closing The Gap – Becoming Bulletproof

You cannot take out the challenges and demands of trading the markets, they are inherent to the nature of the activity. It is common for traders to experience stresses, difficult thoughts, unwanted emotions and uncomfortable sensations at times in their trading. The goal is to get good at dealing with them, to develop ways of thinking, feeling and doing that reduce the gap between your actual returns and your potential returns, to become 'bulletproof'.

In this article I am going to provide some tips and strategies that can help you to become more bulletproof as a trader, broken down into three core themes;

- Process (craft) – the specific behaviours that increase your chances of success
- Psychology (mind) – your mental framework and mental skills
- Physiology (body) – managing the impact of stress and fatigue

Diagram : Bulletproof Trading Framework

Process

Process + Luck = Outcome

Trading is an activity where the outcome of your trade is a result of your process - your trading skill -and luck, and this has strong implications for how you should approach your trading, specifically by having a focus on process.

I have consistently found in my coaching work that helping traders to become more focused on their trading process, developing it, and focusing on making good trading decisions has led to reduced feelings of stress and anxiety, reduced emotional intensity, greater focus and flexibility, improved execution, and subsequently improved results.

Here are three ways to increase your own process focus.

1. Make a decision to become more process focused as a part of your mental framework. Focus on making good trading decisions.
2. When evaluating your trading decisions don't just focus on 'What' the outcome was, but focus much more on 'How' you made the decision, the actions you took, how you were thinking and feeling, and what the market context was.
3. A checklist can be a helpful way to keep your trading process in mind - a reminder of actions to take/questions to ask at specific stages of the trade cycle.

Psychology

There are many aspects to the development of a strong trading psychology, and I have chosen to focus on two here – mental framework and mental skills.

Your mental framework is essentially your mindset, how you think about yourself, trading, markets, risk, uncertainty, winning and losing etc. Your mental framework, which has developed through your life and your learning history (in and out of markets) acts as a filter to how you experience the world, and the markets, influencing how you feel, behave and therefore trade. A proprietary trading client I worked with recently said to me that he saw the markets as 'a constant stream of opportunity', a bank trader told me how he 'saw the markets as a puzzle', a hedge fund trader facing a difficult time in his trading saw this as 'an opportunity to adapt'. These are all insights into their mental frameworks. Alongside the goal of developing your trading process, should sit the process of building your mental framework, developing helpful thoughts, beliefs and narratives about yourself, trading and markets.

Mental skills are the practices you can train and deploy as required to manage yourself in the markets. Here are four that I believe are extremely valuable.

Committed Action
The process of being willing to take action, to execute your trading strategy in the presence of uncomfortable or difficult thoughts, feelings or sensations – discipline. Strengthen this commitment by being clear about your purpose; focusing on and building trust in your process; developing your confidence in being able to manage discomfort and difficulty.

Mindful Awareness
Having an in the moment awareness of your thoughts, feelings and sensations which is key to being able to regulate them. With my own clients I use mindfulness-type strategies to build their present moment awareness, and to develop their 'observer self'.

Cognitive Distancing

In difficult times, difficult thoughts can show up; 'I need this trade to win', 'The market will come back', 'I can't afford another loss'. Cognitive distancing is a process of noticing the thought, without getting entangled in it, of creating a space between thought and action, that enables you to become less reactive, and more responsive. 'I need this trade to win' becomes 'I am having the thought that … I need this trade to win'.

Emotional Acceptance

Attempts to avoid feeling uncomfortable emotions often lead to trading behaviours that reduce market returns. The alternative is to accept and work with your emotions. To be *aware* of them, *acknowledge* them, and *assess* why they may be showing up, and then take any *action* that is helpful. Seeing emotions as 'data' has been a useful reframe for many of my own clients.

Physiology

A trader's physiological state impacts their risk taking and decision making.

John Coates, an ex-Wall Street trader, now a researcher at Cambridge University in the UK, has been studying the relationship between a traders physiology and their risk taking and decision making for many years with his findings showing that their biology changes in response to winning and losing, altering their hormonal balance, shifting their risk preferences and influencing their decision making.

Traders are also prone to the impact of fatigue. Your brain is approximately 2% of your body weight and 20-25% of your energy consumption. Fatigue reduces mental resources, and leads to tendencies of risk aversion, a bias towards making quick and easy decisions (being more bias prone), as well as an increased risk of error.

I have spent a lot of time over the last few years working with my trading clients on developing their physiological fitness, a process of developing stress and fatigue resistance, via a process of both measuring and assessing their physiological state with biofeedback devices, and helping them to develop behavioural practices that both manage and maintain their state, and train and strengthen it.

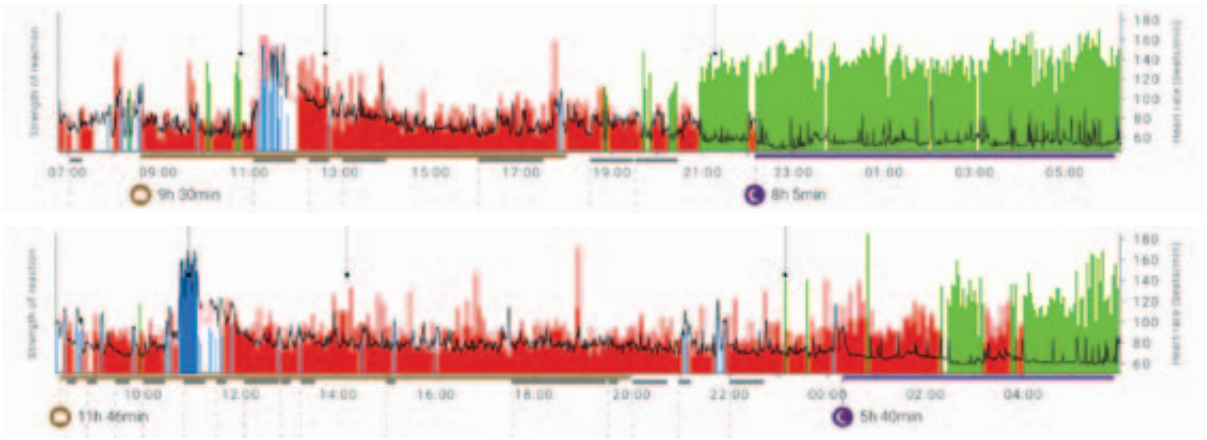

Diagram : Charts showing two different traders physiological states – red bars are stress, green bars are recovery, blue bars are physical activity. The higher the bar the stronger the response. The length of the working day and sleep period are shown alongside the icons.

Measuring and monitoring your physiological state could be done simply and subjectively by noting your levels of stress and energy on a 1-10 scale, perhaps when waking, and pre-trading, and even periodically during the trading session. One trading client I worked with used his 'stress v energy spread' as a core practice for monitoring and then managing his state. A more objective, and relatively accessible method, might be to utilise wearable technology, or to utilise apps that allow you to take a daily physiological reading (such as EliteHRV).

In terms of managing and strengthening your state, developing physiological fitness and resilience the core areas to consider are;

- Sleep – getting sufficient quantity and quality
- Recovery – building recovery into the day/trading session
- Physical Activity – moving, exercising regularly
- Nutrition – providing sufficient fuel to the system
- Meditation – as a way to train specific mental states
- Breathwork – as a way to regulate and train specific physiological states

Becoming A Bulletproof Trader

Imagine for a moment a future trading you even more capable of handling the challenges and demands that you face in trading the markets than you currently are.

Think about your process, your psychology and your physiology.

What is working that you can continue to do?

What could you start doing, or do more of?

What could you stop doing, or do less of?

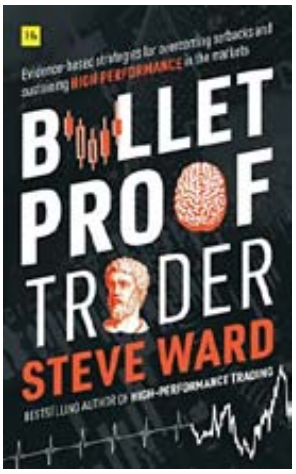

Steve Ward Bio

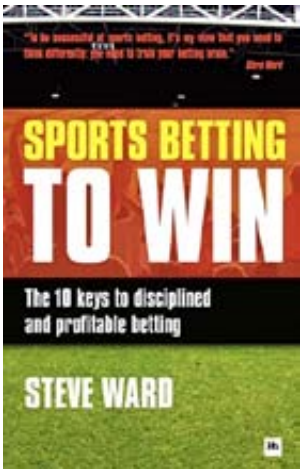

Steve Ward specialises in helping people working in trading, investing and banking to enhance their risk taking, improve their decision making and to achieve and sustain high performance by utilising the latest science, research and practice from performance psychology, behavioural science, neuroscience, physiology and philosophy.

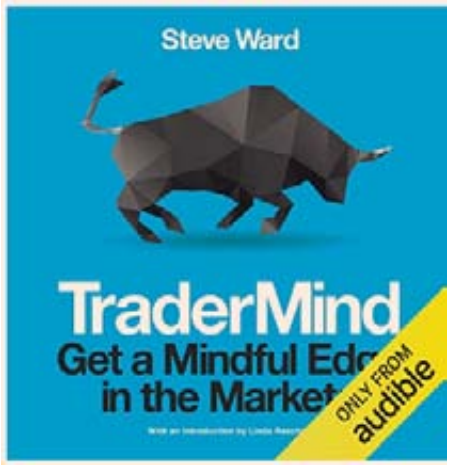

Since 2005 he has provided specialised coaching, training and consultancy services to investment banks, hedge funds, asset managers, commodities trading houses, utility companies and proprietary trading groups across the globe.

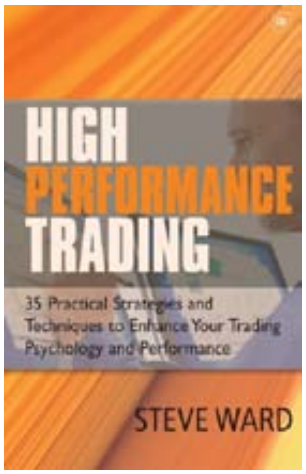

Prior to starting his work with within the financial sector Steve provided sports psychology coaching to elite athletes and teams in over thirty different sports across the globe, with a particular interest in extreme, action and adventure sports; and he has also provided psychological coaching for professional poker players.

He is the author of 'Bulletproof Trader', 'Tradermind', 'High Performance Trading', and 'Sports Betting To Win', has co-managed a team of 50 proprietary traders, and traded FX and Stock Indici

Bulletproof Trader' Sports Betting To Win Tradermind' High Performance Trading

Steve is launching an online trading psychology course offering private/retail traders a rare opportunity to work with him, access his extensive experience and expertise, and gain insights from his work with his institutional clients so that they can develop the mindset and mental skills required to succeed in the markets. Keeping a Disciplined Mind When the Pressure is On to Make Up for Losses

by Rande Howell

Click to view video

"Taking that first loss isn't so bad. I know the platitude: losing is simply a cost of doing business in trading. It's the second and the third loss that do me in though. Something happens then that defies reason. The pressure is on and I don't want to lose. An urgency swells up in me and I am compelled to get back to break even. And, in the heat of the moment, it IS the thing to do. But when the smoke clears, there is an even bigger hole in my trading account. If I could solve this one problem everything would change."

Emotional Discipline Meets Primitive Survival Instincts

Like this trader, you know in theory that successful trading is about taking one trade at a time - then letting go of the results of each trade before moving to the next trade, so that the emotions of winning or losing do not contaminate the mind that engages the next trade. And the trader quoted above can do that up to a point. He can take one loss and be fine (maybe two). But something happens at some point that erodes his disciplined mind and replaces it with a mind rooted in desperation, fear, and/or anger. Suddenly, like a flash flood, his mind is possessed to make up for prior losses out of a fear of losing or anger that the markets have taken your capital…and you're possessed to get it back.

It is right here that theory and practice separate. Intellectual knowledge of trading (talking the talk) falls apart when challenged by loss, and continued loss (walking the walk). Traders try to out-think primitive emotional responses to challenging moments, not understanding what they are walking into. In the case of trying to make up for prior losses that often leads to revenge trading, the trader is triggering primitive survival instincts of the emotional brain that overwhelm the thinking brain. The deception is believing that the Thinking Brain (neo-cortex) is separate from the Emotional Brain (limbic system).

Actually, the Thinking Brain and the Emotional Brain work hand in hand to produce the mind that engages the uncertainty and challenges of trading situations. And, as stress builds, the Emotional Brain has a much greater say-so in the way you respond to danger (i.e. fear of loss and the felt need to make up for losses – aka claw-back bias) than does the Thinking Brain. It only appears that emotion and reason can be separated. The more challenging the situation (taking multiple losses), the greater influence the Emotional Brain has over the Thinking Brain. Reasoning (the capacity to be objective) is compelled to rationalize what the Emotional Brain believes as the stress is ratcheted up. What started out as a trickle (where reason seemed to be in control) becomes an all-consuming flood – where the Emotional Brain has hijacked the Thinking Brain's capacity to reason as the perceived danger looms.

This is not an individual's psychological problem. Rather, it is your evolutionary psychology. This is how your Emotional Brain learned to survive in the really dangerous times of our Caveman ancestors. Limbic learning moved from learning that was successful for surviving in a dangerous world to genetic transmission of a state trait into future generations. Those are the subconscious biases that drive the mind you brought to trading…good for short term survival but bad for probability management. Think of it in these terms from your evolutionary psychology - something (the markets) has

caused you pain (a threat to life) and you are going to fight back. You are not going to take it. Something has been taken from you and you are going to get it back. In the dangerous world of our Caveman ancestors, the pain of a loss meant a threat to biological life. And it required an immediate and powerful response for survival's sake. This is the origin of your survival instincts rooted in the Emotional Brain. It is also what is going on below conscious thought threshold in the brain, engaged in taking several losses in a row.

Now, as you experience a loss or a series of losses in your trading and watch your P&L take a nosedive, you are experiencing the urgency of your survival instincts. (Remember that the limbic learning that was successful got wired into your genetics.) From the Emotional Brain's perspective, you have to fight back against something that is hurting you. The problem is that the hurt now is psychological discomfort. But then (and in the limbic system), it is a threat to your very existence. Nobody told the Thinking Brain about this. The message simply got routed directly to the fight/flight response of the amygdala in the Emotional Brain. Based on the level of perceived danger and the limbic beliefs about your capacity to manage the uncertainty produced by the loss, the message never got to the Thinking Brain where your capacity to reason resides. You are now acting from survival instinct, which has taken over thinking. Thinking is now just fabricating a story to support what the Emotional Brain has already decided.

Building a New Partnership Between the Thinking Brain and the Emotional Brain

Trying harder is not going to work. Magically thinking that the problem will go away won't work either. Denial only makes the problem worse. The solution first starts with understanding the problem with new eyes. This is what I have presented in this article so far. Now, how do you solve the problem of losing your discipline after a loss or several losses? (BTW – winning several in a row creates a similar problem but in the opposite direction.)

It's all about Emotional Intelligence and how to better manage the emotions that give rise to the mind you bring to the engagement of uncertainty. Emotions are not optional and it is impossible to leave them at the door when you trade. That is denial. They are always there, acting in partnership with thinking. You cannot control emotions by brute force, willpower, or by pretending they are not there. But you can manage them and, as you grow in Emotional Intelligence, you can control what emotions trigger when you engage uncertainty. This is what I call Emotional Mastery. You are not conquering your emotional nature. Instead, you are mastering your emotional nature….especially what emotions arise when you (as a trader) encounter risk (capital) to an uncertain outcome. Survival based emotional instincts will automatically trigger (and all the problems attendant to that) if you do not develop the Emotional Intelligence to deal with the brain's distaste of uncertainty – and its corresponding confusion, vulnerability, and movement to fight/flight. Learning to do that is the process I teach that is outlined below:

Emotional Regulation. First and foremost, the emotions that trigger when you take a loss have to be regulated so that they do not escalate and become problematic. This is where breathing and muscle relaxation are learned as skills for calming down emotions. E-motions are biological in nature and push you to act in a certain direction. They take over your psychology in the process of the urgency toward action. Because they are biological, they also have a biological signature that includes a breathing style and a muscle tension style as they gather steam. By interrupting this signature through the way you breathe and relaxing tense muscles, you disrupt the arousal of the emotion before it takes over your thinking. This is the first vital step.

Mindfulness. Second, mindfulness is the capacity to step back out of your identification with your thoughts and beliefs. You come to realize that you and your thoughts and beliefs are not you. In fact, you do not have thoughts and beliefs – they have you. They represent only one potential organization of a Self – not "You". It is the historical organization of the Self that needs to be re-adjusted to suit the needs of the mind that engages uncertainty. Your Caveman brain is simply not up to the task. The Intentional Mind is the goal of Mindfulness.

Recognizing the Historical Dialogue. Have you ever noticed that there is a commentary going on in the mind all the time? It is a constant chatter with lots of opinions, judgments, criticisms, and temptations. This is the Historical Internal Dialogue. It is this ignored commentary that has to be brought into the light of your awareness and changed in order to be able to re-shape the mind for probability thinking needed for effective mind management while trading.

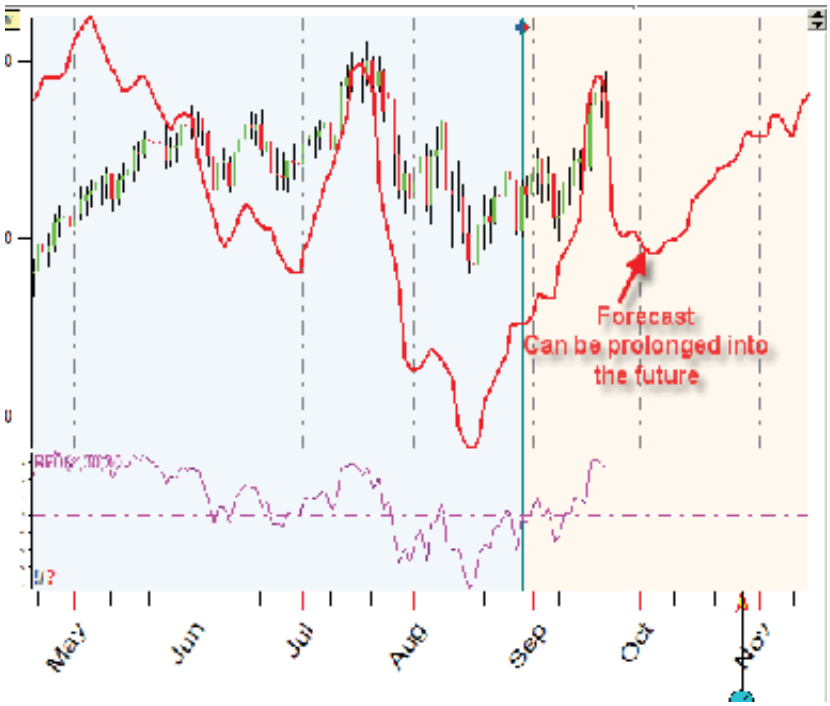

Discovering Your Empowered Nature. Just as there is fear, pride, greed, and criticisms that live in the conversations of the mind, there are also emotional programs that are conducive to a probability-based mindset. These are discipline, courage, self-soothing (self-compassion), and impartiality. These emotional programs can be trained to come forward when you engage uncertainty rather than the emotions derived from the survival instincts of your ancestral Caveman days. They are the primitive emotional beliefs that you hold about yourself that you are projecting onto the markets. These are not your beliefs. Through Limbic Learning, you fell into and fused to these beliefs through your evolutionary psychology and through your family of origin. But they represent only one potential organization of the Self. By developing these other aspects of your potential, you change the Self (the mind) you bring to the management of Uncertainty. This is the game changer.

Meeting the Challenges of Engaging Uncertainty. Struggle is simply part of the human experience, whether in trading or life. In that struggle you discover that you do not control outcome, whether you are right or wrong, and that you cannot predict with certainty the outcome of a situation. The brain, in its historical organization, does not deal with uncertainty well at all. In fact, it falls apart – as evidenced by your trading problems. But what you can control is construction of the mind that you bring to the engagement of uncertainty. This you can control with training. This is the psychological edge that so many traders miss out on. They often have a statistical edge in their trading system, but their mind cracks under pressure – and that edge never gets to manifest.

The disciplined, courageous, self-soothing, and impartial mind can be built. The beliefs behind the emotions can be examined and re-built to bring the psychological edge needed to run the statistical edge. This mind is not looking to win or lose – it is looking to perform. And by performing at peak levels while focused on performance (which you can control), the need to win and not lose (which you cannot control, which makes you feel powerless) takes a back seat. It is about performing to create the edge. In that edge is the possibility of consistent profitability. This is where the Emotional Brain and Thinking Brain are cooperating with one another, producing the peak performance mind. Uncertainty is no longer feared. Winning only means you landed on the right side of probability, relative to you. Losing only means you landed on the wrong side of probability, relative to you. Winning or losing do not become the basis of judging the Self. This is a great freedom every trader needs to acquire (not just in trading, but in life). Without the fear of losing that overwhelms the Thinking Brain, the disciplined mind becomes the new emotional habit that greets uncertainty in the moment. The emotions of uncertainty are mastered. And you are released from the grasp of your instinctual emotional survival programming. This is emotional mastery of the trading mind.

Timing Solution

Forecasts the Markets Instantly!

Timing Solution generates projection lines based on fixed cycles, astronomical cycles and other types of models.

The software considers models that deal with natural cycles, cycles that are based on celestial bodies' movement.

The program analyzes tens of thousands of different planetary lines.

The Universal Language of Events module allows you to create more advanced models analyzing everything that occurs in time and researching the effects of these phenomena on the stock market.

❄ You can ask the program to reveal the most powerful cycles for your financial instrument.

❄ Special algorithm that reveals the freshest/newly appeared/strongest cycles.

❄ The program analyses all turning points, provides their statistical analysis and displays the most probable support/resistance levels.

❄ Charting Tools, Fibonacci levels, Pitchforks, Gann Angles and many other traditional charting tools are available.

"THE COMBINED VIEWS OF THE MASTERS" 2 VOLUME SERIES

Robert Giordano

The 4 parts

Part 1, Master's Non Astro Price/time cycle applications	Book 1
Part 2, Review of Modern Technical Theory	Book 1
Part 3, Mundane/Natural Energy Applications for Time and Price Cycles	Book 2
Part 4, Individual Astro Fingerprint Applications for Time and Price Cycles	Book 2

Author's Cited
WD Gann, George Bayer, RN Elliot, Edward R Dewey,
Alen Andrews, Nikolai Kondratieff, Luther Jensen,
Professor Donald Weston, James Mars Langham
And others……!

Book 1 Applications
Master's Non Astro Price and Time Cycle Applications

General biography of each cited master trader
Monthly and weekly Gann yearly cycles
Time and price range counts
Time and price range divisions
Static cycle research
Composite cycle research
Numerical full, half and quarter square for price and time
Square of 9 angles
Pitchfork
Ellipse research
Gann angles
Square of 9 and Hexagon price and time cycles
A/B price range divisions and expansions
Squaring price and time ranges with and without Gann star
And more…….!

Review of Modern Day Technical Theory

Book 1 feature a general overview of modern day technical analysis applications along with including (in the package) a PDF of many outside of our software technical tool examples with formula.

Technical indicators featured within our Gann Grid Masters 2.0 ;

Moving average, Bollinger Bands, PSAR, Zig Zag, Volume, RSI, ATR, ADX, MACD, Stochastic, Fast Stochastic, William R, Force Donchien Channel, Chalking Money Flow, Rate of Change, Commodity Channel and Index Opening Range Breakout.

Book 2 Applications
Mundane "Natural Energy" Theory and Applications

Learn How Too:

Find dates when planets Ingress into new signs
Find dates when planets turn retrograde
Find dates when planets turn direct
Find dates when direct planet re-crosses retrograde degree
Find dates when planets aspect planet retrograde degrees
Find dates when planets aspect eclipse degrees
Find dates when planet and moon are at max north, south and "0" declination
Find dates when planets are in full hour right ascension
Find dates when planets are in parallel latitude
Find dates when planets move in user set aspects from zero Aries
Research important mundane planetary synodic cycles
Find and plot dates of New, Full and Quarter moon cycles

How to Find Any Markets Individual Astro cycles for Price and Time Theory and Applications

Learn How Too:

How to find planetary fingerprints from major high and lows price and dates
How to find number square aspects from fingerprint findings
How to back test all found major planetary fingerprint combinations
How to find all square planet aspects from itself on all tops and bottom dates
How to find all planet aspects from itself on all tops and bottom dates
How to find dates when other planets cross Hot Zodiac degree
How to research all declination deg from tops and bottom dates

How to research all RA in hours and longitude from tops and bottom dates
How to find dates when planets aspect mundane and Bayer's mirror points
How to research all "Hot" zodiac degrees from all major tops and bottom
How to research all "Hot" fingerprints in non-confirmative aspects
How to research all aspects to first trade, incorporation and natal planet by deg
How to research individual planet price conversion (price channels)
How to research combined mean planet price conversion (price channels)
How to research individual top and bottom prices converted into zodiac degrees
How to research first trade planet degrees converted to price
And more……!

"Combined Views of The Master's" Package Deal # 1…!

As all who came before will tell, market forecasting may start as a curiosity but will soon become a multiyear or even lifelong obsession. "Don't let this happen to you", you can now learn from my personal time, experience and research spanning over 25 years. The goal of this work is to save our readers countless weeks, months or even years from learning many useless technical dead ends.

Just as I had done for my private students "The Combined Views of the Master's Package" will give an intermediate through advanced theory on many of the master's true forecasting methods. The same method featured within our Gann Grid Master's 2.0 software.

Included within this package;

A full working version of our "New" Gann Grids Master's 2.0 RT Software
Two volume "Combined Views of The Master Series "
Multiple hard to find and out of print books and courses for further research
1 full year subscription to Traders World Online Magazine
Traders World Online Magazine free books offered by Larry Jacobs
And 2 full hours of free 1 on 1 live training from myself Robert Giordano the software's developer and book author.

Software and Book Package Pricing ……$1500

“Combined Views of the Masters” Package # 2
Private 1 on 1 Training…!

Offering our students the ability to learn directly from the software developer and book author himself. !

Now through the rest of 2020, I Robert Giordano am offering not only the above mentioned package, but am also taking reservations for a very unique special, “18 Full Hours of Live 1 on 1 Private Training”. The scope of the lessons will include all the intricate details, functions and features found within our one of a kind 2.0 software’s applications, along with extensive insights into my personal discoveries featured within the “Combined Views of the masters” 2 volume series.

Included within the Live Package;

A full working version of our “New” Gann Grids Master’s 2.0 RT Software
Two volume “Combined Views of The Master Series ”
Multiple hard to find and out of print books and courses for further research
1 full year subscription to Traders World Online Magazine
Traders World Online Magazine free book offers from Larry Jacobs
And 18 full hours of free 1 on 1 live training from myself, the software developer and book author, Robert Giordano

Live Training Package Pricing $3,750

For more information on packages registration or purchase please contact me direct at;

Thank You
Robert Giordano

4th Dimension Name Chart using Numbers, letters and Squares

by Robert Giordano

In several places WD Gann claimed he discovered something called the fourth dimension of market cycles. He further stated this same method of calculation could be used to forecast the timing of people, places and things, however gave very little information on its actual use. The only reference he made was on his unique 21 x 21 United States of America chart, his 20 x 20 New York Stock Exchange Chart, US Steel and an actual forecast of the Abdication of Wilhelm 2nd the by using his name chart

According to his instructions, Gann would count the letters in the name and start a square with specific angles within it. It was those angles Gann felt would highlight the fourth dimension of a person, place or thing's life cycle timing.

He also claim according to his findings every letter had a special vibration and meaning, so when we have a fourth dimension angle cross within a specific year or month in life, it would cause a ripple effect in time thus releasing the energy relating the letters and number of that period.

Using my new Gann Grid Master's 2.0 software application "Chart Square" you can easily set up any stock, commodity, person, place or thing's name square and see exactly what Gann was referring to within his dialog.

Gann Course Quotes;

United States of America 21 X 21 Yearly Chart (October 12 1492)

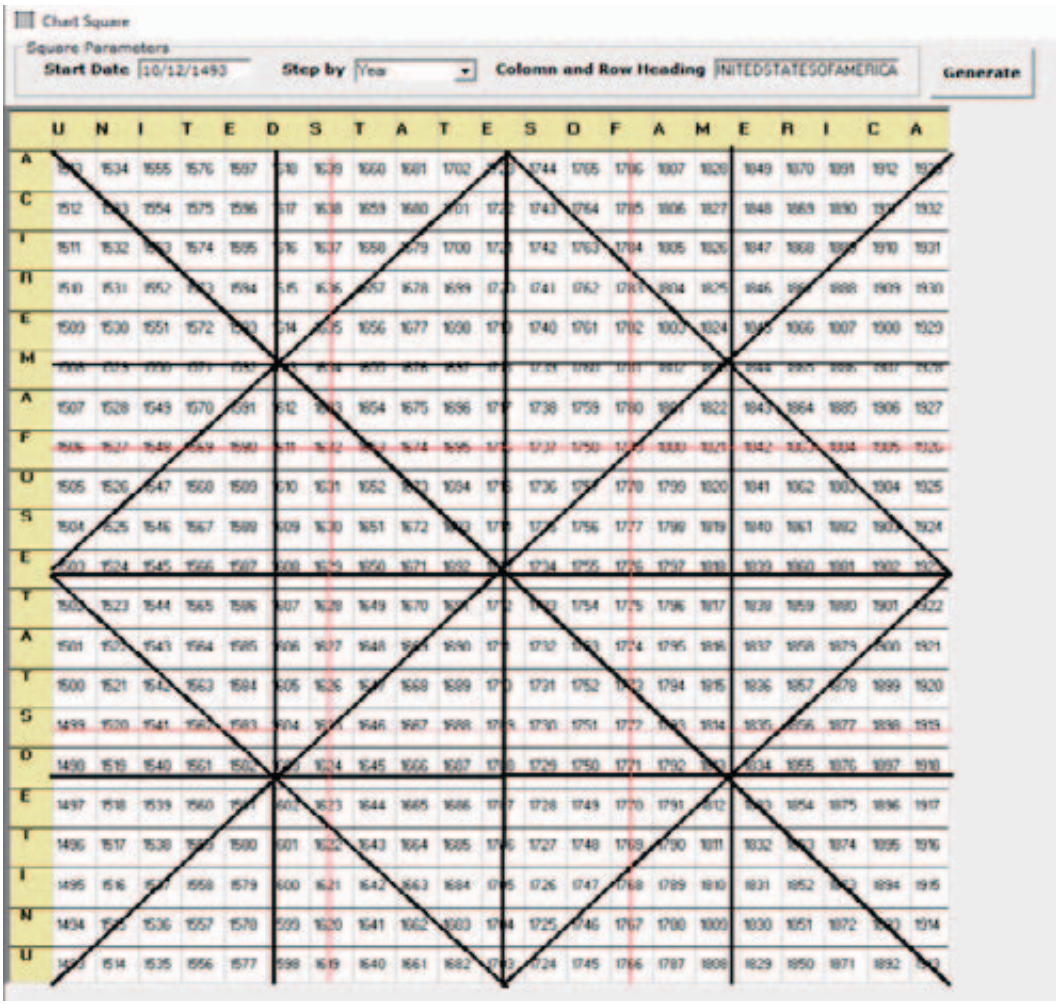

UNITED STATES PERMANENT MASTER CHART

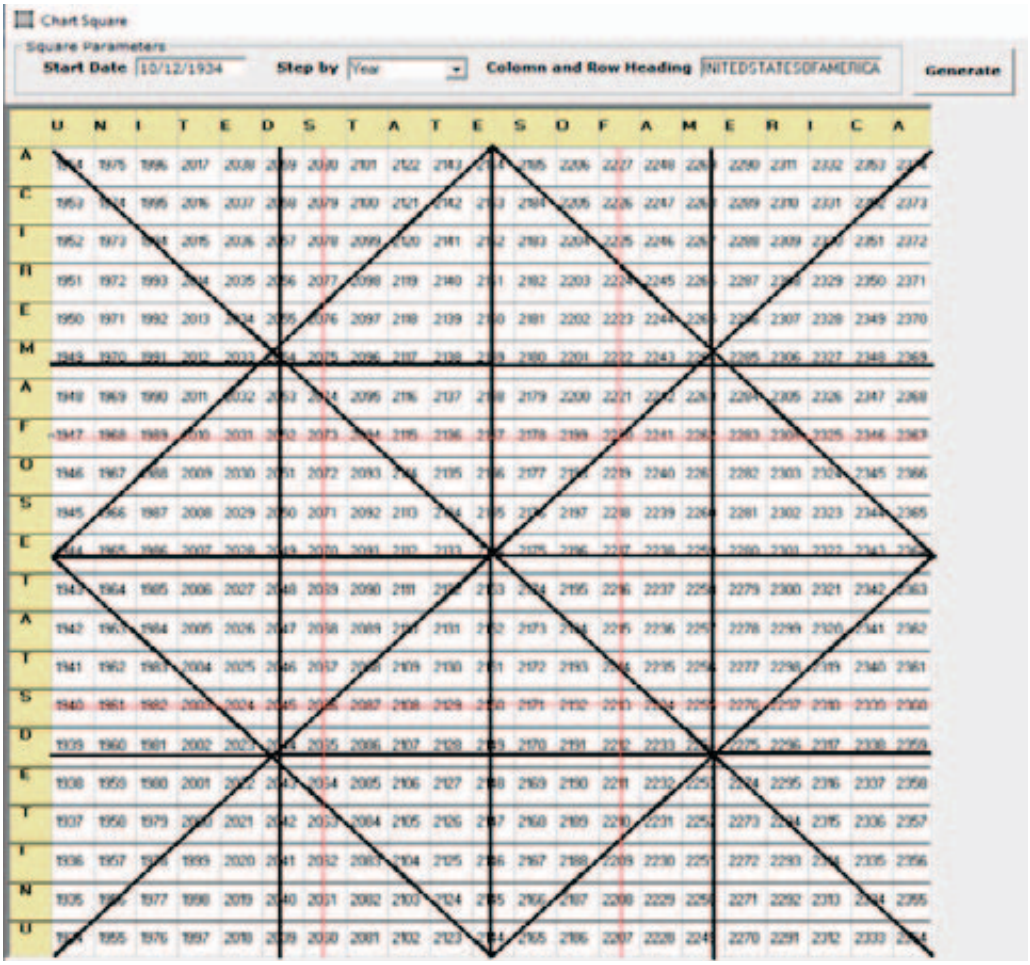

We use the square of 7 for the United States, because the name of America contains 7 letters, and this square is 49, a very important and fatal number.

We begin the United States Chart on October 12, 1492. Make up these Squares of 7 and put on the years. You will note how this indicates the panic years in the United States and the years of prosperity.

You can also make up a Square of 21 x 21, which is the number of letters in the name of United States of America. These angles and important points will all come out about the same as when we use America, because three times 7 is 21. However, you will get some stronger angles and more important points if you make up the Square of 21 x 21, which will run out to 441, with the 1/2 point at 220-1/2.

The more you study these Permanent Chart, the more you will appreciate their great value, and will see that numbers do determine everything in the future, and that geometrical angles and mathematical points measure every Resistance Level, time, price, space or volume.

NEW YORK STOCK EXCHANGE PERMANENT CHART

This Chart is a Square of 20, or 20 up and 20 over, making a total of 400, which can be used to measure days, weeks, months or years, and to determine when tops and bottoms will be made against strong angles, as indicated on this Permanent Chart.

For example: the New York Stock Exchange was incorporated May 17th, 1792. Therefore, we began at "0" on May 17, 1792. 1793 ends on a 1, when the Stock Exchange was 1 year old. 1812 will come out on 20;

1832 on 40	1892 on 100
1852 on 60	1912 on 120
1872 on 80	1932 on 140

Note that 139, or 1931, strikes the 45° angle, running from 20 down, and that this is in the 7th zone, or the 7th space over, which indicates that 1931 is the ending of a bear campaign, and

the starting of a bull market. But we must watch out for a break around May and June, 1931, when this angle is hit at the end of the 139th year.

You will notice that the numbers which divide the square into equal parts, run across 10, 30, 50, 70, 90, 110, etc., and that the year 1802 comes out on 10, the year 1822 on 30, the year 1842 on 50, the year 1862 on 70. Note that the year 1861, when the Civil War broke out, was on the number 69, which is a 45° angle. Then note that 1882 ended in May on a 90° angle, and at the 1/2 point, 180° angle, running horizontally across.

Again in 1902, it was at 110; the 1/2 point, and in 1903 and 1904, hit the 45° angle.

Note that the years 1920 and 1921 hit the 45° angle on No. 129 and 1922, the first year of the bull market, was at 130 at the 1/2 point.

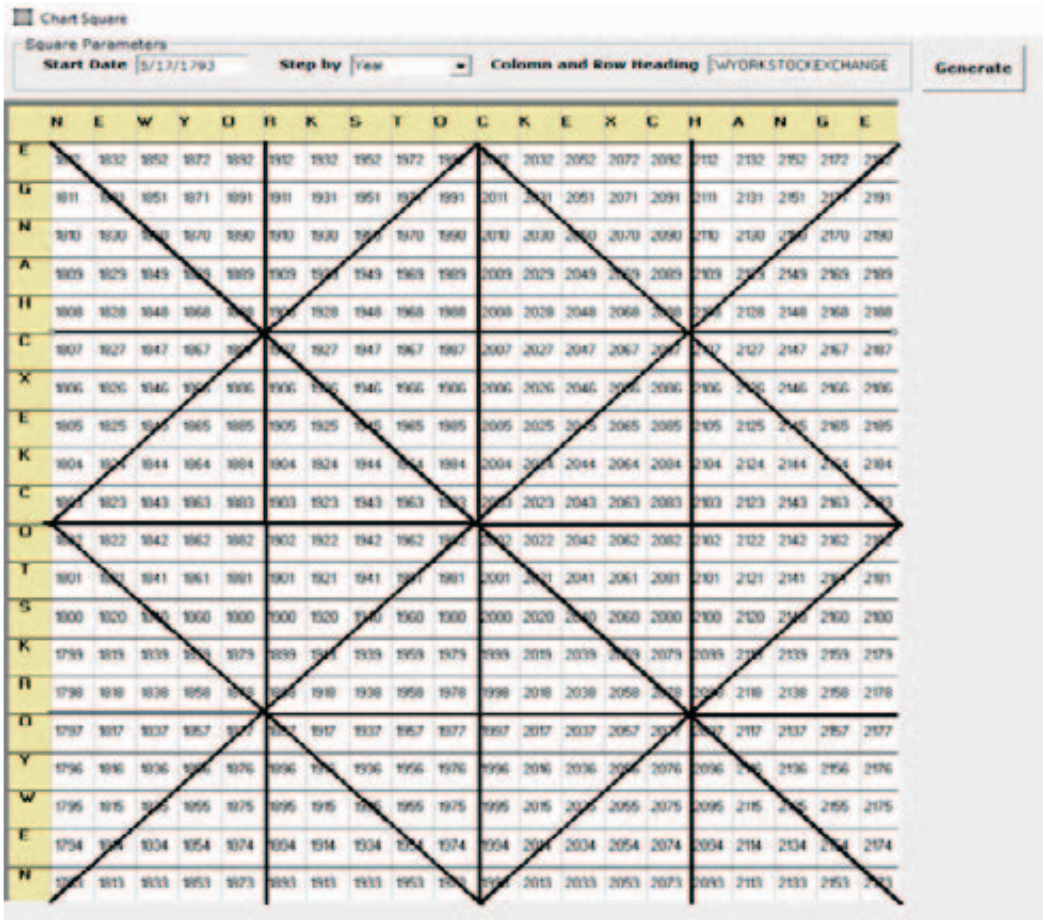

Note that 1929 was on the 137th number, or 137th month, and hit an angle of 45°, and that the year 1930 was at the 1/2 point on the 4th square, a strong Resistance Point, which indicated a sharp, severe decline.

Again, 138 is at the 1/2 point on the Master 12 Chart.

1933 will be on 141, in the 8th zone, and at the center or 1/2 point of the 2nd quarter of the

square of 20

New York Stock Exchange yearly 20 X 20 Chart (May 17 1792)

The angle Gann is referring to in 1931 is the minor angle starting down from 1912 through 1988

Gann also referred to In May – June 1931, in those months we had a Jupiter Pluto conjunction.

UNITED STATES STEEL NAME CHART

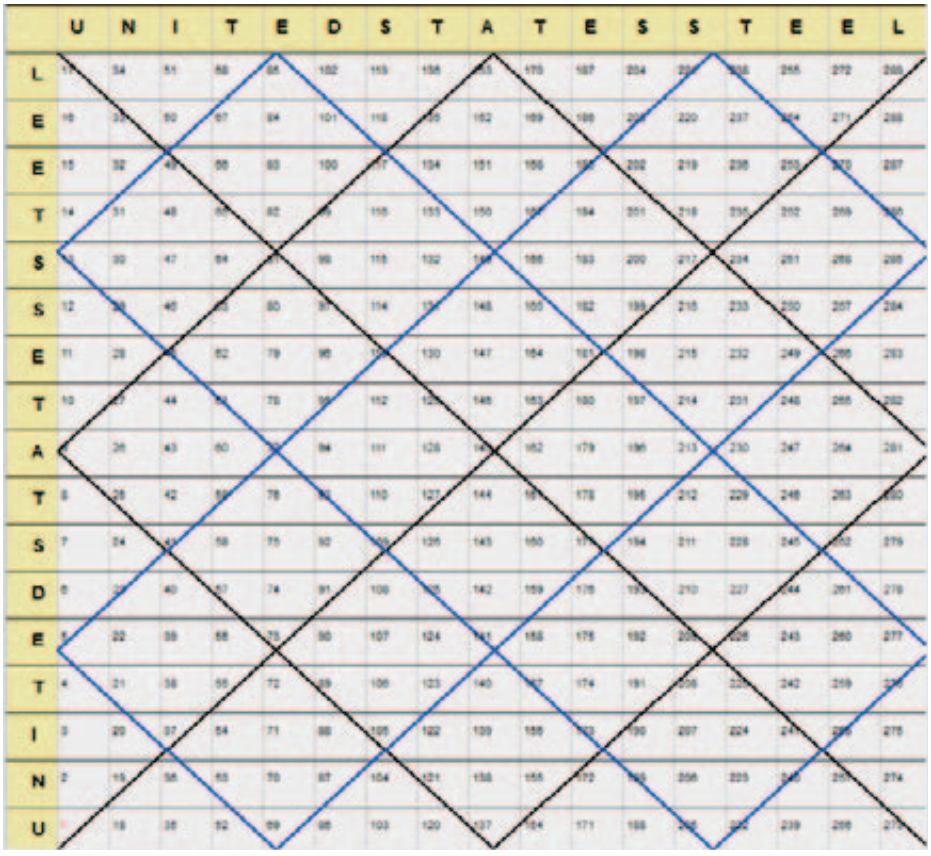

The name, United States Steel, contains 17 letters. Therefore, to make up a Permanent Square for United States Steel, according to its name, will require 17 x 17, or a Square of 289. Therefore, 17, which is really 2-1/2 times the lowest price at which Steel ever sold is an important point.

The prices 34, 51, 68, 85, 102, 119, 136, 153, 170, 187, 204, 221, 238, 255, 272 are all important because they strike important vibrations on the name and angles of U.S. Steel.

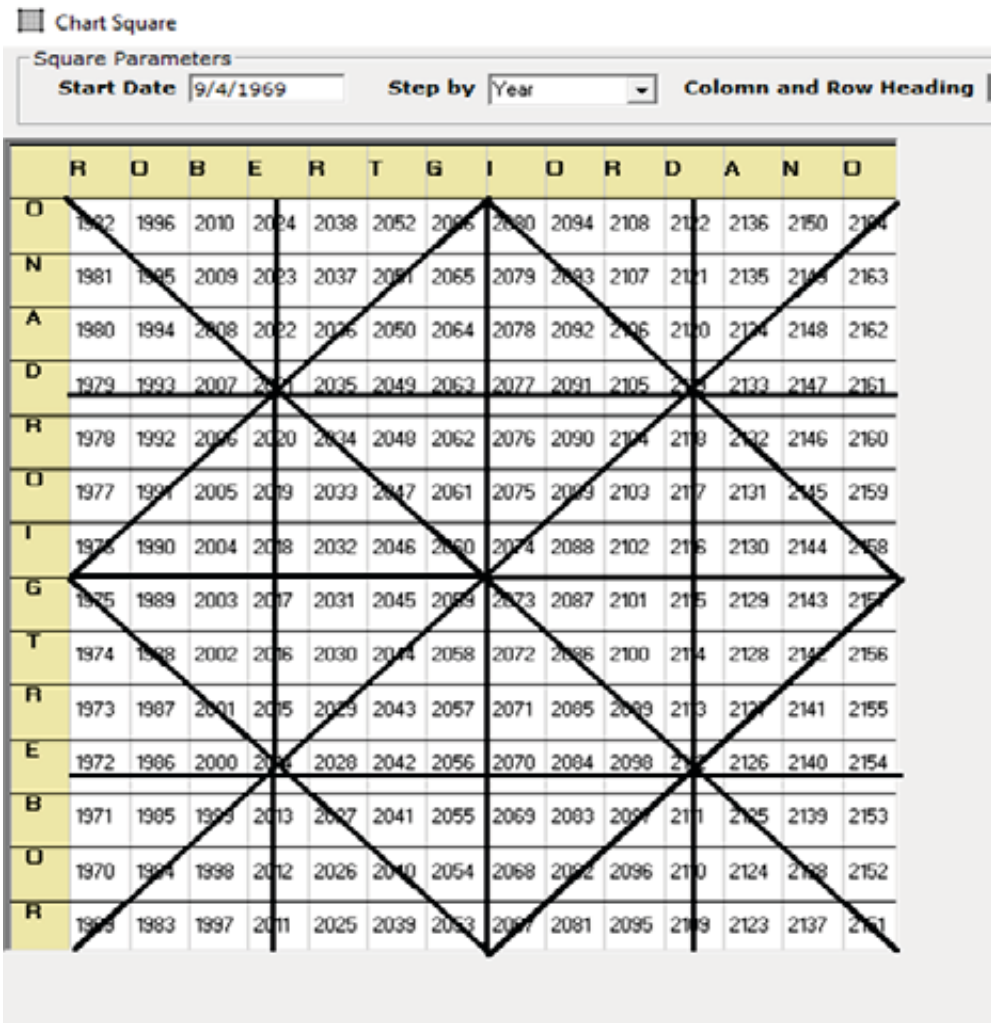

The basic number or low point, for example, 9, the lowest digit on US Steel, and it's vibrations according to its name, all cause slight variations at times from other stocks, because each stock works according to its own base, beginning point, numbers and name.

US Steel works good to the natural angles and Master Chart, because its digit is 9 and comes out on exact 9 vibrations all the way through, finishing at 261, which was 28 nines from its beginning point, or lowest level.

United States Steel Price Square 17 x 17 chart (1 – 289)

My Name, Robert Giordano Yearly Chart 14 x 14 Chart (Sept 4 1968)

According to this method 2021 is a very powerful 4th demension period for me, at some point within that year the vibration of letters D and E will manifest within my life. It's also 1 year shy of 6 x 9 year cycles, 53rd year of my life. More on this method within future works.

Overview of our "Gann Grid Master's 2.0 software" and "Combined View of the Masters Book Series"

After many years testing different market forecasting systems, invented and explained by the so-called modern day forecasting masters, I have come to the following conclusion; To me, only a small and elite group of traders consistently show an accuracy ratio well above the laws of chance. This conclusion came only after several key concepts had been found hidden within their legendary works.

The scope of my books and software series are based on the works of:
WD Gann
George Bayer
RN Elliot
Edward R Dewey
Allen Andrews
Luther Jensen
Professor Donald Weston
James Mars Langham and others

The Combined View of the Master's book package give a basic, intermediate and advanced background on many forecasting methods of above authors. Many methods have also been built into our Master's 2.0 software for easy on screen use. This inclusive package will not only shorten the required learning curve down to a few short months but will also save its reader many years of trial and error research, accomplished by including many never before witnessed screenshots of the master's method in action.

Included within this package, is a full working version of our "New" 2.0 RT Gann Grid Masters Software, "The Combined Views of the Masters" 2 Volume Series, and several hard to find and out of print books for additional GGM research. Also included are the names of many modern-day authors found to be beneficial to the subject at hand.

Many Puzzle Pieces in One Place

As many who came before will tell, this subject starts as a curiosity however will soon become a multiyear or even lifelong obsession, don't let this happen to you as you can now learn from my personal time, experience and research as the
goal of this package is to simplify the masters forecasting methods for the professional and novice alike.

I wish someone offered a similar package to me over 25 years ago!
Wishing you all the best!
Robert Giordano

Orbital Trading Computers – High Performance Computers purpose-built to maximize trading performance

By Danny Payne

One critical and often overlooked aspect of trading performance is the computer you use to trade. As traders, we often focus our efforts on finding the best system or right instrument to trade, the latest indicator, and lowest latency brokerage, but unless you're trading on a high performance, purpose-built trading computer, your system never reaches its full potential. That's why I started Orbital Computers 7 years ago – to provide the highest performance, highest quality desktop and laptop computers, built specifically for traders. In this article we will cover what aspects of computer hardware are most important to maximizing trading performance, what to look for in a trading computer, and why Orbital Computers' Trading PCs are the finest available. If you'd rather have a trading computer expert guide you through configuring a trading PC, please visit our website or give us a call at 877 976 7510 and we'd be glad to give you a personalized recommendation.

How do we speed up trading performance?

The fundamental question when considering computer hardware for trading is – "how do trading platforms work and what components do these platforms stress?"
The goal of a properly designed trading computer is to process large volumes of market data as

fast as possible, to seamlessly display that data on multiple screens, to send and receive order data to the exchange with the lowest latency possible, and to do all of this with rock solid reliability.

We'll quickly cover a few core components and what aspects of those components are most important to the speed aspect of trading:

CPU – The Central Processing Unit is the brain of your computer. The CPU performs most calculations for normal trading workloads – generating charts, calculating indicators, processing orders, running your trading platforms, and much more. There are 2 important specifications to consider on the CPU: CPU Frequency (value given in GHz) and number of CPU cores. For most traders, best way to speed up your trading platform is to use a current-generation CPU with the highest frequency possible. Having a high CPU frequency leads to faster single-threaded processing of tasks, which will be the ideal way to speed up trading workloads. Aside from the CPU frequency, we also must consider the number of CPU cores. For most normal trading workloads, a 6 to 8 core CPU should be more than sufficient as trading platforms generally aren't heavily multi-threaded, meaning they primarily operate off one or a few CPU cores, at those cores' max frequency. The big exception to that rule is for backtesting and simulation tasks, which can often be multi-thread optimized and can make use of many CPU cores to rapidly process the task in parallel.

The fastest single-thread performance CPUs available today are the Intel Core i7 9700KF and i9 9900KF/KS, which run at 4.90 GHz to 5.00 GHz. These processors offer approximately 5.00 GHz frequency and 8 cores, which make them the ideal choice to maximize trading performance while keeping costs reasonable. The CPUs are available today are on the Orbital Silenced Trader X2000.

RAM – Random Access Memory is where most of your trading related data is stored while you are actively trading. Your trading platform and most of the charting data resides within system RAM, which allows the CPU to access and process the data rapidly. The more data, charts, indicators, platforms, web browser windows you have open, the more RAM is required. RAM capacity tends to be one of the most important specifications for trading performance. You don't have to go overboard on RAM – you just need 'enough' and having 'more than enough' won't increase performance (it won't hurt performance either, but you can save money here). So how much RAM is 'enough'? From our in-house testing, most traders should aim for about 4GB to 6GB RAM per monitor used for trading, with no less than 16GB. For a strong 4-6 monitor setup, 32GB RAM would be ideal without being wasteful.

RAM and network latency also play critical roles in maximizing trading performance. You want your order data to get to the exchange for execution as fast as possible. Opt for a hardwired ethernet connection instead of WiFi for the lowest network latency possible. All the RAM Orbital Computers uses is modern high frequency, low latency DDR4 modules with additional aluminum heat-sinks to always keep them running at full speed.

Proper System Design – A common problem with using off the shelf PCs from big-box stores for trading is their lack of proper power supply, cooling, and other supporting components. Modern computer hardware is designed to throttle performance down if any components start to run near their thermal or power limits. Big Box computer manufacturers will often put decent processors in their PCs but then fail to cool or power them properly, so they never run at their full potential. That's where Orbital Computers are different. We use top of the line CPU coolers from Noctua and Corsair that ensure the system stays We offer Fractal Design cases with sound deadening material on all internal panels, nearly silent hydraulic ball bearing fans, removable dust filters on all case intakes, silent fan mode fully-modular 80 Plus Gold certified power supplies from Corsair, and the finest Austrian designed Noctua CPU coolers. When combined, the total system is greater than the sum of its parts. Orbital Trading Computers are designed for Stability First. Once we achieve stability, we push performance further, so long as it does not decrease stability. We've been building high-performance trading computers for 7 years now, with thousands of happy customers.

Multiple Monitors – One major aspect to a well-rounded trading computer system is the monitor setup. Most day traders, particularly short term scalpers, benefit from having multiple screens to show them what's happening across the markets. For example, a rapid move in Oil might have broader implications for some equities you may be trading, so keeping an eye on various market segments can be a helpful tool in your toolbox. From my experience, the ideal monitor setup for most traders is somewhere between 4 and 6 monitors – that provides enough screen real estate where you can keep an eye on all the important charts, while not being overloaded with excessive amounts of data. My suggestion to most newer traders is to get a PC that has support for 4 monitors but start with 2 or 3 screens and add additional monitors as you progress. For a 2 or 3 monitor setup, I recommend not buying a dedicated monitor stand, provided your desk is wide enough that you can set 3 monitors side by side. For 4 monitors and above, a monitor stand is all

but mandatory.

A current trend is to use ultra-wide or large scale high resolution screens like the LG 43UD79-B – these screens are in the range of 42.5" (versus a normal desktop monitor around 24") and can be segmented into 4 virtual workspaces, essentially creating a 4 monitor setup without bezels in between the screens. The benefit to doing a large scale 4K monitor instead of a true 4x 1920x1080p quad monitor setup is mostly a cleaner and simpler setup with fewer wires and no bezels, less mounting hardware, and lower power requirements. However, your usable screen real estate – the primary feature we're looking for – is slightly limited compared to a proper quad 24" monitor setup. The 42.5" single monitor provides about the same screen real estate as a 4x 21.5" monitor setup. For about the same price, you could do a 4x 24" monitor setup and gain a substantial amount of additional usable screen space. This kind of multi-monitor setup also allows you to expand the number of monitors one at a time to keep initial costs down.

Just a quick word on using 4K TVs for trading use – while it may look like an attractive, cost-effective option, using TV screens for trading is not recommended. Even high quality 4K TVs have excessive amounts of input lag and can cause eye fatigue if employed similarly to a monitor.

Why Orbital Computers?

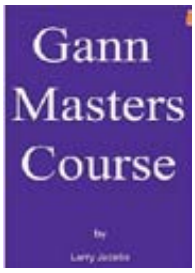

Operating under the principle of Stability First, Orbital Computers are purpose-built for traders. We don't cut corners, we individually stress test every PC prior to shipping, and we offer an industry-leading warranty by default. All systems come with a 3-year parts warranty, lifetime tech support provided by Orbital employees exclusively from our WA state office, lifetime labor, 3 years on-site service, overnight parts replacement, and more. Shipping is always free within the contiguous US. All of this is offered at industry-low prices. If you're looking for a top of the line trading computer, click here to contact us and we'll put together a customized system that meets all your hardware and pricing requirements. Take a look at our website here and don't forget to use **coupon code 'TradersWorld' for 3% off all orders!**

Amazon Kindle Books

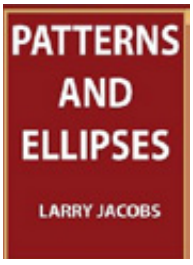

Gann Masters Course by Larry Jacobs $9.95

As you know, W.D. Gann was a legendary trader. Some say he amassed a fortune in the the markets. He wrote several important books on trading as well as a commodity trading course and a stock market trading course. He charged $3000 to $5000 for the trading courses which included 6 months of personal instruction by phone. The Gann Masters Trading Course to help traders become successful.

A Unique Approach to Forecasting by Ivan Sargent $32.95

This book is possibly one of most advanced books in technical analysis you will read regarding price and time reversals. Knowing the Price and time of a stocks reversal point is undeniably an important element for to successful trading. Unlike most trading books which use indicators, oscillators, and basic geometry to forecast the markets outcome; this technique uses a series of lines which when accurately placed can deliver reversal points with amazing accuracy. Trend lines, retracements lines, channels, fan lines, pivot points etc, all inspect a stock chart from the outside, which is more or less the obvious point of view.

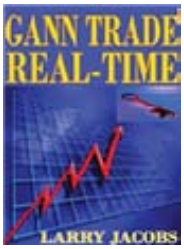

Patterns and Ellipses by Larry Jacobs $9.99

This book concerns itself with a highly technical subject, the subject of technical analysis of the financial market. This book specifically deals with ellipses and pattern formations used for trading the markets. It also covers many other technical analysis tools that can be used effectively by the trader.

Gann's Master Charts Unveiled by Larry Jacobs $9.99

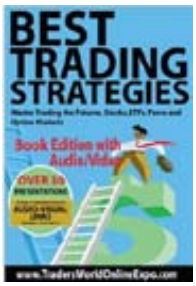

We know that Gann used the Pythagorean Square because he was found carrying it with him into the trading pit all the time. This square was hidden in the palm of his hand. How did he use this square? Why did he not discuss the use of this square in his courses? There is only one page covering the Square of Nine in all of his books and courses. Was this square his most valuable tool? These and all the other squares Gann used will be discussed in detail in this book with many illustns and examples to prove how they work.

Gann Trade Real Time by Larry Jacobs $9.99

When you opened this book you took the one step that will help you learn how to be successful at the most desirable, but hardest profession in the world. That profession is real time trading. This book is not going to give you an instant secret to day trading. It is going to give you the basics so that you might start the path to understanding how the markets work both short term and long term. You need to know and fully understand the markets and develop successful trading

strategies to become successful at this endeavor.

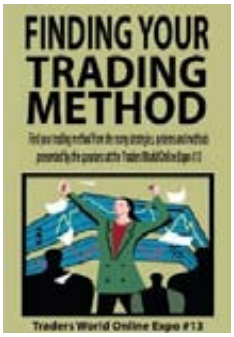

Best Trading Strategies: Master Trading the Futures, Stocks, ETFs, Forex and Option Markets $3.99

This is one of the most fascinating books that was ever written about trading because it is written by over thirty expert traders. These traders have many years of experience and they have learned how to turn technical analysis into profits in the markets. This is extremely difficult to do and if you have ever tried to trade the markets with technical analysis you would know what I mean. These writers have some of the best trading strategies they use and have the conviction and the discipline to act assertively and pull the buy or sell trigger regardless of pressures they have against them. They have presented these strategies at the Traders World Online Expo #14 in video presentations and in this book.

What sets these traders apart from other traders? Many think that beating the markets has something to do with discovering and using some secret formula. The traders in this book have the right attitude and many employ a combination of fundamental analysis, technical analysis principles and formulas in their best trading strategies.

Trading is one of the best ways to make a lot of money in the world if one does it right. One needs to find successful trading strategies and implement them in their own trading method. The purpose of this book is to present to you the best trading strategies of these traders so that you might be able to select those that fit you best and then implement them into your own trading.

I wish to express my appreciation to all the writers in this book who made the book possible. They have spent many hours of their time and hard work in writing their section of the book and the putting together their video presentation for the online expo.

Finding Your Trading Method $3.99

Finding your trading method is the main problem you need to solve if you want to become a successful trader. You may be asking yourself, can I find my own trading method that will reflect my own personality toward trading? For example, do you have the patience to sit in front of a computer and trade all day? Do you prefer to swing trade from 3-5 days or do you like to hold positions for weeks and even months? Every trader is different. You need to find your own trading method.

Finding out your trading method is extremely important to produce a profitable benchmark that can be replicated in your live account. Perhaps the best way to find a successful trading method is to listen to many expert traders to understand what they have done to be successful. The best way to do that is to listen to the Traders World Online Expos presentations. This book duplicates what these experts have said in their presentations,

which explains what they have done to find their own trading method.

If you have a trading method that gives you a predictable profit, then that type of objectivity contributes to your trading edge. The problem with most traders is that being inconsistent will never allow them to have an edge. After you find your trading method that you feel comfortable with, you must have the following:

An overall plan to:
1) Set your rule set and plan and then stick with it in all of your trading.
2) To give you a trading plan for every day.

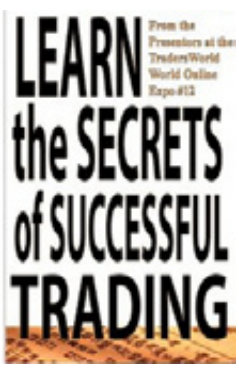

The trade plan then should:
1) Have an exact entry price
2) Have a stop price
3) Have a way to add positions
4) Tell you where to take profits
5) Have a way to protect your profits

By reviewing all the methods given in this book by the expert traders, it will give, you the preliminary steps that you need to find your footing in finding your own trading method.

Reading this book and by seeing the actual recorded presentations on the Traders World Online Expo site can act as a reference tool for selecting your method of trading, investment strategies and tactics.

It took many of these expert traders in this book 15 – 30 years to finally come up and find the answers to find their trading method to make consistent profit. Finding your trading method could be then much easier when you read this book and incorporate the techniques that best fit your personality and style from these traders. This book will enable you to that fastest way to do that.

So if you want help to find your own trading method to be successful in the markets then buy and read this book.

Learn the Secrets of Successful Trading $3.99

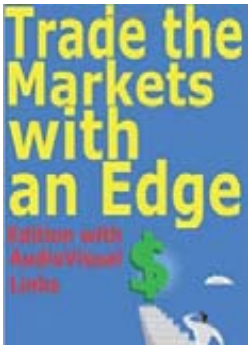

Learn specific trading strategies to improve your trading, learn trading ideas and tactics to be more profitable, better optimize your trading system, find the fatal flaws in your trading, understand and use Elliott Wave to strengthen your trading, position using correct sizing to trade more profitable, understand Mercury cycles in trading the S&P, get consistently profitable trade setups, reduce risk and increase profits using volume, detect and trade the hidden market cycles, short term trading by taking the money and running, develop your mind for trading, overcoming Fear in

Written by Many Expert Traders

The book was written by a large group of 35 expert traders, with high qualifications, most of who trade professionally and/or offer trading services and expensive courses to their clients. Some of them charge thousands of dollars per day for personal trading! These expert traders give generally 45-minute presentations covering the same topics given in this book at the Traders World Online Expo #12. By combining their talents in this book, they introduce a new dimension to finding a profitable trading edge in the market. You can use ideas and techniques of this group of experts to leverage your ability to find an edge to successfully trade. Using a group of experts in this manner to insure your trading success is unprecedented.

You'll never find a book like this anywhere! This unique trading book will help you uncover the underlying reasons for your lack of consistency in trading and will help you overcome poor habits that cost you money in trading. It will help you to expose the myths of the market one by one teaching you the right way to trade and to understand the realities of risk and to be comfortable with trading with market. The book is priceless!

5) The finest trading education

CRAIG TRADING: Craig Haugaard made 300.9% in his World Cup Trading Championships® Account in 2014 - Want to Know How? $3.99

This book contains an interview that I made with Craig Haugaard, third-place finisher in the 2014 World Cup Championship of Futures Trading® with a 300.9% net profit. I asked him many questions on exactly how he did it.
In the rest of the book I explain to you how to use the indicators that Craig used to make his 300.9% return.
Here are the indicators that he used:

- Seasonality
- MACD
- Stochastics
- Moving Averages
- Trailing Stops
- Fibonacci Retracements & Extensions

All of the charts in this book are produced using my favorite charting software Market-Analyst®. I have also arranged for you to get a FREE trial so that you might have the chance to actually work with these indicators with a real charting platform.
You will also be able to view the video presentations that I personally created so you can see how these indicators can be setup and followed with clear and concise step-by-step instructions. After you understand how these indicators work, I would then recommend that you go to WorldCupAdvisor.com and consider following Craig Haugaard's real-time trades.

This one-of-a-kind book teaches you how to identify the direction of the markets and trade the markets by using popular trading indicators. This is done by concise instructions backed by learning videos, hands on practice with real trading software and by following real-time trades of a master trader.

- How to Stop Guessing
- How to Get the Right Trading Computer
- Simple and Practical Trading Tips
- And much more…

This book is an enhanced Edition which means that the articles are backed with audio visual presentation links. Most of the presentations are in HD quality and are put together by the writers of the articles in the book and really help the learning process.

Successful trading is based on knowledge and having the right psychology to trade the markets. This book will lift your trading to a much higher level and will save you an enormous amount to time.

Trading with Success $4.99

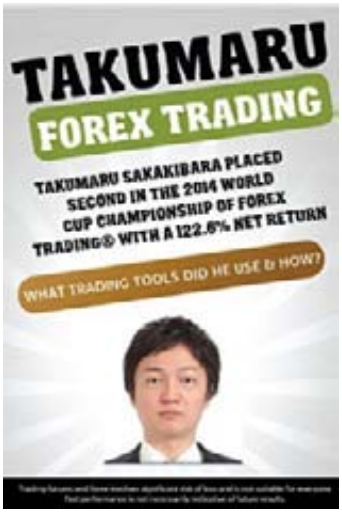

This book contains an interview in Chapter 1 with Rob Mitchell, who finished in 2nd place in the 2014 World Cup Championship® of CME E-mini Trading with a 57% net profit.

Rob Mitchell is the president of Axiom Research & Trading, Inc. and has been a trading system developer for over 20 years and has developed a number of commercially successful trading systems. He has at various times been the largest eMini S&P trader in the world. Rob has also acted as a Commodity Trading Adviser, has traded for hedge funds and has won the Robbins World Cup eMini trading championship in the past. Rob is a trading teacher and mentor and is the founder and head trader of Oil Trading Room which is devoted to providing advanced educational resources to traders at all levels.

In the rest of the book I will explain to you some of the trading ideas of Rob that he uses in both his Oil Trading Room and in his World Cup Advisor Account. You can then actually see and understand how some of his ideas work.

I am not going to tell you exactly how Rob used the ideas to make his return of 57% on a $10,000 investment. That information is not public and belongs only to Rob.

I will tell you some of the trading ideas he uses and help you understand how these ideas work. I would then recommend that you go to World Cup Advisor and consider following Rob's trades. You will be able to automatically mirror Rob's trades in your own brokerage account with World Cup Leader-Follower AutoTrade™ service. You will also be able to see what his trades look like on your own charts and better understand why he made the trades.

Takumaru Forex Trading $4.99

This book contains an interview in Chapter 1 with Takumaru Sakakibara, who finished in 2nd place in the 2014 World Cup Championship of Forex Trading® with a 122.6% net profit. "Takumaru's largest drawdown (cumulative peak-to-valley percentage decline in month-end net equity during the life of the account) was -21.5% from 6-30-15 to 10-31-15."

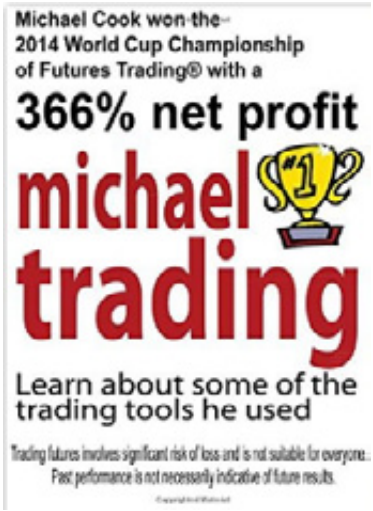

"Please remember that past performance is not necessarily indicative of future results."

"Please remember that Forex trading involves substantial risk of loss, and past performance is not necessarily indicative of future results."

In the rest of the book I will explain to you some of the trading ideas Takumaru said he used in

the championship. You can then actually see and understand how his ideas work.

I am not going to tell you exactly how Takumaru used the ideas to make his return of 122.6% on a $10,000 investment. That information is not public and belongs only to Takumaru.

I will tell you which indicators he used and help you understand how these indicators work.

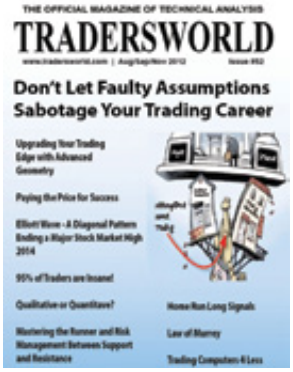

Michael Trading: Learn about some of the trading tools he used $4.99

Michael Cook, was the first-place finisher in the 2014 WORLD CUP Championship of Futures Trading® with a 366% net profit. In this book there is a detailed interview with Michael with questions and answers of exactly what he used to win the championship. In this book I will explain to you the indicators that he said he used in the interview. You can then actually see and understand how they work. Here are some the indicators and methods that he said he used: 1) Moving Averages 2) Seasonality 3) Cycles 4) Seasonality 5) Price Patterns 6) William's %R 7) Long with Stops 8) Commitment of Traders Report You will also be able to download a video presentation that I personally created so you can see how these indicators can be setup and followed in a step-by-step manner. After you understand how these indicators work, I would then recommend that you go to WorldCupAdvisor.com and consider following Michael Cook's trades.
