Own the Best Asset Now for 2021 – Leading Sectors Are The Secret

By Chris Vermeulen

Developing a trending model is fairly simple. Pull up a 50 period Moving Average on any price chart and you have a basic trending model. When the price is above the 50 period Moving Average and moving average is moving higher, you have an uptrend in place. When price is below the 50 period Moving Average and MA is moving lower, you have a downtrend in place.

The issue is not creating a trending system to determine if the markets are trending higher or lower. This biggest issue for traders is picking stocks or sectors that are poised to trend stronger and faster than other stocks/sectors. In other words, selecting the best future performing stocks/sectors is key to developing superior results over the long-term – not just trending.

Typically, long term market trends cycle through a series of phases leading to two of the most advantageous phases for traders: Bearish and Bullish phases. Being able to identify and catch these profitable cycle phases within broad market trends is essential. Being able to structure and rank various stock symbols and sectors into an accurate means of identifying the potentially strongest Bullish or Bearish phases would allow us to quickly identify the best trading opportunities for Bullish and Bearish phases.

After years of research and testing, that is exactly what we have created: The Best Asset Now (BAN) system.

Long Term Market Stages

We only buy sectors in a Bullish Stage... Putting the odds in our favor

Short Term Market Trend

Part of the BAN strategy is the ability to find stock symbols and sector ETFs that align with the broad market trends, market trend cycle phases and short term market trends. When all of these align and our BAN ranking system, we know the top ranked symbols and sector ETFs are likely to become the strongest performing assets as the trends mature.

By putting all the odds more in our favor using this method of trend, cycle and phase alignment, then applying the BAN ranking methodology, we are able to take advantage of only the best setups for the biggest future trends.

Difference Between Leading and Lagging Sectors

The strength of the BAN system is the ability to use leading technical setups as a criteria for BAN ranking. This is the difference between huge success and under performance. We've identified a strong character set of leading technical setups and patterns that we use to create the BAN ranking system. Using this tool, we wait for the trend, cycles, phases and ranking to align, then we execute strategic trades to own the Best Asset Now during new stock market buy signals.

What sector ETF would you rather own? Its pretty clear how the market leading stocks crush the everything else.

Recent BAN ETF Trades

The BAN system is something that we feel gives us an edge over other trading strategies. After years of testing and development, we've identified a way to identify the best trade setups in both Bullish and Bearish trend cycles. If the market dynamics change within a trend, our BAN ranking utility will quickly identify the change in the market and adapt to this change by ranking the new best opportunities appropriately.

This gives you a good visual of what market leaders look like compared to the stock market averages, and how you can outperform using this [proven trading strategy we teach here for free](#).

Scaling Out of Trades

Each of these new BAN trade setups represent a unique opportunity to ride out a price trend that usually spans at least 5% to 20% on average – possibly much higher. We’ve identified three key areas where the BAN strategy must take profits out of the trade. By executing these take profit trades at key advancement levels, the BAN strategy is able to lock in profits, reduce risk exposure and accrue success over longer trend runs - allowing for maximum returns while keeping a high win rate for our trades.

Symbol	Entry Date	Entry Price	% Pos	Targets	Exit Date	Exit Price	% Ret.
GDX	April 13 2020	28.65	33				
				7%	April 13 2020	30.65	7%
				15%	April 23 2020	33.21	16%
				20%	April 23 2020	34.38	20%
				Trend Exit			
				15% Stop	June 5 2020	31.86	11%

Become A BAN Trader!

- ✓ No more time-consuming research
- ✓ Daily Video Analysis & Education
- ✓ Outperform the market with fewer trades, and lower drawdowns
- ✓ Profit from market volatility and sector rotation
- ✓ Let us select and send you the best ETFs to trade

Concluding Thoughts:

Although we won't disclose the entire BAN strategy in this article, we can share the newest BAN trade setups, trends and the BAN Hot List with you when you become a BAN Trader Pro member, or you can learn to do it your self in the [next free webinar](#) we host. BAN is so dynamic as a core-trading system for any type of trader that you could combine BAN Trade Pro with various types of discretionary trading styles or longer term investment techniques.

Learn more about BAN Trader Pro by visiting www.TheTechnicalTraders.com

Make 2021 the best year yet and prepare for the biggest trends in the future.

THE TEXTBOOK OF GANN ANALYSIS...

THE PATH OF LEAST RESISTANCE

THE UNDERLYING WISDOM & PHILOSOPHY OF W. D. GANN ELEGANTLY ENCODED IN THE MASTER CHARTS

BY DANIEL T. FERRERA

MOST DETAILED COURSE ON GANN'S MATHEMATICAL & GEOMETRICAL TOOLS!

"WE USE THE SQUARE OF ODD AND EVEN NUMBERS TO GET NOT ONLY THE PROOF OF MARKET MOVEMENTS, BUT THE CAUSE." - - - W.D. GANN

- ◆ How to square the natural whole numbers (odd and even), along with their midpoints.
- ◆ How to define price scales by "The Basis of Money"
- ◆ How to set the proper scale, and use the 1x1 angle to square or balance price with time.
- ◆ How the natural squares (even & odd) sub-cycle would not be possible without understanding the Spiral chart (Square of 9).... expressing the square root as an "inner square" time period.
- ◆ How to assimilate all of these elements together as a sequential methodology once the "basis of Gann's forecasting method" has been worked out.
- ◆ How Gann's price squaring techniques and master charts are NOT completely separate and independent methods, but are tied together thru geometric angles.
- ◆ How the inner square root sub cycle & natural squares of numbers reveals unique market turns.

INTENT OF THIS GANN COURSE

The intent of Ferrera's new course is to **provide the most comprehensive elaboration of W.D. Gann's most powerful technical trading tools**. It presents all of Gann's foundational mathematical and geometrical techniques expressed in his master calculators, angles, trend channels, squaring processes, pattern formations, spiral charts and much more, leading to the clear identification of **profitable Trade Setups, important trend indications, and critical price/time culminations**.

The material further **elaborates** a number of Gann's most advanced geometrical tools and applications, such as **the natural squares (even & odd) sub-cycle and the square root as an "inner square" time period**. It provides both **practical and actionable trading signals and a valuable structural perspective to any market on any time frame**.

With 300 pages of detailed text, over 150 charts and diagrams, and 190 pages of the rarest Gann's supplementary material, we consider this 500 page treatise to be **THE TEXTBOOK on Gann's geometrical techniques** that no serious Gann analyst can be without!

FERRERA'S NEW COURSE—THE ART OF THE TRADE

W. D. GANN'S SYSTEM OF CHART READING & PATTERN TRADING

Dan Ferrera's new trading course, *The Art of the Trade*, provides thorough instruction in W.D. Gann's key trading methodology, **Pattern Trading**. It teaches "Chart Reading" the way Gann himself did it, demonstrating how to trade the fundamental market patterns identified by Gann. This strategic approach to trading provides advantages that allow the trader to react to the markets in real-time, without indicator lag. Pattern Trading eliminates lagging mechanical indicators, which are always based on what the market did in the past and not the present. This style of "Form-Reading," as Gann called it, allows one to make decisions in real time, as the opportunities develop on the chart.

The course provides a clear set of rules for reading these market patterns to determine entry, exit, risk management, and trade management as determined by the recognition of a set of fundamental market patterns identified by Gann. This approach differs from Gann's mechanical swing indicators and from his long-pull position trading, providing a different perspective and alternative trading style, that most often used by Gann himself. The technique is equally effective on any time frame, so is as valuable for day-traders as it is for daily traders. It also generates a larger number of trades than his other trading methods.

FOR A DETAILED WRITEUP ON THIS COURSE INCLUDING FULL CONTENTS, AND SAMPLE SECTIONS SEE:

Creating the Perfect Storm

By Eric Penicka and Ken Adkins

A large percentage of traders are using astrological indications to help with their trading. In this article, some brand new astrological techniques will be highlighted.

There is a new book available from Cosmoeconomics.com called "The Perfect Storm". This book introduces many new astrological techniques that have not been published before. These techniques are capable of identifying turning points and trend indications for swing trading, and also for intraday trading. Some examples of one these many techniques will be demonstrated here.

One of the primary techniques in the book is the astro trend line indicator. This tool is developed in Excel and is also programmed in Ninjatrader. The chart examples shown are using the Ninjatrader plot.

This tool plots three lines which can indicate trend and turning points. The green line is the larger planetary trend and is usually the dominant line. The blue line is a shorter term trend, but it will be dominant at times. The gray line is the short term trend and is used more for turning point times than for trend.

The indicator can be plotted on any time frame. The Excel tool gives plots for a month, a week, a day, two 12 hour plots, and also a 2 hour plot. The 2 hour plot uses the gray line for indications and it can be quite accurate at predicting trend on a 1 or 2 minute chart.

When looking at a chart to project the likely trend, look at the green line first. If the green line is stepping up, the trend will likely be up. When the green line is moving down, the trend will likely be down.

The blue line will also have an influence and can be dominant at times. The following chart is a good example of the two lines interacting to project a trend indication.

This indicator plots in advance and never changes. It is not self adjusting, it is set by planetary activity and can be projected out for years.

The following chart is from 10-26-2020, one of the examples taken from the book.

On the chart are four text boxes, two marked top, and two marked bottom.

On the left of the chart, note the box marked top. Now look at the bottom of the chart, notice

the position of the green and blue line. The blue line is peaking, and the green has not. In this instance, the blue line is dominating, and the market peaks just before the blue line peaks.

There is an arrow just to the left edge of the first text box marked top. This arrow is marking a spike high on the gray line. These spike highs or lows in the area of the blue line top or bottom, indicate the area where the market will reverse most of the time. Look at the gray line spike on the indicator at the bottom of the chart, and see how it correlates exactly with the price high. This is the high of the evening session.

From this point, a down trend is anticipated. The most powerful trend indication is where the green and blue line are moving in the same direction.

The green line peaks at 1100-0100 hours and the two lines start moving down in sync at about 0045 hours.

This indicates a down trend until both lines go flat just before 0400 hours at the text box marked bottom. This is the area where a low is expected. It happens to come in at a gray line spike in the bottom of the indicator panel where the blue and green line hit bottom.

Now the green and blue line are both moving sideways, or what could be termed "flat lining" and then they turn up together which is indicating a choppy period with an upward bias.

This consolidation area, or period of low volatility in the market happens as a result of very little planetary activity occurring, so therefore, there is not much influence on trader psychology in these time periods to move the market.

Now notice, just after 0800 both the green and blue line start to turn up. The price action bottoms at this time and then starts to move up in tandem with the trend indication of the indicator lines.

As the market moves up, the text box marked top shows the green and blue line peaking around 1030 hours. The price action peaks exactly in sync with the blue and green line peaking and the price reverses and starts moving down.

The two lines track down until around 1300 hours when both lines reverse and make a small upward bump up. What looks like a minor indication is enough to move the market up in a reactive reversal to the dominant trend. This is a shift in energy and this shift causes the market to reverse and gives the trader an opportunity to take profit or reverse position to go long. The low is marked by an arrow on the chart. The arrow marks a gray line spike which happens as the blue line bottoms. Now that both lines have bottomed, the move up takes place.

The blue line peaks with a gray line spike indicating the projected high area marked by the text

and arrow on the chart. The market starts to chop and makes the actual high where marked on the chart by arrow and text. This is a good place to get short.

The market bottom where the green and blue line bottom. This is marked by the last text box on the chart and indicates a move up will begin in that time frame. The bottom comes in and the market price action starts trading up.

There is a scale in the indicator panel. The range of the indicator moves between -40 and 40. Getting to those extremes is rare. When the indicator is bouncing between =10 and +10 the indication may not be as strong. When the indicator is moving to the more extreme levels outside the 10 lines the trend and turn indications can signal more powerful reversals. When the green line and blue line are moving up together, and stair stepping quickly, the price action move can be parabolic.

One more example of another day.

This chart starts off with the green and blue lines conflicting. The blue line is up and the green line is down. This is what is termed to be a cross current, and two things can happen. One outcome is a choppy market. The other is one of the lines will be dominant. In this case the green line is dominating.

On the section of the chart marked bottom, the bottom comes in before our expected bottom indicated by the green line. The green line bottom is at a higher low which is our opportunity to go long. The price action is up as the two lines turn up and then start to go flat. The energy produced by the lines tuning up stays in play until both lines turn down around 0700 hours. There is a corresponding gray line spike peak that happens a little after the actual market top at around 0950 hours.

With both lines in sync and heading down, a downward trend is expected. Any gray line spikes making highs in this time zone that correspond to market retracement highs can be used to enter short positions for the move down. The expected trend down lasts until after 1600 hours. A key point to be made here is the blue line turns up around 1200 hours and is now projecting a cross current. This cross current indicates likely up and down swings with a downward bias, which is exactly what happens in the afternoon hours of trading.

The following chart will illustrate the last example for this tool. The points in time where the blue and green lines cross are often changes of trend. The following charts show an example of using those for timing.

The points where the blue and green lines crossed are marked on the following price chart with blue arrows and the time.

This illustrates one of the tools that are offered in "The Perfect Storm". Many other tools and indicators are also included.

For more information on The Perfect Storm go to:

<https://www.cosmoekonomics.com/EZ/ice/ice/eric-penicka.php>

The book includes Excel based software that does all the calculations.

Perfectstormtrading.com is the authors website. Our website explains the features of the trading tools in detail and has further additional chart examples.

The Ninjatrader indicators can be leased through there. The indicators may be made available in other platforms in the future.

A day trading chat room will soon be offered to the public where we can explain the likely market activity for the day and key setup times with our charts on display.

We will also point out any major swing dates coming that week.

For videos of the indicators and what they can do, go to The Perfect Storm Youtube channel at:

<https://www.youtube.com/channel/UCWoWSa1lrz34vS7p1rZ7X6w>

GANN SCIENCE

The Periodic Table & The Law of Vibration

*THE SOLUTION TO GANN'S LAW OF VIBRATION
AS PRESENTED IN THE TICKER INTERVIEW*

BY ERIC PENICKA

ATOMIC ELEMENTS DEFINE MATHEMATICAL STRUCTURE OF MARKETS

HOW EXACTLY DOES THE PERIODIC TABLE OF ELEMENTS DEFINE MARKETS?

This course provides the solution to the Law of Vibration, as Gann originally presented it in his interview with Richard Wyckoff in *The Ticker and Investment Digest*, in 1909. The author takes Gann's exact words and correlates them with the cutting edge science of Gann's day to demonstrate what Gann meant when he said, "**stocks are like atoms**". He develops a system which identifies the key "mathematical points of force" that govern the structure behind the market.

The author builds a solid foundation in the Natural Sciences of Gann's day, showing how the emerging science of the **Periodic Table of Atomic Elements** provides a **system of order based upon the vibrational values of the elements** themselves. When the elemental structure is determined for an individual market, a **Master Number Set** will be defined for that market which determines its movement in price and time forever into the future. **A POWERFUL & HIGHLY PRACTICAL SET OF TRADING TOOLS! 480 Pages w/Forum.**

A DECODER FOR GANN'S TUNNEL THRU THE AIR MAGIC WORDS THRU THE ZODIAC

Vol 1 - A Guide to the Work - Vol 2 - The Advanced Findings

Volume 1 introduces the Keys to cracking the complex symbolic code that Gann used to conceal his greatest secrets within Tunnel. It unveils a Masonic Gematria cypher which serves to decrypt references and clues concealed in names, dates and other key words thru the text. These letter/numerical conversions are used to determine potential anchor points for the engineering of important underlying market cycles.

Volume 2 continues the research into more advanced topics and more deeply hidden and important cycles. The insights in these two volumes represents efforts from 20 years of tireless research!

THE TRADING METHODS OF W. D. GANN

MAGIC IN THE MARKETS IT'S TIME

TRADINGWDGANN.COM (312) 532.2116

The Scientific Foundations of Gann's Law of Vibration

By William Bradstreet Stewart

Gann's Law of Vibration has proven to be the precursor to new technologies and worldviews that were far ahead of his time. Current research into superstring theory, chaos theory, vortex physics, solar field theory, galactic structure, and quantum mechanics have confirmed many of the insights first applied by Gann. These theories provide The Key to a missing scientific component of universal force, order and causation, with a direct correspondence in nature, ultimately leading to a vision of a universal system that extends beyond the current theories of cosmology as defined by the scientific establishment.

What extends this theory beyond those of the modern scientific paradigm is the fundamental integration of the material universe and the immaterial universe, or the realms of consciousness, thought or psychology. In academic science, all ideas of consciousness are brain based and the materialistic perspective, as mentioned, denies the existence of anything but pure matter and energy as the primary construct of the cosmos. However, within the perspective of idealism, under which the Law of Vibration would be categorized, the distinction between the subtlest forms of energy and consciousness becomes blurred.

Of course, we are not speaking here of a brain based consciousness, but of a more metaphysical or energetic substrata, a unified field, which is not just purely materialistic or energetic, but by its very nature possesses some kind of intelligence responsible for all of the laws and ordering systems of nature that have created the universe as we know taking it from a random, disorganized, chaotic state of pure energy/matter to an organized state with stars, planets, and human with brains.

Modern science does not really ask the question: where does the "intelligence" of the universe come from? It just assumes that the laws of order and function are some form of inherent property of the universe itself, hence of matter itself, and similarly refuses to call it "intelligence", preferring not to anthropomorphize the concept. But this is a rather unreflective position, simply dismissing a question that cannot be answered from a materialistic perspective as if it has no reason to be asked. This is the way that materialistic science deals with many questions that it cannot answer, by dismissing them as invalid questions, or ignoring them altogether.

However, if one merely probes into the simplest of physical laws, one immediately begins to realize that to question the nature of the intelligence that defines the increase of order in the universe is really quite logical if not utterly necessary. For instance, the 2nd law of thermodynamics says that in an isolated system, entropy will always either remain the same or increase, or, in other words, order will always tend towards greater disorder, or energy will tend to dissipate and the system will run down.

An example of this would be to put a warm cup of coffee down on the kitchen table. After a 10 minutes it is not so warm anymore, because the heat has dissipated into the open space. You never put a cold cup of coffee down on the table and have it turn warm, it is only the other way around. The system runs down from a state of higher order to lower order. Spilt milk never un-spills, a broken glass never un-breaks, and an ice cube doesn't un-melt.

This being a fundamental law of the universe, one must then ask what mechanism, impulse, or function is responsible for "negentropy" or reverse entropy, which takes things from a state of disorder to ongoing states of greater order. What organizes a nebulous space cloud into a star, planets, moons and organisms, and onward continuously to more and more sophisticated and complex biology elements like nervous systems, eyes and brains? In a universe where entropy operates, what is that the cause of the reverse or non-entropic principle that creates greater order out of the initial chaos? Why does the universe run UP instead of running DOWN? With all of its supposed wisdom, science does not provide an adequate answer to this most fundamental problem, and from the standpoint of pure materialism, such a question is not easily answered.

However, in a universe based upon the principles of Idealism, where the base field of the cosmos is inherently intelligent, with functional laws of directive organization and principles of mathematical, physical, biological and psychological complexity building, such questions are easily answered. From this perspective, the inherent intelligence of "the field" orders the development and structure of all planes whether they be material, matter being nothing but a slowed down form of this intelligent energy, or immaterial, such as some kind of mental or more subtle plane.

The Law of Vibration presents a theory of the financial markets as energetic mental or social phenomena governed by the strict laws of physics and mathematics, operating within the domain of space and time. This phenomenon is not limited to the nature of the financial markets alone, but rather extends to the mechanical laws which manifest all order across the universe. For the inherent laws of mathematics are pervasive throughout all fields of reality

simultaneously, and the same vibratory phenomena that define the permutations of market structure similarly define the permutations of all function and form, all physics and metaphysics, structuring the very core of reality itself.

Abstract concepts in physics like Space/Time directly correlate with financial concepts like Price/Time, because they are actually the same thing, but on different planes. The exact same mathematical laws control all energetic formations within this vast multidimensional Cosmos. Therefore, the Law of Vibration is not restricted merely to the limited fields of economics and finance, but is better defined as the essence of Cosmology itself, the system of mathematical and scientific order which permeates the fabric of the entire universe.

EMMANATIONAL COSMOLOGY – THE QUADRIVIUM & TRIVIUM

In the world view of Idealism, or the Law of Vibration, there is what is known as an “emanational cosmology”. From the initial state of the unmanifest pure field, the first thing that exists is pure vibration, such as is posited in String Theory. What is vibrating is pure energy, though this energy may be of a very subtle, even unmanifest form. In this pure form, this energy is like pure number, or a Gann often quotes Faraday saying, *“There is nothing in the Universe but mathematical points of force”*.

As these points begin to move in vibration they establish harmonic relationships between each other, or ratios, and these relationships can now be defined as Music or Harmonics. As the Harmonics increase, these frequencies or tones also begin to relate and interact with each other now creating another dimension of space characterized by Geometry. As this Geometry is further dimensionalised through time and motion, we now get Astronomy. These four subjects were defined by the great forefather of science, Pythagoras, and are called the Pythagorean Quadrivium.

This Quadrivium can be looked at in two different ways, first as this emanational cosmology wherein the simplest variable become sequentially more complex by adding additional ranges of dimensionality, activity and relationship, evolving a progressively more sophisticated universe as a result of the pure vibration being subjected to greater degrees of universal order through relationship.

These are traditionally called the four Classical “Liberal Arts”. Amusingly, most people who get a “Liberal Arts” education, and indeed most college professors who teach the subject, if asked what exactly the Liberal Arts are, will be unable to give you the correct answer. There are seven traditional Liberal Arts, the four Classical Pythagorean of the Quadrivium, Arithmetic, Music, Geometry and Astronomy, which govern the material world, and the three Medieval Liberal Arts, or Trivium, Logic, Grammar and Rhetoric, which govern the mind.

These 7 Liberal Arts in the ancient and traditional system of knowledge, upon which all of the original university systems were based, are considered to be THE foundations of ALL knowledge, generally the Quadrivium pertaining to the cosmos, and the Trivium to the mind. One might argue that there are many other branches of knowledge beyond these, but that would be misperceiving what is actually meant by these principles. From a traditional perspective, each of these Arts was considered an entire systemic methodology for communicating the complete order of the universe itself, from a particular perspective. They are, in essence, systems of Symbolic Logic, capable of defining by their values and principles the entire system of laws of the cosmos.

Each of these systems is like looking at a diamond through a different facet, while all showing

the same diamond. As such, this then implies that each of these systems is capable of deriving its own system of language to

communicate the principles and laws of the whole according to its own values. This being the case, it becomes evident that any universal principle can potentially be communicated in multiple languages or through different variables.

Thus, there is then a correspondence between a variable in one system and the equivalent variable in a different system. So, taking the Quadrivium, that means a number can be represented by a sound, which can be represented by a form, which can be represented by a motion, and extending it to the Trivium, it means that each prior variable has an equivalent Logic or sequence, which can be represented by a symbol (Grammar), the combination of which inevitably represent a communicable meaning (Rhetoric). In Esoteric Tradition, these multi-categorical cross-relationships are defined by what is called the Law of Correspondences.

One could also consider the relationship of the Quadrivium as the 4 quantitative elements as relates to matter or physical phenomena, while the Trivium represents the qualitative orderings systems as pertains to mind. Since the Law of Vibration seeks to correlate ordering principles of cosmic phenomena with the psychological patternings of mind, the Doctrine of Correspondences would then determine a correlation through the systems of symbolic logic between the physical phenomena and mental phenomena, or in our context, a relationship between physical ordering systems and mental systems, both psychological and social, being mass psychological. Of course, this is a gross simplification of a complex metaphysical and scientific doctrine, but it serves to give a sense of the basic premise...

Looking at it esoterically, we have gone from an abstraction of pure unmanifest, mathematical vibration to a state of fully manifest ordered structure all the way down into the mind of man and patternings of mass psychological phenomena in only 7 progressive steps. When metaphysical or spiritual doctrine describes "creationism" it is really to this sort of a process it should be referring, not to some medieval, uneducated concept of a God with a grey beard waving a wand and magically manifesting

the universe and man in only 7 days. Sadly, the religious believers of today are even more disconnected from the true esoteric doctrine that would give real meaning to their spiritual dogma than even the materialistic scientists.

In reality, these "7 days of creation" referred to in Genesis are equivalent to these 7 stages of manifestation from pure abstraction to manifestation in the physical plane and the mind of man. This process is not actually so far off from much mainstream scientific cosmological theory when it is put in the proper context! And indeed, it is even a clear form of "evolution," though in a much broader and more sophisticated sense than is understood by the

limited concept of evolution today, really a cosmological evolution. Even Darwin, when his ideas are fully explored, did not necessarily propose a fully mechanistic system without any kind natural intelligence behind it.

But this should be no great surprise, since as we said in the section on Origins, ALL modern science is but a derivation of these original esoteric theories of the Ancients, and can be considered a subset of a greater wisdom that has been lost as science attempted to wrestle itself away from its roots, desperately grasping at half the equation, materialism, while metaphorically throwing the baby of idealism out with the bathwater of misunderstood metaphysics.

So, in essence, the Law of Vibration IS this emanational cosmology using multiple systems of symbolic logic to define a progressive system of natural order emanating through fundamental laws as the universe manifests from a Unified Field defined by a form of String Theory. It projects from the unmanifest abstract planes to the manifest material planes, which are composed of nothing but slowed down forms of energetic vibration perceived as solid matter, and works its way down into the very structure of the mind of humanity itself. This matter is fully controlled and influenced by the underlying vibratory principles of universal order, as communicated through the specific interrelated variables of any one of these multiple systems of order: mathematics, harmonics, geometry, astronomy, logic, grammar and rhetoric.

Further, following the logic of this emanational evolution of universal phenomena, since it is governed by a perfect logical and mathematical order, the final results are considered to be similarly ordered as the principles that create that order. Hence, this leads to the premise that the financial markets are predictable, as are all things in such an ordered universe. All that is needed to read or decipher this order is an understanding of the logic of the symbolic ordering systems behind any element of that structure.

If this is accomplished, the "scientist" or better, the Natural Philosopher is capable of reading the universe like a book. In fact, in the Alchemical Tradition, of which Sir Isaac Newton was the most famous proponent, this process is called "Reading the Book of Nature". This language

of symbolic logic has been called "The Language of the Birds," a mythical, magical, perfect divine language, used to communicate the essence of universal phenomena to the Initiated, symbolized by the birds speaking into the ear of the Initiate. Understanding this, is it such a mystery that Newton considered his Alchemical studies to be of the greatest importance of all of his work?

**HOW TO TURN SMALL ACCOUNTS INTO
BIG PROFITS LIKE W. D. GANN...**

MARKET VIBRATIONS

**W.D. GANN'S HOW TO MAKE
PROFITS IN MODERN MARKETS
BY GORDON ROBERTS**

REPRODUCE GANN'S LEGENDARY RETURNS THROUGH LEVERAGED POSITION TRADING...

INTENT OF THIS COURSE

This course provide a trading strategy that allows for **large returns from low risk with an average risk:reward ratio of 1:10**, with returns of 500% per trade to some returns exceeding 5000%. The strategy employs powerful, straight forward analytical techniques explained in Gann's *How to Make Profits in Commodities* to identify high value trade setups which can be employed using highly leveraged options strategies to generate large but safe returns.

The analytical techniques and strategy **do not require any prior Gann knowledge** or any past trading experience. They can be easily applied by any trader, new or seasoned, to great effect with very little time or difficulty. The strategy is based upon **"leveraged position trading"** so requires little time or effort to manage. Minimum capital requirements are very low, so **someone with an account as small as a few \$1000 can effectively implement this strategy.**

WHAT YOU WILL LEARN

- Low risk, high reward trades averaging 1:10 risk:reward ratio!
- Trade setups with minimum 500% return & average 1000% return!
- **BIG** trade setups return 2000% – 5000% when they hit!
- Uses simple Gann-based analytical tools, easy to learn & apply!
- Strategy works with small trading accounts to make big gains!
- Uses classical Gann risk management and account management to produce the **BIG** returns like those Gann is famous for...
- A simple technique for beginners... a new strategy for seasoned traders!
- Online Forum for Q&A, and analysis!

FOR A DETAILED WRITE-UP, SAMPLE TRADES & AUTHOR INTRODUCTION & SAMPLE TEXT SEE:

GANN'S SYSTEM SCIENTIFICALLY EXPLAINED! THE LAW OF VIBRATION SERIES PATTERNS & NUMBERS

**EXPOSING THE UNDERLYING SECRETS
OF W.D. GANN & DR. BAUMRING
BY DR. LORRIE V. BENNETT**

**NUMBERS IS NOW AVAILABLE
750-PAGE PDF - PRINT ED. IN DEC!**

- [BOOK 1 - LOV BY THE PATTERNS](#)
- [BOOK 2 - LOV BY THE NUMBERS](#)
- [BOOK 3 - LOV BY THE PLANETS - 2021](#)
- [BOOK 4 - LOV BY THE GEOMETRY-23](#)

NEWEST BREAKTHROUGHS IN GANN

This book will provide the initial unveiling of the **13 Sacred Numbers**, revealed in the secret code hidden in **The Magic Word**, that are the basis for Gann's cycle system and the natural law/logic behind them. Also within the works is the Periodic Table of Numbers which helps to reveal the "hidden octave" of the square root of two as well as the measures of **PHI** and **PI** and their source calculations within the very Structure of Numbers

Timing Solution

Forecasts the Markets **Instantly!**

Timing Solution generates projection lines based on fixed cycles, astronomical cycles and other types of models.

The software considers models that deal with natural cycles, cycles that are based on celestial bodies' movement.

The program analyzes tens of thousands of different planetary lines.

The Universal Language of Events module allows you to create more advanced models analyzing everything that occurs in time and researching the effects of these phenomena on the stock market.

- ✧ You can ask the program to reveal the most powerful cycles for your financial instrument.
- ✧ Special algorithm that reveals the freshest/newly appeared/strongest cycles.
- ✧ The program analyses all turning points, provides their statistical analysis and displays the most probable support/resistance levels.
- ✧ Charting Tools, Fibonacci levels, Pitchforks, Gann Angles and many other traditional charting tools are available.

US Elections, ASH chart and the Jupiter Saturn Conjunction

By Dr. Lorrie Bennett

The biggest story in the US is the still unsettled 2020 Presidential election. In my prior article I discussed the lack of a clear winner with the expected disposition of the candidates President Trump and former Vice-President Biden. The events played out as expected. Time has moved past the voting of the Electoral College where the ASH chart suggested the outcome being favorable to Mr. Biden. The final date of Jan. 6 is fast approaching. How might the events turn out. First let us turn to the ASH system to see what forces are in play in Washington DC on that date.

There might be a bit of a surprise coming out of the meeting of Congress on Jan. 6, 2021 from the energy as it pertains to the two campaigns. First for Mr. Biden we see Mars/Saturn energy bringing a possibility of mourning and bereavement suggesting a death of some sort. I am unsure of if it will be of the candidate or of his opportunity to be President.

Venus is influencing the date which brings vanity and conceit, loss of others sympathy with Neptune and the node bringing in emotional suffering and the inability to realize one's own objectives with the help of others, the preference for life in seclusion and away from other people. The MH chart shows that female energy predominates suggesting that Ms. Harris might still be in play. This suggest that Biden will be out of play by 1/6/2021 or not in the final slate as President.

For President Trump there is just as much intensity with Saturn/Uranus on the Asc bring the energy of being placed in difficult circumstances, the fate of standing alone in the world, the suffering of difficulties caused by others and with the added energy of Mars/Pluto giving daring and temerity and the desire to face danger. Uranus/Jupiter on the ascendant gives the energy of teamwork and the Moon is influencing the date on the Ascendant which gives the personal relationship the people as a key energy.

This shows the continued dispute and suggest a possible resolution but one that has not occurred in an exceedingly long time. There is a possibility that there will be a split of the ticket between the parties with the House voting for Trump as President and the Senate voting for Harris as Vice-President as the most likely outcome from the reading of the ASH charts.

**Jupiter-Saturn
Event Chart (18)**
Dec 21 2020

Placidus
True Node

The unknown in the outcome is the Congress. The Leader of the Senate has put forth that the results of the election must stand and therefore shows little support for the Trump Pence ticket, while the House members suggest a willingness to fight. This interesting position and its challenge to Congress is suggested by the Jupiter/Saturn chart for the recent conjunction. Evaluating the conjunction for Washington DC shows the following charts, the natal and the geodetic.

Note that both charts are near exact suggesting that the energy playing out is going to be powerful. Using LJ Jensen's writings in his book, *Astro-Cycles*, we find that the energy of the conjunction is focused directly on the Presidency of the US in the 10th house of the chart. There is no guidance for the outcome in the US Senate nor the House of Representatives.

One should note that Mars is on the Ascendant suggesting it will be a fight. The Sun in the 9th house suggest the Supreme Court may eventually be involved in the solution but one could say they should have spoken up by January 6th, 2021. The ASH chart suggests a possible Divine Intervention and that would be anyone's guess as to from who, what, when where, or how it would come.

The above suggest the possible surprise. One must consider that as the House votes on the President then President Trump will be re-elected to that position due to the rules of the Constitution on that vote. The Senate is the wild card.

Know Thyself

by Joel Rensink

Twelve years ago I wrote a short article for my email list of 360 determined traders.

Due to current events, and the subject material being timeless in nature; I thought it appropriate to share with Traders World readers. It isn't modified except for the odd notation and an attached silver chart.

Joel Rensink

January 2008 – (IFCN)

Gnothi Seauton

(know yourself)

Pythagoras

Dear Traders:

Last week some of the big news was that the actor, Heath Ledger died. I, for one, am sorry about his passing.

I appreciated his participation in making "The Knights Tale", a movie which like many great ones, is really not just about the story portrayed. *Id est*, that people can be more than their original circumstances and that greatness can come from anywhere.

In the trading world it means that individuals who come from seemingly humble circumstances can develop the abilities required for exceptional performance in one of the hardest competitions known to man, the markets. In a minute I'm going to share a story about a friend of mine who was one of these individuals.

Like jousting, trading requires focus, clear awareness of risk and the ability to manage it. Lack one of these things and you will be one of the trampled instead of one of the victors.

It probably is very obvious to you, just as it has been rammed down my throat daily for

decades; that trading is largely a mental game. I'm sure that's why so many people desire a strictly mechanical method to trade, so as to eliminate the conflict that occurs within when trading from ideas that come to you in the midst of market movements.

That's understandable. But far from optimal. Optimal trading comes with time and experience.

Methods which have mechanical origins and edges are great starting points because they can provide an index for what "should" be the result from acting a certain way. And if the mechanical filter (which is what all systems really are) is based on some money flow or behavioral phenomena, then not only should it give positive results mechanically, but its results likely can be improved with a correct understanding of the traded phenomena. And a good understanding of the human component.

A Cautionary tale:

---Success in trading, after all is said and done, is 90% mental---

A few years ago I had a successful trading friend (I'll call him Bob) who'd traded futures and currencies for 13 years.

Then he died in 2004. By self-inflicted wounds, directly connected to his trading.

Like many, he had some rough going in the first 3 years of trading when the learning curve is the most challenging.

After that, Bob made better than average returns most years, averaging 40% annually over the last five years that he traded. He was not some nut or crazy guy. Or particularly lucky. Most people, including his wife of 20 years; thought he was an intelligent and considerate guy. He was studious, didn't smoke, drank very little and treated everyone around him like a friend.

I thought he had it in him to be a world-beating trader, and I still believe it.

What happened?

I will tell you what I believe, after knowing him and talking to him weekly for the decade before his unfortunate end.

Ego killed him.

Without going into unnecessary details, he didn't do what I'm recommending in this article. He didn't get to know himself as it relates to trading.

In 500 BC, the Grecian sages already understood the simple secrets to an enjoyable and effective life. Summed up in the phrase: **"First of all, know thyself."** (*Gnothi Seauton*) When we know ourselves we can be free from fear and incorrect thinking, and consequently, free to understand the necessity to perform without ego.

Since the mid 90's, Bob had been waiting for a bull move in silver. He had studied silver's price movements over the decades and "knew" that a huge move was imminent.

He bought breakouts, got stopped out. He bought the next breakout, got stopped out. This action was repeated dozens of times. Bob always risked a reasonable amount each time.

-My observations, after the fact: *His trading in the other futures markets was, in effect, financing his obsessive trading in silver. The "silver trade", seemed to be the only thing that really mattered to him. Sure, he maintained a nice lifestyle and friends, but he had this obsession that he kept feeding, beyond all reason. The first thing he would say on the phone when I'd talk to him was, "did you see what silver did today?"*

*I don't think it was the financial payoff from the "silver trade" that enthralled him. I believe it was the story in that it validated him and his belief in what a new bull market in silver would mean in the big scheme of things. And his part in trading it from the beginning of the move became crucial to his Existence. Bob's identity became so intertwined with "the silver trade" that his current lack of trading success in silver meant, in his mind; that **HE** was no good.-*

Then, in May of 2002, he was **SURE** that the bottom of silver was now in. He got a breakout that he was sure was going to work. It went 30 cents in his direction over the next few weeks, and then the market failed again, dropping more than 90 cents. Silver stayed in a messy range for another year, with Bob entering two more times and getting stopped out. Every few days he would be calling up about some new silver news fundamental that might factor into the "silver trade".

Meanwhile, he would still be making money on bonds and wheat and the other markets that we both traded.

In July of 2003 he got a breakout to buy silver again. Again it went about 30 cents his way in the next month and then quickly dropped right back into the range, stopping him out again. In his weekly call he would complain about manipulation stopping the "real"

function of markets..., you've probably heard this kind of talk before, and so had I. But, hey, everyone has quirks and if it isn't hurting anything or anyone, variety is fine. I've heard much stranger talk from good traders.

Then, in November of 2003 something very different happened. Some very bearish news came out about silver and..., it didn't fall. In fact, it made new highs for the year. My core trading system was already long, and I bought some more on the new highs. Bob called, and I mentioned that silver was looking good. He said something like, "Yeah, its back up to where I bought it 2 months before it knocked me out the last time. I'm watching it closely. I'll buy it in a few days when it drops a little."

Silver didn't drop off any at all. In fact, it's only been higher since that last conversation.

I didn't hear from Bob the next week. Or the one after that. A few weeks later I called his number and got the answering machine. I figured I just missed him. A month later, I talked to his wife when I called and she said, "you just missed him, he took the day off from trading.

The next week, I found out he killed himself on the weekend.

He never did buy the silver after the last breakout. He missed the trade. By the time he died in March 2004, silver was a couple of dollars higher than the breakout area. **(Note: silver is now more than \$10 higher than the initial breakout. January 2008)**

Bob was right about silver. But wrong about himself.

The problem definitely wasn't losing money, his trading account was up 27% for the year. I'm certain Bob let the anxiety of missing **THE** move that he had anticipated for so long get to him. It plagued him so badly that he couldn't let it go, even though – on balance, he was a successful trader. The "silver trade" was more than a trade, it was his self-worth. *[note: and yet he wouldn't get in higher than the spot where he "missed" the ideal entry]*

This story may seem outrageous and one which just reveals that there are some strange people out there. **There ARE some strange people out there.** Maybe traders are some of them.

Trading doesn't cater to the normal.

Our mindset determines our success. All Bob had to do was buy the last breakout. I examined his records. He had bought a total of 77 silver breakouts in the previous 5 years. And lost on 72 of them.

What does this all mean? **It means what it means - to you.** This cautionary tale is useful so this kind of fixation never happens to you.

Many are not going to be successful in trading, or in life. Their mindset is not one that will permit it.

Why do "crack whores" or meth labs exist? Chain smokers or alcoholics? People who insist on getting married and divorced 3 times? An element of the population is focused on other priorities than financial survival or prudence.

It isn't necessary to eradicate all your bad habits to be able to trade well, but you have to KNOW how you respond to stimuli. So you can create a "work-around" if you have to.

To get a handle on the mental part of trading, take some time off from studying the markets and spend it studying human behavior. Take note how others handle good and bad results to their efforts. Also, take note of how YOU handle the good or bad results of your efforts, trading and otherwise.

When you take a trade you are guaranteed to get results. They just may not be the ones you'll like.

Watch YOUR behavior and how you react to gains or losses. Watch how you react when the trades you are in aren't going your way, yet are not forcing you to exit yet. Ultimately, your success in trading is dependent on your state of mind.

Read good books dealing with the psychology of trading. **Investor's Quotient** by Jake Bernstein is good.

Read **Extraordinary Popular Delusions and the Madness of Crowds** written by Charles Mackay in 1841. Check out **The True Believer** by Eric Hoffer. Also, **Zen in the Markets** by Edward Toppel. These are great books that deal with crowd behavior and help you be sure you're reacting and acting the way you need to.

Trading can be /should be simple, even obvious. And pretty well effortless.

An exercise:

Imagine a market that is in an uptrend. You can use whatever mechanical definition you wish.

If you continuously enter this uptrending market randomly once every week or month with a fixed risk amount on every entry, and don't exit unless you are stopped out or the trend changes-- you will be doing something that very few are willing to do. This situation is one where you have limited, defined risk – yet UNLIMITED potential if the market doesn't stop out all of your trades. If you only exit when your definition of trend no longer applies, the odds increase - overall - that you'll be hugely profitable the longer you follow this process.

Consequences of this plan? At worst, you will lose a little. At best, you will gain exponentially.

Feel free to test this idea. See how durable the concept is.

The currency markets right now are such a market. For years the dollar has been inflated away on purpose by professionals who will keep it up until they achieve their objectives.

This isn't exactly news. This situation didn't develop overnight, and just about everyone who cares is aware of it. But what are they doing to profit from it, if at all?

Buying the Eud/Usd or Gbp/Usd is money in the bank. Until the long term trend is over. Then why isn't everyone doing this? For the majority of those affected, their mindset is not one that will permit taking the risk for an uncertain gain. [Note: Eur/Usd topped 3 months after this was written...]

It's like real estate. In America there is still a large percentage of citizens who rent instead of buy. Even though they know that in the long term, owning real estate is the

prudent and financially optimal choice-- they rent. And, if asked, will have lots of reasons for their choice.

Some of the richest families on the planet just followed the simple rule of ONLY buying real estate and NEVER selling. These families have land and properties spanning the earth, with prime properties in all of the major cities. It took them generations to accomplish it. You can find them listed in the Forbes 500. All from following a simple rule, which very few are willing, or able, with their mindset--to follow. You and your family could ultimately profit the same way, but you'd actually have to start doing it, as a family.

Not too likely is it?

My recommendation to you is this.

Think like the few. Act like the few. Execute like the few.

The **few** who have fundamental principles on their side, and use systems which profit from the oldest forms of human behavior. Like, fear of discomfort and loss or shame.

I keep pertinent quotes which remind me of the mental struggle of trading. Here is one I especially like:

"Genius? Nothing! Sticking to it is the genius! ... I've failed my way to success."
--Thomas Edison

Treat your mind like it is the only one you have.

That's enough for this month.

I wish you nothing but success. Stay long some silver and gold. For the next few years, inflation is the "new" constant.

Joel Rensink

Infiniteyield Forex Challenge Newsletter

Addendum from December, 2020 (the year the world went stupid):

It is a good time to reflect on why America has done so well relative to all other comparable

countries over the last 240 years. Without getting verbose – it's because of our Constitutional Republic. The freedoms it guarantees makes it possible for people to get at work creating something greater than themselves – without having to be constantly be surrounded by armed buddies protecting you from harm.

Traders are particularly at risk from the current events we're experiencing. If the USA is allowed to devolve into a country where elections are not secure, than nothing can be counted on being secure any longer. Like "free markets". Protect your mind and your families and your good friends. And your assets.

We may end up finding out why the framers of our constitution insisted on having the 2nd Amendment to guarantee our form of government.

2021 The Year Ahead

By Andrew Pancholi

www.markettimingreport.com

In the wake of the 2020 Global Pandemic, which also saw a financial collapse earlier in 2020, we head into 2021.

This brings a new set of cycles together with different challenges and opportunities. 2020 saw the culmination of the 90 year cycle from the 1929 crash.

It also saw 100 year cycles coming together from the last 4 centuries. These have all been associated with global pandemics. Most of you are familiar with the 1918 Spanish flu outbreak. Few of you are likely to be aware of the previous cholera and smallpox outbreaks at hundred year intervals. Our followers had been forewarned about these cycles coming together.

At the same time as this was taking Place, China saw political cycles from 30, 60 and 90 years all come together. There was also an 82 year revolutionary cycle from the Long March. It was no wonder then that China would be in the global spotlight.

The United States of America is in a death and rebirth cycle of just less than 250 years and this will come to a peak towards the end of 2023 and into 2024.

These same cycles coincide with a series of revolutionary cycles that have impacted the world. Donald Trump's presidency and Brexit are all part of this pattern. The previous cycle back saw the rise of Hitler in Germany and the cycle before that saw Karl Marx and Frederick Engels publish the Communist manifesto in 1848. This led to revolution across Europe. Head back one further cycle and we see the beginning of the American Revolution in the 1760s.

Markets, politics and history all move in the same cycles and with a degree of understanding we are able to forecast what lies ahead.

The 2021 Year Ahead Edition of The Market Timing Report has just been published.

It tells you what to expect in the stock markets for 2021.

AND you will also know...

Why we are greater risk from global conflict in 2021.

Which arena is potentially going to see a significant financial crisis and why.

This is going to be big one based on the number of cycles coming together.

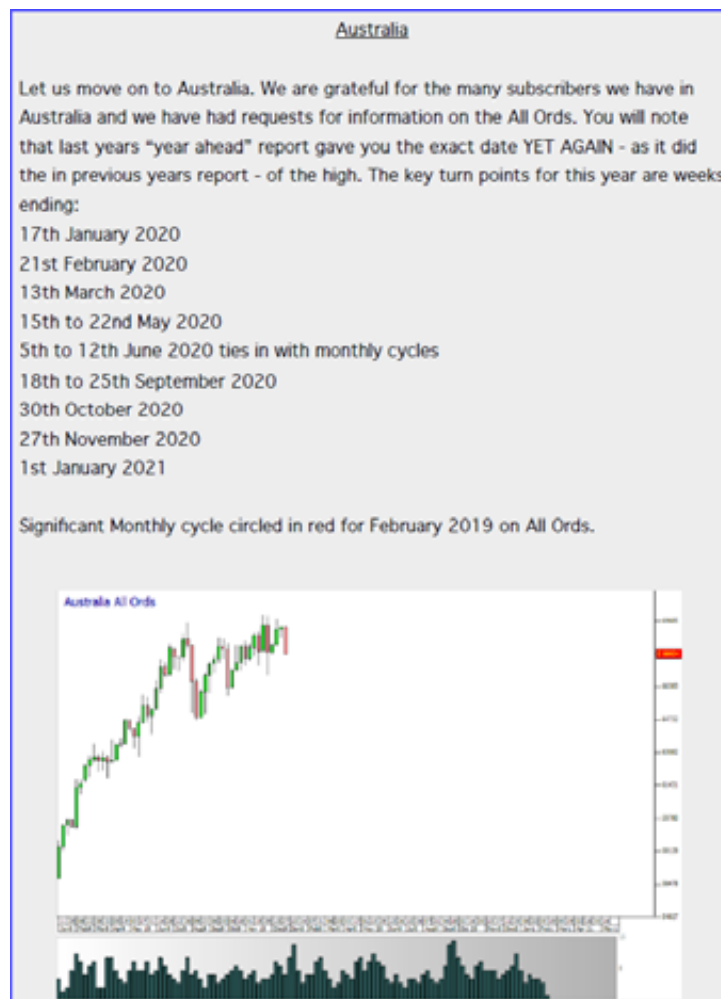

What happens next in America.

Which political party is about to implode and why and when?

We dive into our proprietary Crisis Matrix which shows us what to expect.

You will also receive the key turning points for the entire year ahead on the Australian AORD Index.

The 2020 Market Timing Report Year Ahead Edition came out on 5th Jan 2020 and these are the dates we published.

And this is what happened based on our proprietary histogram system.
Is there any other organization that can give you the major turns a year in advance?

The MTR does.

2020 Year Ahead followers were also forewarned and prepared for the following:-

An escalation in tensions between America and Iran.

For the forthcoming oil crisis - this was based on the 45 year cycle from the Middle East OPEC Crisis.

A major top coming in on the equity markets. This was based on the 90 year cycle from the 1929 Wall Street Crash and the 180 Cycle from the 1837-1842 Panic.

The February Edition of the MTR gave readers the exact date of the high on the S&P500.

How the November 2020 US Election would be one of the most contentious ever.

This forecast was based on the 144 Year Cycle. The roadmap for the electoral challenges from 1876 is very similar.

This culminated in the election of Rutherford B Hayes, he became known as RutherFRAUD. Key issues in 1876 related to immigration and China.

Of changes in the acceptance of Israel amongst countries in the region. Over the last few months, Israelis have begun to visit the UAE including Dubai. This was based on the 72 year cycle.

Forewarned about tensions with India around the Kashmir area. China and India have been at a standoff in Ladakh.

Forewarned about a rise in challenges with China, both globally and with Hong Kong. This was based on the 30, 60 and 90 year cycle coming in together with the 82-84 year revolutionary cycle.

Earlier Market Timing Reports forewarned of a huge pandemic based on the 100, 200, 300, 400 year cycles which saw millions of people die from Spanish Flu, Cholera and Smallpox. The pandemic cycle is as regular as clockwork. Major outbreaks also take place at the intervening 50 year intervals.

Were forewarned and fully prepared for the bubble that would take place in Bitcoin. At the time of writing in January 2020, Bitcoin was trading at \$7700. It has since traded over \$40,000. Readers were lucky enough to take advantage of this dramatic move.

This was based on the 300 Year Cycle from South Sea Bubble and the Mississippi land crisis that both took place in 1720. These were historically massive bubbles.

During the course of the year, reports forewarned followers of numerous events including the forthcoming massive Civil Unrest in America and the outbreak of the Modern Day American Revolution.

Come and join the many that have profited from the foresight of the Market Timing Report! Andrew Pancholi's predictive work has been globally recognized and he sits on Board of the Foundation for the Study of Cycles.

Following many requests we are now including our proprietary histograms.

If you would like to buy this one off edition of The Market Timing Report Year Ahead Edition together with the January 2021 MTR for just \$97, click here.

How the Financial Stress Index predicted turning points in 2020 with pre-pandemic data

by Lars von Thienen

Understanding the sentiment cycles in financial stress is critical to generating returns in the current market environment. Sentiment cycles influence the movement of financial markets and are directly related to people's moods. Getting a handle on sentiment cycles in the market would substantially improve one's trading ability.

This article underpins the power and importance of sentiment cycles. I want to highlight the importance of detecting cycles in sentiment to spot turning points in financial data. The following case study exemplifies the importance of sentiment cycles and the predictive power of Cycle Analysis.

Typically, one dominant cycle will remain active for a longer period and vary around the core parameters compared to other cycles. As real cyclic motions are not perfectly even, the period varies slightly from one cycle to the next because of changing physical environmental factors. This dynamic behavior is valid for financial market cycles as well.

The St. Louis Fed Financial Stress Index ([STLFSI2](#)) is a vehicle that can be used to analyze sentiment data. It is created using principal component analysis, a statistical method for extracting the factors responsible for the correlation of a set of variables. Financial stress has been identified as the chief factor influencing the co-movement of its designated market variables; extracting this factor allows St. Louis Fed to create an interpretable index. The index is constructed using weekly data series for a variety of interest rate, credit spread, and volatility measures. We have often referred to measure cycles on this dataset to predict important market turns in past articles.

We can apply our cycle analysis tools to this dataset and see if we would have been able to detect important dominant cycles that forecast financial stress extremes for 2020. The dataset is available in our Cycle Scanner and can be loaded with our wrapper around the FRED data source with just one click in the Cycle Tools.

There is a reason why we go back to 2019 and analyze the sentiment cycles for 2020: In December 2019, there were no COVID breakouts in the Western world. So, we analyze the predicted stress cycles for 2020 before the pandemic period, which started in February 2020. Was it possible to recognize the expected "stress" for the financial markets in 2020 already at

the end of 2019 based on pre-COVID market data?

This exercise was performed on 6. December 2019 with the Cycle Analysis Toolbox. Just using standard settings without any customization. This tool can automatically detect the current active dominant cycle and track the current phasing to forecast the next expected turn. The approach is described in the following publicly available online article (docs.cycle.tools). The used in-sample period includes weekly data from September 2004 up to December 2019. The standard cycle analysis based on the cycle spectrum gave us the following list of detected cycles on December 6th as seen in Table 1.

Plot	Len	Amp	Strg ↓	Bart
<input checked="" type="checkbox"/>	31	5.53	3.03	78.43
<input type="checkbox"/>	21	3.68	2.98	49.52
<input type="checkbox"/>	17	2.68	2.68	92.67
<input type="checkbox"/>	52	7.51	2.45	66.68
<input type="checkbox"/>	41	5.76	2.39	11.18
<input type="checkbox"/>	38	5.31	2.38	28.70

Table 1: Detected cycles in the financial stress index on 6th December

The detected cycles are sorted by their "Cycle Strength" in descending order. That is, the cycles with the greatest impact on the change in market sentiment per week are at the top. More information about "Cycle Strength" can be found at this [online article](#).

For the stake of simplicity, we select the active cycle listed at position 1 with the length of 31 calendar weeks to predict the expected sentiments extremes in the future. This cycle is plotted as an overlay on the sentiment data and continued for the full year of 2020. The expected turning points in 2020 have been highlighted.

Chart 1: St. Louis Fed Financial Stress Index and dominant cycle forecast for 2020 (6 Dec 2019)
 The cycle scanner detected an active “financial stress” cycle with a length of 31 weeks that tracked the latest major market movements in the past. This is shown in the left section of the chart where the cycle analysis on the FRED data took place. The source data was accessed via FRED API through the symbol ID STLFSI2-W:FDS and was analyzed with the standard Cycle Scanner in the WhenToTrade platform. The fuchsia-colored cycle overlay shows the automatically detected dominant cycle; the major turns are indicated with red and green time markers to show the anticipated turning points in 2020.

Sentiment cycles such as the “stress” index analyze the uncertainty of market participants, also often referred to as the “fear index”. High points therefore indicate a very high level of “fear” among market participants. In markets, a market low usually forms at points of highest uncertainty.

Therefore, for the analysis of sentiment data, it should be noted that these cycles are inversely proportional in the market index. Sentiment cycle lows correlate with market tops. While sentiment cycle highs correlate with market bottoms.

As can be seen, the static sentiment stress forecast for 2020 indicated the following turning points based on the major active dominant financial stress index at the end of 2019:

Market top: Nov/Dec 2019
 Market bottom: March 2020
 Market top: July 2020
 Market bottom: October 2020

As mentioned, this cycle analysis was done pre-COVID without any indication on the upcoming pandemic and negative business outlook. Now, let's see how this sentiment cycle played out in the following year 2020, shown in Chart 2:

Chart 2: S&P500 overlaid with forecast sentiment stress cycle turning points from December 2019

The time markers on the chart have just been pulled forward from the financial stress index cycle analysis from December 2019. So, these predicted turn-dates have been “pinned” there one year in advance – pre-pandemic.

As the analysis was done in December 2019, the market top, or financial stress low, was predicted. So any investor would have been cautioned in the final market exhaustion during December and January 2020. You would have added close stops to running longs or would have closed any long position based on the sentiment prediction at the end of 2019. Then, the market bottom, which was predicted for March 2020, was nailed on the point based on the financial stress cycle. The upswing into the summer was predicted. Just the predicted down-turn during July to October 2020 manifested into a sideways move in the market index. However, from cycle analysis, in a strong uptrend, a cycle downtrend is inline with a sideways moving market. Please review the cycle swings and market behavior on your own. For sure, a weekly forecast can not be used for entry and exit management. But it acted as a near perfect guide for the full year of 2020.

Moreover, it may explain why markets are reacting very independently of the COVID crisis. And it shows the enormous importance for the analysis of sentiment cycles. Indeed, what we see in the market index is only the result of the underlying cycles. So if we can find suitable data series that are useful for measuring market sentiment, the cycle analyst will be rewarded.

As is often discussed in our articles, one should always crosscheck for other dominant cycles, especially in other timeframes/vehicles. Another sentiment vehicle that is commonly referred to is the Volatility Index (VIX)—often called the “fear” index. A dominant cycle analysis on the VIX showed another sentiment extreme on the daily timeframe. Analysis was also done in December 2019 to cross-validate the weekly stress cycle on another dataset and another timeframe. The daily composite cycle, which was automatically detected with a length of 185 and 107 bars, projected a daily sentiment “fear” low for December 2019 (market top) and the next fear low for mid-March 2020 (market low):

Chart 3: Dominant sentiment cycles with length of 185 and 107 days in the VIX index, December 2019

The reader might ask: "Why are the cycles with a length of 185 and 107 picked for this analysis? Won't you always find some cycles which have worked after the fact?" The answer is quite simple, the cycles have been picked without any subjective filtering after the fact: These two cycles are the clearly visible peaks in the spectrum plot in December 2019 as shown in Chart 4. It is a standard procedure, which is explained in every spectrum analysis book: One selects the cycles with the strongest swing in the spectrum.

Chart 4: Spectrum plot for the VIX cycles in December 2019, showing the key cycles 185 and 107

The interesting point is that we have two different dominant sentiment cycles from different datasets and different timeframes coming into alignment, and both dominant cycles project a current market high around December 2019 with the next major low to occur mid-March 2020. We all know how the story played out.

As a cycle analyst which observes the markets for over 20 years based on cycle analysis, I can just emphasize that these pictures repeat again and again. For users of the WhenToTrade Cycle Toolbox, you can load the cycle analysis workbook at the following links and review the analysis on your own. You can check these examples on our cycle analyzer with the 7-day free trial, without any obligation.

TIME to reset

Rick Versteeg

Using our DeLorean indicator, we forecasted since beginning 2020 that Trump would win Presidential elections and that a crisis would unfold after November 3rd. Well, it was correct, Trump had a landslide win in the morning of the 4th, but suddenly counting was stopped in 7 states and magically they kept on finding many votes for Biden and few for Trump, which took ages, but in the end Biden was ahead. However, he won only 16% of all counties and 80 million votes, much, much more than Obama. When writing this article there is tons of evidence of massive fraud and still it could well be the case that Biden will win. Because democrat states do not want to investigate the ballots in full and judges as well as supreme court deny mostly the evidence and fraud. Did you not know about the fraud? No surprise since Big media does not cover anything about fraud and evidence whatsoever. Nevertheless Trump can become the next president, since on January 6th our indicator is deep RED, right on time with the day that Congress will convene about choosing the president. Let's see how this will play out.

How does our model researches the future?

Firstly we calculate the energy of our time patterns at work for history and future. Next we research *which* time patterns in history had *what* effect on markets, economy or society. History repeats itself in the future, doesn't it? We maintain a pure quantitative approach meaning that we use price data, which is an excellent, undisputed measurement of value (and direction of markets) as well as using a fully quantitative Time database. These two databases combined are used to *research history to map the future*.

First work was to study and program chart *price patterns* and fractals in software ELWAVE (I was the expert and original owner) that still sells worldwide.

Next we devised an undisputed quantitative measurement/model for direction in markets or society using "time energy". Energy should be thought of as physics formula, Einstein related definitions of energy, which are fractals as well.

Undisputed means it is a *pure quantitative approach* and its outcome is mathematical and does not change because of any interpretation. Also calculating the *time patterns* is **fully independent** from the price database.

Firstly longer term TIME patterns have been defined and researched how they correlated with the price data.

Empirically we determined what effect the TIME patterns have on the markets.

The large time patterns should be thought of as blue print, the way it looks and travels in time during a period from 2 to 8 years.

For example "3 waves up" in the large time pattern shows **bull markets everywhere in history and the future**.

The Signature of 3 TOPS and 5 time waves (3 up and 2 down), is a relatively simple and very effective pattern.

Therefore they did show up and keep showing up in the future as well, which in the meantime has become history.

Obviously during time periods with "3 waves up" society experienced on average prosperity and harmony (our very first baffling discovery).

3 examples of recent **3 waves time patterns** in the 1980s and 90s. Imagine knowing in 1982 that these bull market patterns were coming up and would continue after the crash in 1987? Living in 2020, when will these bull time waves come again?

NOW you need to know when these bull market patterns will show up again! Bull or Bear in 2021?

Contrarily, "2 or 3 waves down" shows a decline or worse in the markets and smaller crisis in society, which on average will be visible in a 2 to 3 year period. Smaller time patterns in specific sequences do build larger patterns and have a larger range of sometimes 5-8 years instead of 1-2 years for the smaller time patterns.

The time patterns of the past have been extensively researched and correlated with all history available for which our time database, which starts from 1600, provides calculations, which are shown as time pattern

History repeats itself

Every period that has the same comparable Time patterns, witnesses more or less the same parallel events and is a parallel universe translated to modern times. Yes history repeats itself in the future.

Large DeLorean time patterns at work until 2021

We have *Revolution time patterns* with historically big impact or we have minor crises or bull markets. Depending on the outcome of time patterns, you will know how to prepare. Is it a bull market, you cannot imagine this to happen in the middle of a crisis. Now on an all-time high, you cannot imagine a bear market to develop. Our analysis will help you to believe what is coming. Our outlook may be unthinkable and farfetched, but we assure you it is not. However, not necessarily the worst case will happen.

JUST TRY Outlook 2021 now, special offer!
use coupon TWissue79

The most decisive years are ahead, be prepared:

- Society
- Economy
- Financial markets, Dow Jones

The TIME pattern that is at work NOW is a **WAR pattern** as we said before. Even a lot more information is available, which you can read in our DeLorean OUTLOOK 2021. Is it worse like a revolutionary pattern or will the constitutional crisis be over real soon? There is a worst outcome, where a **coup** takes place and/or a **new ideology** (tries) to take over. If the power shifts, normally a period of freedom stops. If it succeeds it will take many years to turn it back. Alternatively it is a war pattern that highly correlates with civil war or World war II. If you order the DeLorean outlook 2021, we will tell you more.

Large DeLorean 2021 time patterns that could rule for around 2 to 5 years give you an image of what to expect. For example if you see a forest or a river, you know it's meaning (health, direction) without the necessity to inspect every tree or turn in the river. The same goes for DeLorean pattern charts, you look at the picture to see how healthy it is, but not every up and down move in the patterns is a high or low in the market. It is a general trend mostly of society and humans. **DeLorean indicator gives detail for more precise market predictions, while Long term time patterns show trends in economy and society.** Putting this indicator and Long term patterns together, shows bull and bear market years before they happen. The larger pattern is more important and consists of multiple smaller patterns in an

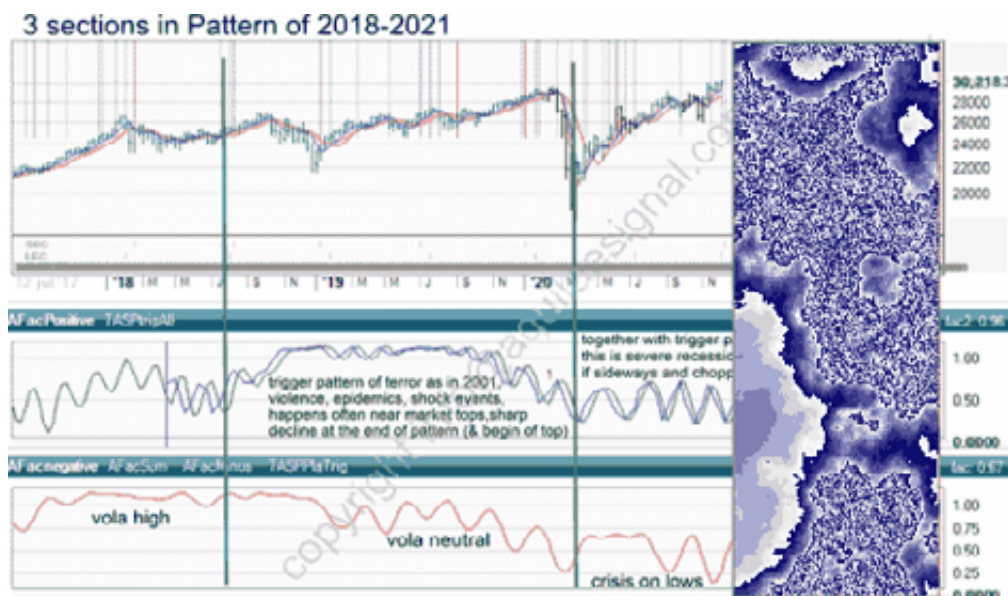

order which is different for every period. In this case the pattern starts at around mid *In Red IN THE CHART we have inserted assassinations of US presidents, which quite often is predicted by a smaller time pattern as a part of the War pattern. The question is to what patterns it relates in the past and if it is a mild war pattern or worse.*

2018 and will be shown until 2021, in our outlook 2021. Of course it does not finish there.

The most important thing is that the pattern 2018-2021 is a WAR pattern, see below, as already mentioned this year, starting later in 2020. Because it has and will have a big impact on society, economy and markets we already mentioned its effects in an early stage. This was possible because we already had the analysis prepared for the years to come.

The WAR pattern continues in the beginning of 2021 and coincided with the constitutional crisis and violence that we expected for 2020. In view of the Dow being at an all-time high and the severity of the looming crisis of which we only see the tip of the iceberg, we expect the Dow to enter a possibly big correction. How far it will go, we will assess later on when we compare it to historic times when lookalike patterns happened. If history repeats, chances are that markets will move in the same direction. One positive thing to mention is that governments or dictatorships normally take full control of society as well as economy. In these environments stock indices tend to be controlled as well and a sort of war economy and budget explosions take over. At first governments inject a lot of money to keep economy afloat, but later on it is reduced equally. Sounds familiar, right?

Consequently indices tend to decline around 25% or so in comparable periods. However if complete chaos breaks loose, it is another story.

Above the pattern from 2018 to end of 2021, 2021 is covered but revealed in our outlook. This can be divided in **3 sections of smaller time patterns**. But taken all together makes it (part of) bigger pattern. The 1st section is from half 2018 until March 2020. The 2nd section is until March 2012. The 3rd section is a smaller recovery or bottoming of economy, which forecasted a severe recession in 2020.

When studying the lookalike history, we found the answer how bad the war pattern could get. Will it be a worse PATTERN or not? That would signal to prepare for the worst case, which not necessary fully unfolds. But for now we tell you about the War pattern.

Every WAR is a sort of **invasion** of the enemy with fraud, violence, propaganda and a new **ideology** causing mass psychosis and hysteria. All translating in what could become a bad period. We mention **1860** the American Civil War, and **1938** as best correlations to nowadays. Please note that war patterns coincided with depression but also recovery in markets before the end of the war. DeLorean indicators help to determine WHEN and IF markets start to rise long before the end of the war.

Implications and parallels of Large time pattern-1938-1860

These patterns are highly correlated. Therefore we can expect parallel events happen now as happened in the past, Just to mention some important events. In this period there appeared more correlated patterns in a period of 2 decades. All these crises unfolded globally and during all of them first a grab for power then restrictions on freedom,

wars, starvation and depressed economies as well as centralized power, where the people suffered. Either starvation, depression or financial collapse are prevalent during hard times.

1860

- civil war between northern and southern states of the US
- several southern states seceded from the US
- war and revolution which did not succeed in the end
- new technology and next stage of industrial revolution
- new infrastructure, beginning of railroads
- native indian population defeated (by immigrants)
- martial law invoked by Lincoln, media companies closed, opposition imprisoned.
- first fraud with mail in ballots of soldiers, financial reset
- In Europe Prussia invasion united German states after several wars
- slaves were freed beginning with declaration of independence
- Lincoln assassinated
- hyperinflation, financial reset

Based on history we see coming a serious decline from the current all-time high of around 20%.

1938

- global war, nazi invasion in Europe, Japan invasion in Asia, Russia invasion in Europe
- nazi regime new ideology, ubermensch and against jews (immigrants)
- mass psychosis of the people by Hitler and the emperor of Japan
- dictatorship, brown shirts new troops of Hitler maintaining order
- war industrialization, new technology
- step by step taking power until democracy was gone
- propaganda reinvented, fraud, new media
- freedom restrictions, curfew, lockdown, critics imprisoned or killed
- concentration camps, millions of victims
- nations around did not see the danger of change in power
- financial reset, Bretton woods, currency reset

1938 chart see outlook 2021, forecast for 2021 is hidden. See how colored line correlates with current period, known before it happened.

Review 2020

The above chart refers to the Dow from 2018 until 2021, prognosis for the following year is covered. The chart line in black is the actual development of the Dow prices until the end of 2020. The colored line is the price chart of the pattern we expect to match best, which is superimposed on the current price history. The **black arrow** is the point where we are now, compared to history. As you can see until now prices are compatible (look at directions of markets), with some shifts left or right. The decline begin 2020 is on time as is the recovery. Only the recovery in 2020 stretches.

In our Outlook for 2020, made in December 2019, we foresaw the top of the market and a decline in Dow Jones of minimally 20%-30%, violence and terror spreading, severe recession in economy starting, Brexit happening, and a victory of Trump in the elections, as well as very chaotic period around these elections.

After the collapse and extreme volatility in markets in the 1st quarter of 2020, we expected the SPX to rise from around 2000 to 2900, but did not expect the SPX/Dow to reach new all-time highs. The reversals (red bars) later in 2020 did connect to special events (WTI oil at -\$40) and other smaller reversals. Last part of 2020 there were not

many reversals, but this will change in 2021. Please note that within a short period of many reversals the markets corrected swiftly and reversed sharply. All if it was based upon the first 2 sections or time patterns in the 2020 outlook.

When the virus hit beginning 2020, we dived into history to find correlations with the trigger pattern of terror (1st section of the Time pattern) in history. It revealed that some more patterns like 1918 (Spanish Flu) and 2001 (SARS) included epidemics. Also we recognized that during or after the trigger pattern alike 2018, it often happened that presidents of the US were assassinated (Lincoln, Garfield, McKinley, Kennedy, probably Harding) or attempts. This means it is still a danger now for a president.

The main result of this research of history, was that including the patterns after 2020 revealed a WAR time pattern. Later on we connected this to many major focal points in history.

Elections

All of DeLorean outlook 2020 came true, except, for now, the re-election of Trump and a market correction that still can take place. We do have a constitutional crisis but not yet translated to markets, which is odd.

The elections nor its outcome are certain yet. Although it gets less obvious that Trump will win, there are still some "Trump" cards to play, if you like it or not. Wisely Trading and investing is not about preferences, subjectivity or dislikes, but about information.

Looking at DeLorean indicator, which is used for timing the markets, we now – 24th of December- see already the red zone end of year 2020, potentially a sharp correction. In addition our indicator is deep RED on January 6th 2021, when senate elections are finished as well in Georgia and Congress has to convene about the presidential election.

Are you aware of the fact that 7 states, mostly Republican, have 2 slates of electors, one for Biden and one for Trump? When the indicator is red there is a crisis and the establishment normally doesn't like it.

So we are giving away our indicator before it happens, January 6, 7 and 20th are Red and the red bars are Reversals. Let's see what happens. And more to come in January and February. To see all just order DeLorean indicators.

Important

At some point the market, so far protected by media who protect the potentially false Biden election outcome, will recognize that there is still huge uncertainty about elections and a depression around the corner. Therefore high risk – correction- in the markets NOT MUCH TO GAIN, A LOT TO LOOSE. In addition, we mention there might be a much bigger picture still hiding in the background, a TIME reset which is not great and not to be liked.

2021 Grain Reports The Opportunity of A Generation

By Andrew Pancholi

The grains have seen significant bull moves in the last few weeks.

We are approaching super macro time cycles that will impact these complexes heavily.

These super macro cycles align with historic events such as *famines, crop shortages and currency moves*.

In fact the last few days have seen a significant weakening of the Dollar exactly as predicted in the December 2020 edition of [The Market Timing Report](#).

We are in turbulent economic times.

Our mission is to keep you ahead of the game - to give you a distinct advantage over everyone else.

2020 has been a challenging year for many - here we are seeing opportunities to thrive whilst others just survive.

With uncertainty in the USA and across the global stage, we are on the verge of seeing volatility across of range of commodity markets.

The grains are moving - are you ready to capitalize on what we believe to be the opportunity of a lifetime? Just like our followers did on the equity markets in 2020 - they were forewarned and forearmed. They knew the top was coming in February 2020.

Let's take a look and see what happened previously in our 2019 - 2020 Grain Reports

Taking the Soybean reports, these were the turning points that were forecast.

In the chart below, the master report identified, IN ADVANCE, the main monthly cycles shown by blue lines.

The weekly turns are shown by the arrows.
Daily turn points in the monthly updates are shown by the blue dots.

Looking at Oct 2019 see how we have a blue monthly cycle combining with a weekly turn point and also a daily cycle.

Looking at October 2019 see how we have a blue monthly cycle combining with a weekly turn point and also a daily cycle.

This created a very high probability set up. A major high came in. Circled in red.

Now look at July 2020 see how a blue monthly cycle combining with a weekly turn point and also a daily cycle. **This heralds a highly profitable move.**

The real focus is on timing the turns.

The chart above shows all the turning points we identified in advance.

Could this add value to your trading, investing or hedging system?

These turns are derived from our PFO - Profit Finding Oracle - indicators. This allows us to fine tune the turning points.

When the histograms spike, we can see the market has a high probability of changing trend.

Below is just one PFO histogram set that we use on soybeans.

See how the red arrows on the histogram peaks line up with turns in the market. Some future turns are shown.

We use different sets of these in different time frames to identify turning points down to within a day or two.

Putting all this all together really gives us an edge. Would this information be valuable to you?

Then we add our modelling.

We create a forecast curve.

This is shown in blue.

The subsequent actual market is shown in black.

Whilst the modelling is coarse by itself, it becomes extremely powerful when combined with our turning point histograms.

This phenomenally accurate timing system was **previously only made available to major banks, funds and institutions for five figures**. You can now access this for a fraction of the price.

There are some major moves and opportunities in the grains, the first of which is right now!

Following numerous requests from readers of The Market Timing Report we have decided to release them to our loyal subscribers.

Find out more here - see the forecasts and turn points on Soybeans.

You will also be able to watch a brief video on how to combine this information with successful trading systems.

<https://lp.markettimingreport.com/grain-reports-larry>

For a limited time period all three reports can be purchased for a special 50% discount.

Due to the nature of the information, all sales are final and no refunds are permitted.

This is a condition of sale.

The forthcoming commodity moves are going to provide us with opportunities the likes of which have not been seen for over a generation.

As legendary statesman Winston Churchill said

"The farther backward **you** can **look, the farther** forward **you** can see."

The Art of the Square

By Rob Giordano

According to WD Gann, number squares are very important in determining a market's swings. In the following charts I have highlighted in red arrows several different number squares starting from a few major tops and bottoms on NVDA's weekly chart. I have also included multiple Gann angles as well. As we see, each arrow points to a different weekly swing, however if you look close you can see several major swings are forecast using 2 or 3 different number squares lining up on the same time bar dates.

To make the point clear I deleted all Gann Angles. As you can see number squares are very important in forecasting. This chart started in June 2018 and runs out to 2023 with several squares coming in mid Jan 2021.

In the above chart we see multiple red arrows drawn from my software's "Time Plus" time count application, thus drawing arrows from many number squares such as 9, 16, 25, 36, 49, 64, 81, 100 and 121 going out into the future. Using this method we can get a feel of a markets important CIT points then combine them with other software applications for extra CIT confirmation.

Squaring of high and lows Price with time

Another way to look at squares is from Gann's famous squaring of high and lows with time. The following chart is one of several recently purchased through Lambert Gann's library of charts. I found this chart to be extremely interesting because Gann marks directly on the bottom of the chart the actual squares in time from the stock Dupont's weekly swing low of \$22.00.

(I received permission in advance from Cody Jones, owner of Lambert Gann Publishing to publish this chart within this article.)

This Dupont weekly chart is from October 1931 to September 1934. As we see in chart 1, Gann

added angles, time counts, volume and Squares in time throughout the chart. In chart 2 we see a major swing low of \$22 in July 1932 and he marked each 22 week period at the bottom of the chart. In chart #3 he counts out to 4 squares along with marking the 52nd and 90th week with an arrow.

Chart 1

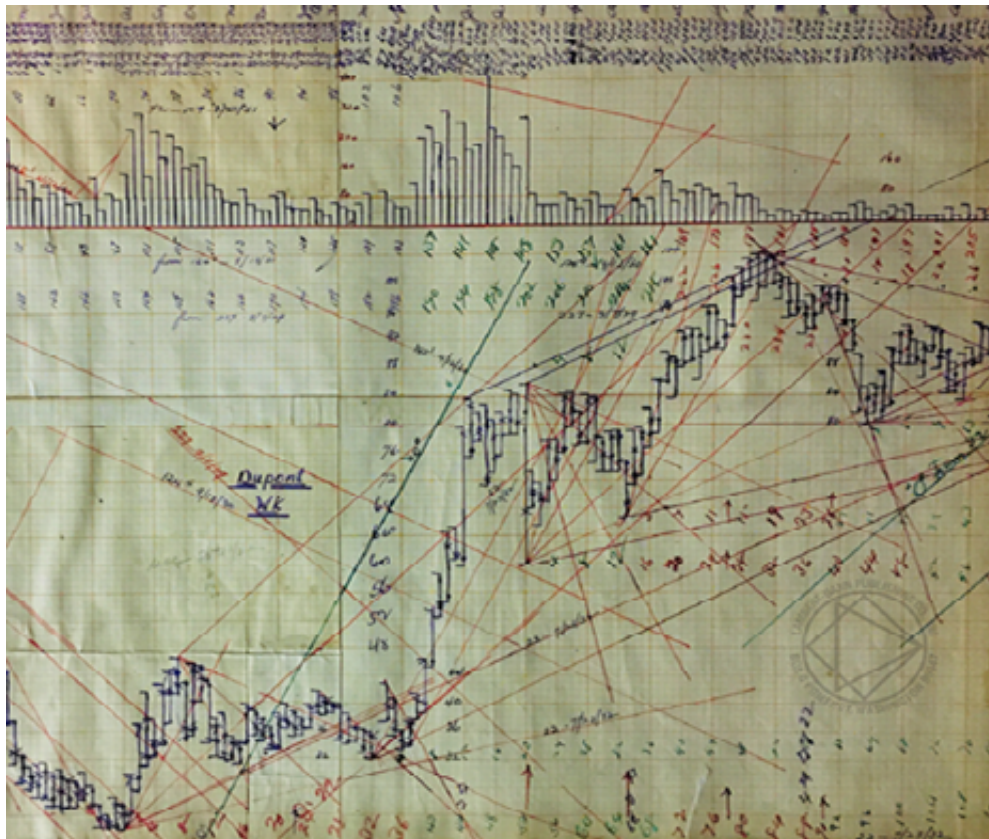

Chart 2

Chart 3

Using the same method on NVDA Weekly chart starting from a major swing low at \$20 in July 2015 and progress out 14 squares into the future we get;

Weekly chart with a few trend lines and degree angles

You can also use any of the other tops and bottoms and do the same, but since this stocks price is so high not many squares are reached.

Planet Price Lines

Another dimension to our timing calculation is to add Planet price lines to the chart. Once we find the proper planet holding price, we can see support and resistance based on this more esoteric cycle. In this case the red wavy lines is the planet price conversions of Geocentric Neptune on a square wheel of 24 (Square wheels are explained within book 2 of the "Combined View of the Masters" series). What we see when added is many major and medium swings tend to stop within 1-2 price grids of that planets line.

NVDA Weekly chart with Neptune planet price lines from square wheel of 24

Once we add the planet price to the chart, then re-add number squares from various tops and bottoms we can potentially make some very profitable trades.

In the next chart we can see when squares from tops and bottoms are drawn, and price is close to the planet line, we can take a trade with a stop loss order slightly above or under the planet price line (depending if line is support or resistance).

Once confirmation is witnessed by a move in the desired direction its important according to Gann, to use trailing stops to lock in either break-even or a small gain just in case it's only a short term move in the desired direction.

Planetary Fingerprint Application

Another Astrotechnical application exclusive to my Gann Grid Masters software is our Planetary fingerprint tool. Since Bayer, Gann and other master financial astrologers found each market be it a stock, commodity or index has its own unique astrological planet combinations controlling its time, I designed this application.

What this application does is scan every major chosen price swing date and dissect each, thus listing all planet combinations around each in sequential order. Once a list is calculated we then back test each combination one at a time then all at once using our secondary fingerprint application.

After finding the most predominant combinations we forward them into the future by highlighting directly to the chart in the color of the users choice.

In this next chart, I scanned many high and low dates on NVDA daily chart for 1 year and found the following predominant combinations, Sun/Mars, Mars/Neptune and Mercury/Neptune controlling its timing to a large extent.

Chart 1

The most important takeaway to the above chart # 1 is the TAN lines, as the TAN lines are dates several if not all 3 planet “Hot” combinations come together on the same day. This approach as you can see, forecast many CIT periods in NVDA’s past and will hopefully continue to do so well into its future.

However, the true magic to the software is when its users get to combine multiple applications to the chart at the same time. In the next chart, chart #2, Ive included our unique “Hot” astro dates with Neptune’s price channel cycle on a single chart.

Chart #2

Another unique feature of my software is the ability to change the grid size and price scale of our charts. The reason this is important for finding the proper price scale various draw tools and angles vibrate too. In this case, after testing many different price scales from multiple tops and bottoms and adding our Gann angles I found the best fit for NVDA daily chart to be \$2.03 per price grid, starting from June 2 2019 low at \$133.00. We see multiple angles crossed at important daily tops and bottoms which also line up with many "Hot" dates and Neptune's price cycle.

Chart #3

Now, think about this.... combine this information with our weekly number squares, Gann angles and time counts as shown in previous charts!

Lastly, understand our software users can combine these and many other technical and astro technical applications all of which can be found within my Gann Grid Master's tool library. Each tools application has also been introduced and explained within my 2 book "Combined View of the Masters" series.

Now, looking at the above charts, can you honestly TELL ME the masters weren't remarkably talented in their own way, and their astrological applications were nothing more then superstition, mumbo-jumbo and hog-wash?

I THINK NOT !

So with this being said; if you feel you can benefit from my "Gann Grid Masters" software, my "Combined View of the Masters" 2 volume series or private 1 on 1 training, please go to the following website, links and videos for more information.

Thank You

Day Trading Challenges and Solutions

By Thomas Barmann of NeverLossTrading

Summary: Even on a 50:50 chance, retail traders struggle to produce longer-term income from trading or investing. We share why and how to make a change.

1. Introduction

What do you think is the average win rate of retail traders?

US regulations do not require brokers to publish the win or loss rate of retail traders. We are an algorithmic trading house and such, decide on numbers and quantifiable instances rather than assumptions. To come to a quantifiable answer to this question, we made a little excursion:

European brokerages that offer leveraged products like CFDs need to report their clients' success rate. A contract for differences (CFD) is a financial contract that pays the differences in the settlement price between the open and closing trades. CFDs exist for indexes, commodities, currencies, ETFs, stocks, and more. They essentially allow investors to trade the direction of securities over a chosen period, often short-term (day trading). CFDs are cash-settled and allow ample margin trading so that investors only need to put up a small amount of the contract's notional payoff.

In essence, on CFDs, you either bet up or down. This far, CFD trading is not allowed for US traders, and we are not here to propagate it, but it gives us the basis to judge the average win rate of US retail traders.

Comparing directional trading to a coin toss, we could estimate the average success rate would be around 50%.

In reality, though, the success numbers average is about 24%, or 76% of the private investors lose money trading.

Ensuring that we are not talking about a single instance, we ran an analysis for the top-10 CFD brokers that operate in multiple countries and report a substantial client base of traders: IG, for example, was founded in 1974 and reported 273,000 clients in 2020.

Clients Success Rate with CFD Brokers

CFD Broker	Clients Performance	
	Winner*	Loser*
Plus500	24%	76%
etoro	25%	75%
EuropeFX	21%	79%
XTB	18%	82%
IG	24%	76%
finanzen.net	22%	78%
Admiral Markets	21%	79%
markets.com	21%	79%
flatEX	27%	73%
FXflat	22%	78%
LYNX	34%	66%
Average	24%	76%

*win/loss rates published on the website of the CFD-providers

Some of these brokers, like "etoro," offer copy trading. A client can follow traders' highly successful moves, and still, 75% of the "etoro" clients lose money. Obviously, an exact copy of successful traders' actions does not work: You see the stats and picks of successful traders but not their decision-making basis. In consequence: replicating statistical success appears to be a challenge.

Who had assumed such a high rate of losing traders?

Why should the US futures stats or speculative directional option/stock trading statistics be different?

We say that they are not:

With a robust ASSUMPTION, about **75% or two-thirds of the US traders lose money**, particularly day traders.

What are the reasons for this, and how can you change to this?

As you can imagine, there is no single and straightforward answer; however, success has a structure. We went to dissect the critical elements of trading and investing success to add them to your knowledge and skillset.

2. Trade For Pre-Defined Price Moves with Signals

The first struggle day traders face is trading for too small price moves.

Aside from commission, there is a bid/ask spread to consider in your trading, and if you trade for small increments, the odds for making money will stack up against you.

The table's left side shows the expected result when trading for \$50 price moves and the right side for \$200.

Value Change /ES	\$50	Share	Value Change /ES	\$200	Share
Risk	\$ 50.0		Risk	\$ 200.0	
Bid/Ask Spread	\$ 12.5		Bid/Ask Spread	\$ 12.5	
Commission	\$ 4.0		Commission	\$ 4.0	
Slippage + Commission	\$ 16.5	33.0%	Slippage + Commission	\$ 16.5	8.3%
PNL	\$50		PNL	\$200	
Wining	\$ 33.5		Wining	\$ 183.5	
Losing	\$ 66.5		Losing	\$ 216.5	
55%	-\$ 11.50		55%	-\$ 18.15	
65%	-\$ 1.50		65%	\$ 152.52	

The table shows that traders, aiming for a \$50 price move, representing a price change of one point of the /ES (E-Mini S&P 500 futures contract), regardless of operating with a 55% or 65% system, will not make money long-term. When aiming for a \$200 price change, traders with a 65% system aim for a solid return; those with a 55% system are still losing money.

We can already spell two critical success factors:

- A) When trading Futures or FOREX, trade for a minimum value change of \$200 to keep commission and slippage below 10% of the price change you trade for. When day trading stocks, focus on price moves $>0.5\%$ of the share value and trade for a price change > 99 cents.
- B) Operate with a system that gives you a 65% or higher probability of winning. With a lower probability system, success will be random.

Trading is a numbers game, and those who understand the critical actions to take are up for making money, those that are not willing to change, remain in the 76% of the traders who donate their money.

By our human nature, if we once commit to a particular behavior or systematic, we like to hold on to it (check on the term: cognitive dissonances). Behavior-change is hard for us. Some of our long-term traders joke that it needs somebody to take the other side of our trades; however, we preferably want an institution to render the money to you by following better principles.

But how do you solve this?

Let your system tell you the price-speed for every instrument and time frame you choose, and then compare if it is above or below the shared \$200 threshold.

To get to the price speed, let us share some of the fundamental principles:

The financial market action is complex and CANNOT be described by discrete mathematical functions; however, it can be detected by mathematical functions:

There are multiple layers of financial measures and transactions. Instead of relating past data, we are looking at the action of now and portrait specific changes in price/time-unit, volatility/time-unit and volume/time-unit to catch, similar to seismic waves:

- A pre-stage of a potential directional price move
- The initiation stage of a potential directional price move
- A continuation stage of a potential price move
- The exhaustion stage of a potential price move

A trade will only be entered when the entry signal and the expected price move to trade for are in a meaningful balance of $\text{Risk} \leq 1.2 * \text{Reward}$ (we demonstrate a little later in this publication why this is essential).

The system shall spell out the price thresholds: Buy $>$ or Sell $<$.

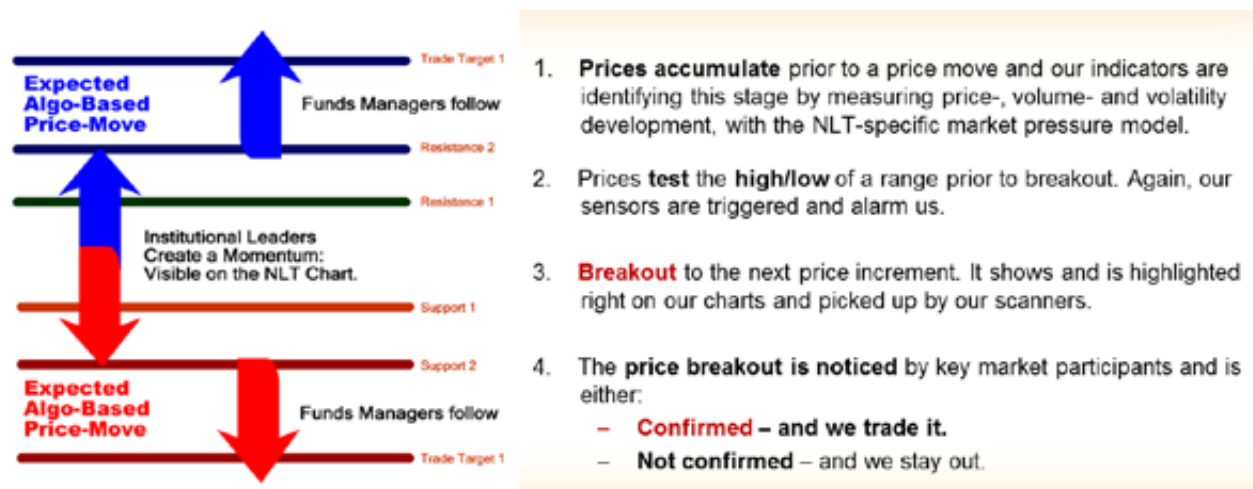

In such an environment, you are not guessing; you act on clearly defined rules and changing your trading.

Detecting and Projecting Directional Price Action

By our guides, we only trade if other market participants invest or sell the same asset following this model, allowing us to operate with buy-stop and sell-stop orders.

NeverLossTrading Price Move Model

We also understand that key asset holders will have a strong need to re-balance their inventories. Thus, at a certain price-expansion, they will either float- or shorten supply, which will result in an opposite directional price move that will then take away from our profits. Knowing this, we pre-calculate how far the expected price move shall reach, and we take profit before we assume it will retrace or reverse.

Our tool to calculate the expected price move is the **SPU = Speed Unit**

NLT **SPU** = Price Move/Time Unit (Price Speed)

A dynamic measure: Constantly Adjusts to the Actual

SPU-Trade-Target:

Minimum expected price move after an institutional engagement is established.

What is your take away:

- Let your system define the SPU (Speed Unit), indicating how far a price move shall reach until it comes to an end and in particular: do not trade for very small increments.
- Operate with conditional buy-stop and sell-stop orders, ensuring that other market participants have the same directional assumption that your system spells out.
- Act on system-defined high probability price turning points only, applying mechanical rules rather than leaving room for interpretation.

How can this be expressed on a chart?

NLT Top-Line Chart for /ES (E-Mini S&P 500 Futures Contract), 19. Nov. 2020

On the top left, you see the spelled out SPU: \$2.3 (at the last candle on the chart), representing a price change of \$112.50, and such it is below the minimum price change to trade for $\geq \$200$. However, the SPU measure changes bar-by-bar, and we analyze the three trade situations as follows:

NLT Top-Line Trade Rules

Entry Rule	Signal	Trade Target and Stop	Result base on one contract
Situation-1 Buy > \$3,560.3	Blue NLT Power Tower Buy Signal	Target: \$3567 (max. 10-Candles): Stop: \$3,554 \$300 Risk	Favorable Reward/Risk setup. High probability signal (70%): <ul style="list-style-type: none"> • \$337.50 return • \$300 risk • 6 candles to target
Situation-2 Sell < \$3,560	Red NLT Power Tower Sell Signal	On the first reversal, we only trade to the first target point, and such reward/risk was not acceptable	Unfavorable Reward/Risk No trade
Situation-3 Sell < \$3,562.1	Orange NLT Early Down Signal	Target: \$3,558 (max. 10-Candles): \$200 Profit Stop: \$3,563.50 \$75 Risk	Favorable Reward/Risk setup. High probability signal (65%): <ul style="list-style-type: none"> • High return/risk • Confirmed signal

In the above example, we demonstrate how we measure and trade for a pre-defined price change in distance and time:

SPU Price Move and Time

Trades will be closed either at the pre-defined SPU-move or after the maximum number of candles in the trade: A two-dimensional positive exit strategy.

By the SPU-measure, you define the price change you trade for, and you only act on the acceptable reward to risk setups. In cases like situation-2, where the reward/risk setups are not adequate, pass on the trade:

A big takeaway for retail traders:

You are not in the business of trading; you are in the business of making money by investing at favorable setups.

Many retail traders that come to trading with a solid work attitude overtrade. The work in trading has to be put in the preparation.

3. Operating on Probabilities $\geq 65\%$

Most traders work with a low probability system, and such making money is random. Let us demonstrate this in a simple example, where we draw from a bag of marbles and put them back after the draw, and we calculate the likelihood of winning six or more times with a 55% system (11 winners out of 20) and a 65% system (13 winners out of 20).

65% System	55% System
	

To calculate the expected results after ten draws for winning six or more times, we use the so-called Bernoulli calculator for the probability of each outcome.

Replicating System Performance by Drawing Marbles

Winners	65% System	55% System
6	23.8%	23.8%
7	25.2%	16.6%
8	17.6%	7.6%
9	7.2%	2.1%
10	1.3%	0.3%
Sum	75.1%	50.4%

You see, your rate of expecting more winners than losers with a 55% system is random: 50.4%. When using a 65% system, you have a 75% chance to cash-in more winners than losers.

4. Mechanical Rules

Unfortunately, mechanical rules are not common practice, and most traders guess entry, exit, and stop.

It is critical for defining mechanical rules that are considering statistical volatility or the speed of one price unit, which we call SPU (Speed Unit).

Through this measure, you will determine if you are accepting the risk of a trade or not.

Successful traders do not trade to trade; they trade when conditions are met.

Trading, in particular, day trading requires probability thinking to bend the odds in your favor, and we want to share the basis of operating with the right mindset and tools.

When you day trade, you have multiple challenges to manage:

- Probability of the Setup
- Risk/Reward Relation
- Rules (entry, exit, stop)

We could add more, but we want to focus on the most critical factors and explain:

Probability of Setups

Do you know the probability of the setup you are acting on?

If you are using standard indicators or your likelihood of estimating the future price direction is between 51% and 55%.

Still, such systems have a slightly positive expectation, so why are 76% of the retail traders losing money?

They stay too long in the trade and such exit when prices are already starting to retrace or revert, and such, they cut the winners short and get banked by losing higher amounts than they are winning.

Besides, novice traders guess entries, exits, and stops: Leaving things up for interpretation instead of trading with system-defined mechanical rules and strategies.

When leaving mechanical rules aside and operating with a high probability trading system $\geq 65\%$, you still have no guaranty for making money.

Why is that?

Read on.

Risk/Reward

Two easy definitions upfront:

- $\text{Reward} = \text{Abs}(\text{Entry} - \text{Target})$
- $\text{Risk} = \text{Abs}(\text{Entry} - \text{Stop})$

When we combine Risk/Reward with system probability and the probability of such relations to occur for a \$200 price move, we come to the following overview:

Risk	Reward	Rik to Reward	Probability	Return	Return on Risk	Occurrence	Share of Trade to Take	Stocks, Cash, 3% Return	Stocks, Annual Return, Cash, 3% Return, 5 Days, 200 Days
\$ 350	\$ 200	1.8:1	65%	\$ 8	2%	40%		0.00%	0.1%
\$ 300	\$ 200	1.5:1	65%	\$ 25	8%			0.03%	1.3%
\$ 280	\$ 200	1.4:1	65%	\$ 32	11%			0.05%	2.2%
\$ 260	\$ 200	1.3:1	65%	\$ 39	15%			0.09%	3.5%
\$ 240	\$ 200	1.2:1	65%	\$ 46	19%	50%	83%	0.13%	5.3%
\$ 200	\$ 200	1:1	65%	\$ 60	30%			0.27%	10.8%
\$ 180	\$ 200	0.9:1	65%	\$ 67	37%			0.37%	15.0%
\$ 160	\$ 200	0.8:1	65%	\$ 74	46%	10%	17%	0.51%	20.5%
\$ 100	\$ 200	0.5:1	65%	\$ 95	95%			1.35%	54.2%

You see, even when trading with a high probability system, about 40% of the setups are not suitable for risking your money: because they require you to accept too high risk concerning the reward of your trade.

You need to sort out those trade setups that are not suitable and never accept a risk higher than 1.2:1 (mainly when we are including commission).

In general: Successful traders operate with risk-limiting strategies: This is part of the recipe for trading and investing success.

Calculations for a 55% system shows the following:

Risk	Reward	Rik to Reward	Probability	Return	Return on Risk	Occurrence	Share of Trade to Take	Stocks, Cash, 3% Return	Stocks, Annual Return, Cash, 3% Return, 5 Days, 200 Days	Participation Rate
\$ 350	\$ 200	1.8:1	55%	-\$ 48	-14%	60%		0.03%	1.3%	
\$ 300	\$ 200	1.5:1	55%	-\$ 25	-8%			-0.01%	-0.3%	
\$ 280	\$ 200	1.4:1	55%	-\$ 16	-6%			-0.01%	-0.4%	
\$ 260	\$ 200	1.3:1	55%	-\$ 7	-3%			-0.01%	-0.3%	
\$ 240	\$ 200	1.2:1	55%	\$ 2	1%			0.00%	0.1%	
\$ 200	\$ 200	1:1	55%	\$ 20	10%	25%	63%	0.06%	2.4%	40 of 100
\$ 180	\$ 200	0.9:1	55%	\$ 29	16%			0.11%	4.5%	
\$ 160	\$ 200	0.8:1	55%	\$ 38	24%	15%	37%	0.19%	7.7%	
\$ 100	\$ 200	0.5:1	55%	\$ 65	65%			0.73%	29.3%	

Only four out of ten trades are acceptable, and unfortunately, many traders have the urge to trade the trade, risking too much and by this are part of the 75% losing investors.

Comparing the 65% system to the 55% system shows that the higher probability system allows for a 50% higher participation rate. Let us calculate a short productivity comparison of the two systems at two trades per day at a \$200 price move.

System Probability	2 Trades per Day	Rate of Participation	Annual Trades (200 days)	Duration: 5 Days per Trade	Productivity Difference
65%	\$ 400.00	60%	240	48	50%
55%	\$ 400.00	40%	160	32	

We hope we got our point across. The choice is yours.

In this business, we meet people who win 25% of the time and share their successes. Hobbies are something we sink money in, but when you want to trade for returns, a change of habit and decision making is inevitable.

Entry, Exit, and Stop

For producing income from trading, your system must spell out defined rules for you.

/ES NLT Tick-Based Top-Line Chart, November 19, 2020

We highlighted two confirmed trade situations on the chart and want to share the system rules with you. By recording this on November 20, 2020, we picked the last trading day, days-session only.

The SPU measure was at 4.1 and such in our specification.

NLT Top-Line Trade Rules

Entry Rule	Signal	Trade Target and Stop	Result base on one contract
Situation-1 Buy > \$3,555.3	Blue NLT Power Tower Signal	Target: \$3,562 (max. 10-Candles): Stop: \$3,550 \$275 Risk	Favorable Reward/Risk setup. High probability signal (70%): <ul style="list-style-type: none"> • \$325 return • \$275 risk • 6 candles to target
Situation-2 Sell < \$3,560	Red NLT Power Tower Sell Signal	Target: \$3,554 (max. 10-Candles): Stop: \$3563.75 \$200 Risk	Favorable Reward/Risk setup. High probability signal (70%): <ul style="list-style-type: none"> • \$300 return • \$187.50 risk • 10 candles to target

Our rules are specific but learnable.

We help our clients write a detailed action plan when to trade and when not to, considering the best available times and instruments of favor.

If you are interested in a personal consultation:

Call **+1 866 455 4520** or contact@NeverLossTrading.com

The charts we shared are based on the NeverLossTrading Top-Line program, our flagship offering, and most sold mentorship. Here we work with you for 20 hours, providing:

- Server-installed software
- Real-time data
- Entry, exit, and stop, right on the chart
- Position-sizing models
- Time-in-a-trade per indication
- Risk-handling
- Business Plan (financial plan and action plan)

There are multiple dimensions of value we provide to our clients. Let us formulate in a value-based analysis what such a mentorship, such as NLT Top-Line, can give you:

Value-Based Analysis

NeverLossTrading Mentorship Program Values	Estimated Value
<p>An easy-to-follow investment concept that spells out:</p> <ol style="list-style-type: none"> 1. When to enter and exit a trade. 2. How to leverage and protect your assets. 3. A clear concept to pick securities that are ready to invest in: Stocks, ETF's, Mutual Funds, Commodities, Currencies, Options, Futures. 4. How to make money regardless of the market direction: up, down, sideways. <p>Your goals depend on how much time you can dedicate to trading the financial markets.</p>	<p>Goal: Monthly, Weekly, Daily return of 1% to 5%. Minimum 5% above your prior returns.</p>
You take home: 12 or 15 ready-to-be-used, proprietary NeverLossTrading indicators to trade the market direction by a one-time license fee only.	\$10,000
Twenty hours of personal training and coaching at the rate of \$400/h, with focus on trading/investing system- based in all your accounts: 401(k), IRA, Cash, Margin.	\$,8000
Three months of NLT Alerts and help with trade-finding and execution.	\$3,000
Knowing how to operate a free trading and charting platform based on our proprietary indicators, with top-notch functionality. A free service, comparable to other trading platforms were you would pay \$100 a month.	\$1,200
The best rates for trading stocks, options, futures in the markets because you belong to NeverLossTrading. Making your expensive broker obsolete.	minimum \$1,000
<p>Documented trade summaries to repeatably train skills, setups, situations:</p> <ol style="list-style-type: none"> 1. Tutorials explaining all indicators and setups 2. Clearly formulated trading plan 3. Excel-based trading journal with analysis tool <p>A comprehensive overview not to be found in any book store.</p>	minimum \$1,000

We are more than 10-years in the trading education business, teaching one-on-one at your best available days and times.

Trading our own account day-by-day and helping clients lets us provide long-term experiences and support.

Customer service and tailored mentorships are our virtue.

Basing your trading and investing decisions by defined rules is learnable, and we are here to support you!

We offer a TradersWorld Magazine #79 special for our flagship product:

NeverLossTrading Top-Line

Best suited for the modern trader.

Why did Gann write "The Tunnel thru the Air or looking back from 1940"?

By D.K.Burton

There's a method to why Gann taught a certain way. It's a self screening process for long after he died. If you just give secrets away your system has no value, it's like anything if you start with 100 people there will be only 2 that see it to the end. There's a method and order to understanding Gann's work.

This is the basic order :-

1. First buy all Gann's books and study them by drawing up the commodity charts. First you need accurate date (I have been using CSI for 40 years, discount historical data on my link at www.wdganntrader.com)
2. Draw up monthly data going back 50 years starting the bottom of the chart at zero (this is to draw the geometric angles up later).
3. Gann was also a pattern reading, study all the patterns on charts, Gann calls this form reading.
4. Put all the retracements of 1/8th and 3rds from all major highs to zero, highs to lows and lows to highs.
5. Place all major highs and lows on chart even if you don't have the data. Like cotton high of \$1.89 in 1864 which is in Gann book "How to make profits in commodities". This is a great book, read it 10 times.
6. Gann said this monthly chart is your main trend indicator and this all you need to do, you can trade off the monthly chart as it's the same maths.
7. To get closer, you then draw up a weekly chart and the same rules apply.
8. Do not look at the daily chart as he only used it for the last 90 days of the boom or collapse of a market as it's close to the market.
9. Use the 2 or 3 day swing chart to entry the market only.

The next level is adding TIME cycles and GEOMETRIC angles.

1. Add all his cycles from all major highs and lows, 90,84,60,50,49,45,30,20,15,13,10,9,7,5,3,2 and 1 year cycles. Don't expect them to finish on the exact anniversary date because cycles aren't exactly yearly cycle. Example the 90 year cycle could be a year either side and that's why you use weekly chart and swing chart to enter. Of course a 90-year cycle is more important than a 5 year cycle.
2. Geometric angles are very important, but few draw them up correctly. You need the correct scale for monthly and weekly charts. The angles are drawn from highs to zero and back up again. From lows to zero and back up again.
3. Use only 1 x 1, 2 x 1 and 1 x 2 in the beginning, add the rest as you need them.

The next level is the overlays of 52, 144 and calculator's of square of 9 and circle of 24, 360. This is a lot of study as well.

The last level is the Astronomy, Gann was not using "Regular astrology", they couldn't forecast what happened yesterday. This part is a life time of work and isn't for people who aren't interested in knowledge. Gann had money, so this isn't why he studied horse racing, lottery and markets, it was to understand how it worked, and money was only a by-product of knowledge. If you are just after making money and trading don't use this, as it will takes decades too understand the order and apply it to the markets. If you cant master all of the above then don't start on astronomy.

The level of astronomy that Gann was doing has never been done before as shown in previous articles. After nearly 40 years of full time research I'm still finding coded things in TTTTA. This is some of the current research.

THE TUNNEL THRU THE AIR OR LOOKING BACK FROM 1940

Why did Gann choose 1927 to write the book? To code future cycles into the future. Not only what of I have written in past articles but I'm giving you a bit more here on his coding. You know planets have exaltation degrees and they are :-

Sun 19th degrees Aries
Moon 3rd degree Taurus
Mercury 15th degree Virgo
Venus 27th degree Pisces
Mars 28th degree Capricorn
Jupiter 15th degree Cancer
Saturn 21st degree Libra

On the 9th May 1927 Mercury geocentric was at 3 degrees Taurus, on 9th May 1940 it was there as well (looking back from 1940). On the 24th January 1927 Mercury was at 28th Capricorn when Robert Gordon bought cotton. He bought cotton for Marie Stanton when Venus was opposite 21 degrees Libra; she was a Libran being born on 6th October 1908. He also chooses 1927 because it was 84 years (7 x 12) from 1843. She disappeared when Mars was opposite 28th degree Capricorn at 28th degree Cancer on 5th June 1927 and never came back until the eclipse of 30th August 1932, which also was when Mars was at Jupiter exaltation point of 15th degree Cancer. When she was born Heliocentric Neptune was at 15th degree Cancer, when Robert Gordon was born on 9th June 1906 Geocentric Venus was at 15th Cancer.

Walter Kennelworth first made a trade on 1st February 1927; his cycle is to do with more of the eclipses. The eclipses in the book are 15th June and 29th June. The 14th June is 133 days from 1st February, which is 7 x 19. 19 is the Sun/moon cycle. Gann says if you understand the number "266" you understand the key to some cycles.

Mercury was at 15th degrees Cancer on the 14th June 1927. On the 20th May 1927 he bought wheat and corn when Venus was at Mercury's exaltation point.

I have shown you the 144 overlay many times in previous articles. 33 x 144 is 13 years; 24th January 1927 plus

4,752 days is the 28th January 1940. Looking back from 1940 eclipses that on 1st October 1940 eclipse back to 9th May 1927 is 4894 days, $34 \times 144 = 4896$ days and 34 is the number of the chapter missing in the book. 32 which is twice the number of planes on the cover $\times 153$, the fishes = 4896. 1940 minus 34 years is 1906 when Robert Gordon was born; it is also 19×666 days back to 8th February 1906, which is also an important eclipse cycle. The last date in the book is the 30th August 1932, then end of the eclipse cycle. This date minus 1940 is 9th May 1927. 1940×5 from 30th August 1932 is 8th February 1906 again.

Getting back to the 84-year cycle, it repeats his cotton trades in 2011. It won't repeat every 84 years because the eclipse cycle isn't the same. 1932 there was a major low in June, but in 2016 it was in February and nothing else is the same. This why Gann said you need to find the right starting point. The 2011 cotton trades are near exact as 1927 expect where the reverse small cycle down but the turning point dates were exact. It's a matter of finding the year under which cycle the smaller cycles come from.

There's the other cycles Gann coded in TTTTA, the perihelion and aphelion cycles as well as all the planetary nodes which are written in his own ephemeris in 1946. Like on 9th June 1906 when Robert Gordon was born Mercury was perihelion and 6th October 1908 when Marie Stanton was born Venus was on it node. All this is coded from 1906 through to 1940 dates.

The Gematria of **"THE TUNNEL THRU THE AIR OR LOOKING BACK FROM 1940"** In English Gematria is the number 2592 (25,920 is the precession of the equinoxes or 180×144), the simple Gematria is 432 which is 144×3 . In many past article's I have shown my discovery of the cover of 144 overlaid on the cover of the book.

Gann wrote about giving the average of planets formula on 6th November 1954 when Venus was 2 degrees past 3rd degree of Taurus, and he died on this same degree when Venus was there on 18th June 1955, there is way more knowledge to Gann than all those scammers say what he was and wasn't doing. No one knows exactly what he was doing. The average of planets is like averaging the gravity points around the sun in inverse square law. If you study Gann's ephemeris from Lambert-Gann you can see he's an average of planets at other planetary conjunctions.

Like in August 1947 from a Mars conjunct Uranus he averaged two planets on that date of Saturn/Uranus and Jupiter/Neptune. In November 1948 he's averaging the planets at the solar eclipse. Then on 15th January 1949 when Neptune went retrograde he average 9,6 and 3 planets. Neptune was also retrograde on the 15th January the year before when soybeans topped. There's no one looking at this stuff, so how can they ever say they know what he was doing and how he was using it. He was only doing this research for himself, he knew next to no one would understand this or put in 50 years of study like he did.

Below is monthly soybean chart with planetary lines and average of planets over the prices with the square of 144 overlay (which I had made for myself). Later I will be able to have that overlay printed on my charts.

[illegible]

Below is a spread sheet of highs and lows of wheat back to 1700s with planetary degrees as well as the average of the different planetary cycles to research. Gann had wheat going back to 1259 A.D and cotton going back to 1731. Gann very really traded in a time frame of a week unless all the conditions were right.

[illegible]

FREE TIP.

Believing in the proverb "Impossibility is the logic of fools," I have proved after nine years of scientific investigation that it is possible to know every move the markets make. It is a scientific problem, not guess work, as many believe. I have investigated all "Systems," found most of them worthless to the average trader and none of them perfect. I investigated astrology and kindred sciences to learn the law of the movements in the markets. In them all there was something lacking, and not until I struck upon the law of vibration and attraction as applied in Wireless Telegraphy did I find the key to Wall Street. I find the different stocks grouped into families, each having its own distinct vibration, which acts sympathetically upon others of the group and causes them to move in unison. I now have perfected my theory until I can forecast every move in Stocks, Cotton and Wheat. Remember this is an age of progress and that wireless telegraphy, which was thought impossible by the wise ones, is now practicable. Knowing that there will be those who have little faith I make this fair proposition:—Send your name and address and I will send free one letter with information that will make enough money to pay for one month's subscription, \$18, providing you promise to subscribe if the advice proves good, or I will send you my daily letter one week on receipt of \$3 and will refund your money if not satisfactory. Don't delay. Some big moves soon to start in the markets. OROLO, 120 Liberty st., room 1,208.

As you can see below, Gann was hardly a day trader. He only day traded under certain cycles. You don't need data going back 1000 years if you are a day trader. He was more of a medium term trader as he always said go with the main trend. This also allows more time for study and research.

We reproduce part of an article which appeared in the Buenos Aires Herald, March 21, 1935.

Buenos Aires Herald

Thursday, March 21, 1935

SCIENCE AND STOCK

An Astonishing Claims

Records of 1,000 Years

THE man who guesses and gambles on hope is sure to lose, while the man who follows science makes profits. There is cause and effect for everything and by time element and the cycle theory everything can be mathematically determined.

Mr. W. D. Gann, member of the New Orleans Cotton Exchange and the Rubber Exchange of New York, who stated that he has devoted over 30 years to study of time cycles and spent \$300,000 (U.S.) to develop a dependable method based on mathematical science that will determine the trend of stocks and commodities. The success attending his methods he asserts, are borne out by his own

good fortune on the American markets, and his accuracy in forecasting the futures markets for the past twenty years has been very widely commented upon in the Press in all parts of the United States.

Mr. Gann told a HERALD reporter yesterday that he has carried his records of grain back over 1,000 years and cotton records nearly 400 years. The former he was able to gather the most accurate information about from old British records, while in his search for cotton cycles he visited Egypt and India. More recently he has used his own aeroplane extensively in America for getting round the country quickly to make forecasts on the cotton crops.

1935 STOCK FORECAST:

Gann was studying these things full time for 50 years, might handful doing this in the world. He said he got all of his cycles from the bible. He never revealed his cycles at any price expect the coded book of TTTTA. You can't start where Gann finished; you have to start at the beginning like I have written here. At the end, Gann wasn't doing more research to make money, he said "Money is only a means to an end". Once you have more money than you can spend, you have to have something else to keep your interest, for Gann that was more knowledge. It is really interesting finding new discoveries each year and trying to know what Gann knew.

David has been researching/investing/trading and using Gann's methods since 1983. Has taught himself for nearly 40 years. He continues to dive into decoding Gann's work.

Philosophy

Our program W.D.GannTrader is the first true Gann Software available on the market. There is no other tools used in this program other than Gann's methods. If you don't spend TIME getting the foundation correct you can never learn the higher teachings of the master W.D.Gann.

David Burton

Compounding Profits for Maximum Returns

By Sunny Harris

Introduction

I would expect that most of you reading this article know how to play Blackjack. The game can readily be played betting (trading) one unit at a time. That is, placing the same bet on every play, whether it's \$5 or \$20 or more. One can play with no compounding, or management scheme, and bet the same amount on every hand. I call this Unit Trading (or Fixed Unit), that is, betting the same amount on every bet.

One can also use simple compounding techniques to increase profits by folding the profits back into the betting pile and increasing the bet size each time the equity allows one to trade another unit. So, if you are at a table that has a \$5 minimum bet you can bet one more unit each time your equity exceeds the limit. In the case of equities, let's say the cost of the stock is \$100 per share and you start with \$100, then you can trade 2 shares (or 2 units) when your account size exceeds \$200.

Probably the most common way to maximize profits in the game of Blackjack is to double down on every win. Intuitively it seems that trading more each time you win and backing off with each loss would make more money in the long run. This scheme is called Anti- (or Reverse-) Martingale.

The Martingale strategy is to double the bet size after each loss. This is rather counter-intuitive. Why would I want to bet more after I lose? In fact, this is ultimately a winning scheme if one has infinite wealth since the bet size increases geometrically.

We will also briefly examine the optimal-f strategy proposed by Ralph Vince in Mathematics of Money Management. The theory takes some studying and mathematical prowess, but it is exciting in its potential. I once created a little booklet (signed by Ralph) called Ralph Vince at a Glance, in which I summarized the work and the formulae. I think it is still on my website, www.moneymentor.com.

Lastly, I will present my own money management scheme, which (with Ralph's permission) I call UltimateF because it compensates for Ralph's high risk of ruin.

Data for the Experiment

In this article we will use simulated trading profits to examine several methods of compounding the results to maximize profits and at the same time not realizing financial ruin.

The first few rows of the spreadsheet for this simulated trading profits is in the Figure 1 below.

The pattern repeats ad nauseum for as long as you want to simulate. Of course you can trade 100 contracts/shares or 1 or 10 or any amount you wish, as long as you are consistent and treat your size as a unit.

beginning \$	\$ 10,000.00
\$ 100.00	\$ 10,100.00
\$ (50.00)	\$ 10,050.00
\$ (50.00)	\$ 10,000.00
\$ 100.00	\$ 10,100.00
\$ 100.00	\$ 10,200.00
\$ (50.00)	\$ 10,150.00
\$ 100.00	\$ 10,250.00
\$ (50.00)	\$ 10,200.00

FIGURE 1 Simulated Trading Profits

FIGURE 2 Chart of the Simulated Trading Profits

Without adequate testing and data collection one cannot know which of several compounding methods actually results in the least amount of risk and the greatest amount of profit.

The examples given in this article will demonstrate what I find to be the least risky and yet most profitable of compounding schemes.

Trading One Lot at a Time (Unit Trading)

If you have a profitable strategy (for these examples we'll say 50% profitable with 2:1 ratio wins to losses, which by the way is difficult to achieve) and are trading a single unit at a time, your profits might take a linear progression upward. This would look like the chart in Figure 2 above. In Figure 3, below, I've expanded the data to 80 rows, so you can see more "long-term." As you

can see from the chart, the data sequence keeps repeating.

NB: Keep in mind that compounding only works with a winning system. No amount of compounding can make a losing strategy profitable.

For this example, I have simulated the performance so you can see what a chart of the equity stream looks like. For a system such as this the trades might look like the spreadsheet in Figure 1. In this spreadsheet you can see that with each trade we are risking one unit, that is one share, one lot, one hundred shares, as long as each trade risks the same "unit." For the remainder of the article I will use the full 80 rows of data, but only show exhibits of the beginning and ending rows, rather than printing all 80 rows each time.

Also keep in mind when reading the charts that the scale on the left side varies with each compounding scheme. Unit trading only goes up to \$3,500 while other schemes get to the 10s of thousands.

FIGURE 3 Unit Trading Our Data Over Long-Term

Traders not only need to determine how much to trade with each order, but in real life they also need a plan for what to do with the profits that accumulate. That's as much a part of money management as calculating probability of ruin¹ and determining trade size.

As a profitable day trader, will you want to add the money to your account and trade it as before? Leverage your profits by trading them more aggressively than your core account? Pull money out and put it into long-term investments? Or a combination of the three?

I bring these questions up, not because I am going to answer them in this article, but because they are part of money management and need to be part of your planning.

Compound Interest and Fixed Dollar Trading

Compound interest is a simple concept: Every time you get a return, that return goes into your

account to trade with. You keep earning a return on your returns, which increases your account size some more. (Of course, you will post losses, too.) You keep earning a return on your return, and soon, the numbers get to be large.

If you are trying to live off your trading profits, you will want to take some of the equity out from time to time. When you do, you will have to build back up with less money to do so.

One way to trade the account would be to leave the trading profits in the account and increase the size of your trade each time you had accumulated sufficient profits to increase by one unit. That would be compounding. Let's assume our fictitious stock costs \$200 per share. In this example we will add contracts with every additional \$200 of equity, and back off similarly.

The corresponding spreadsheet exhibiting compounding with the profits follows.

COMPOUNDING every		\$	200.00
Trade Profit		Equity	
nxt trade	beginning	\$	10,000.00
1	100	\$	10,100.00
1	-50	\$	10,050.00
1	100	\$	10,150.00
1	-50	\$	10,100.00
1	-50	\$	10,050.00
1	100	\$	10,150.00
1	-50	\$	10,112.50
1	100	\$	10,168.75
52	100	\$	20,413.15
78	100	\$	25,619.72
59	-50	\$	21,714.79
88	100	\$	27,572.19
66	-50	\$	23,179.14
99	100	\$	29,768.71
74	-50	\$	24,826.53
56	-50	\$	21,119.90
83	100	\$	26,679.85
63	-50	\$	22,509.89
94	100	\$	28,764.83

FIGURE 4 Compounding Spreadsheet

Notice that compounding aggressively assumes that you can or will trade 94 contracts by the end, and that you have sufficient funds in your account to do so. Nevertheless, the effect of simple compounding is dramatic. Also, please notice that as the share size increases the drawdown accelerates, losing \$5,000 - \$9,000 at a time. That amount of drawdown scares even the battle-hardened trader.

FIGURE 5 Compounding Chart

Fixed Dollar Trading on the other hand, requires that you invest the same dollar amount in every trade, regardless of the price of the stock or commodity. For instance, NIO is trading at \$47 per share while GOOG is trading at \$1,730 per share. If you were investing \$10,000 in your account, you would trade 212 shares of NIO or 5 shares of GOOG. As the price of the stock goes up you would trade fewer shares, investing the same \$10,000 with each trade; if the price were to go down, then you would trade more shares with the same \$10,000.

I don't have a spreadsheet for this scenario, as it requires knowing the price action of the stock/commodity a priori versus our previous examples which used profit/loss rather than price.

This is a dollar cost-averaging technique that trades fewer shares as the price goes up and more shares as price goes down.

Martingale Betting Strategy

Martingale is a cost-averaging strategy. It increases your exposure on losing trades. This results in lowering of your average entry price.

Let's say I place a trade with a \$1 stake. On each win, I keep the stake the same at \$1. If I lose, I double my stake amount with each loss. Gamblers call this doubling-down. This is the Martingale strategy.

The idea is that you just go on doubling your trade size until fate eventually gives you one single winning trade. Due to the doubling effect, you can exit with a profit. The immediate disadvantage is that you need a limitless account size to keep adding shares or contracts. As with other strategies, a losing system will not be made better with a compounding scheme. In the examples below you can see that the \$10,000 simulated account expands to \$17,050 with the varying contract size and this money management scheme.

MARTINGALE						+
	Trade Profit				Equity	
this trade	beginning \$		P/L	\$		
					\$ 10,000.00	
1	100	\$	100.00	\$	10,100.00	
1	-50	\$	(50.00)	\$	10,050.00	
2	100	\$	200.00	\$	10,250.00	
1	-50	\$	(50.00)	\$	10,200.00	
2	-50	\$	(100.00)	\$	10,100.00	
4	100	\$	400.00	\$	10,500.00	
1	-50	\$	(50.00)	\$	10,450.00	
2	100	\$	200.00	\$	10,650.00	
1	-50	\$	(50.00)	\$	16,300.00	
2	100	\$	200.00	\$	16,500.00	
1	-50	\$	(50.00)	\$	16,450.00

FIGURE 6 Martingale Strategy Compounding

FIGURE 7 Martingale Equity Chart

Anti-Martingale

Another touted scheme is to double down after every win; this is called the Anti-Martingale or Reverse-Martingale scheme. In this system you would double your trade size each time there is a win and half the bet each time there is a loss. This is the opposite of the Martingale strategy.

ANTI-MARTINGALE				
	Trade Profit			Equity
this trade	beginning \$		P/L	10,000
1	100	\$	100.00	10,100

1	100	\$	100.00	10,050

FIGURE 8 Anti-Martingale Compounding

As you can see from the spreadsheet, this scheme puts on larger trades on losses and fewer contracts on wins. The ultimate result is that this scheme makes even less money than the Unit Trading scheme.

Ralph Vince's optimal-f

Ralph Vince and I go way back. When I first met him, I was a novice trader, more than 35 years ago. His work fascinated me immediately as it was strictly mathematical and gave astonishing results. Ralph clearly outlines his optimal-f theory in his first book, *Mathematics of Money Management*. It is packed with mathematical theory, which makes it a great read for me.

My own Ultimate-F is an outcropping of Vince's work, with the multiplication of trade size being more conservative, and not reaching the ultimate ruin that plagues optimal-f.

Ralph prefers to use the lower case for optimal-f, so I have honored his wishes throughout. Ralph clearly posits that one must have a positive mathematical expectation to (a) have a winning strategy and (b) benefit from any compounding scheme. Here are the calculations:

$$\text{Mathematical Expectation} = (1+A) * P - 1$$

Where: P=Probability of winning

A=Amount you can win/Amount you can lose.

The runs test is essentially a matter of obtaining the Z scores for the win & loss streaks of a system's trades. The Z score is simply the number of standard deviations the data is from the mean of the Normal Probability Distribution.

Here then is how to perform the runs test, how to find a system's Z score:

1. You will need to compile the following data from your run of trades:
 - A. The total number of trades, hereafter-called N.
 - B. The total number winning trades and the total number of losing trades.

Now compute what we will call X. $X = 2 * (\text{Total Number of Wins}) * (\text{Total Number of Losses})$.

- C. The total number of runs in a sequence. We'll call this R.

Let's construct an example to follow along with. Assume the following trades:

-3 +2 +7 -4 +1 -1 +1 +6 -1 0 -2 +1

The net profit is +7. The total number of trades is 12; therefore, $N = 12$. (Note that a trade with a P&L of 0 is regarded as a loss.)

Now we have: - + + - + - + + - - - +

As can be seen there are 6 profits and 6 losses. There are 8 runs in this sequence.

2. Solve for the equation:
$$N * (R-.5) - X$$
3. Solve for the equation:
$$(X * (X-N)) / (N-1)$$
4. Take the square root of the answer in number 3.
5. Divide the answer in number 2 by the answer in number 4. This is the Z score.
6. Now convert the Z score to a confidence limit from the table in the book.

If the Z score is negative, simply convert it to positive when finding your confidence limit. A negative Z score implies positive dependency, meaning fewer streaks than the normal Probability Function would imply, and hence that wins beget wins and losses beget losses. A positive Z score implies negative dependence, meaning more streaks than the Normal Probability Function would imply, and hence that wins beget wins and losses beget losses. A positive Z score implies negative dependence, meaning more streaks than the Normal Probability Function would imply, and hence that wins beget losses and losses beget wins.

Profit Factor

$$PF = (W\% * AW) / (L\% * AL)$$

where: W% = Percentage of winning trades L% = Percentage of losing trades (or $1 - W\%$).
AW = Average winning trade amount.

AL = Average losing trade amount.

The PF can also be expressed as: [If you find dependency] you can alter your behavior accordingly to make better trading decisions, as long as the dependency is at an acceptable confidence limit.

Unless dependency is proven to a very high confidence limit, all attempts to change your trading behavior based on changes in the equity curve are futile and may even be harmful.

Using the previous equity from each trade and increasing the number of contracts/shares with each \$200 increase in equity, the number of contracts/shares grows exponentially to a large number.

optimal-f # Contracts	Vince optimal-f Equity

226	\$ 34,850
170	\$ 51,850

FIGURE 9 optimal-f Compounding

FIGURE 10 optimal-f Equity Chart

Notice in the chart in Figure 10 that the equity increases dramatically and decreases just as dramatically. In several cases the drawdown exceeds \$12,000. Most traders cannot weather the drawdown and stop using this scheme at the worst drawdown. Nevertheless, one can readily see that this compounding scheme yields the highest return for our simulated trades, reaching \$51,850.

Ultimate-F (by Sunny Harris)

As stated earlier, my own Ultimate-F is an outcropping of Vince's work, with the multiplication of trade size being more conservative, and not reaching the ultimate ruin that plagues optimal-f. Rather than increase my trade size based on the accumulated equity, I simply increase trade size based on the unit equity stream and for my own trading I limit the number of contracts to avoid

the risk of ruin.

FIGURE 11 Ultimate-F Compounding

With this scheme the equity does not reach the \$51,850 demonstrated by Ralph Vince's optimal-f, but is still, at \$11,200, respectably higher than the \$3,200 of the Unit Equity. I use my scheme for my own trading as I don't relish large drawdowns.

FIGURE 12 Ultimate-F Equity

Conclusion

I am not trying to present the authoritative work on compounding schemes herein. I am simply sharing with you what I have learned over the last 40 years, and what I have found works for me. To learn more about any of these schemes, turn to online sources.

If you have questions or want to discuss these concepts, don't hesitate to email me at sunny@moneymentor.com, or give me a call at 1-760-908-3070 after market hours.

BEYOND TRADING PSYCHOLOGY

Kenneth Reid, Ph.D.

It's a truism that trading is 90% mental... and I agree.

But "trading psychology," as it is commonly understood and practiced, falls short. In fact, it might be a waste of time.

After 20 years as a trading coach, I finally noticed the obvious: *great traders make the same "stupid mistakes" as struggling traders.* And just about as often.

The New York prop shop ace who can make 6-figures in a day falls into the same psychological quicksand as the novice from New Jersey who is struggling to get back to breakeven after the Covid crash.

Moreover, the prop shop guy feels the same frustration about underperforming as you and I do. We shouldn't be surprised.

Daniel Kahneman won the Nobel Prize for proving that when it comes to money, about 20 different mental errors are hard-coded in our DNA, like reflexes we can't control.

But if we are "wired for financial mediocrity," what accounts for the huge performance differences between individuals trading the same markets, the same stocks, on the very same day?

FOREST OR TREES

Trading psychology, which highlights dozens of these cognitive errors, keeps us focused on these mistakes... the 'Trees.' The good news, I suppose, is that most traders can now describe these errors of judgment quite accurately.

You know the drill: *FOMO, impulsivity, over-reacting to what just happened, the need to be right, adding to losers, selling winners too soon, etc.*

But does this really help us overcome them?

The New Jersey guy (a real client) owned his share on our first call... yet when he was in a live trade he couldn't stop himself from repeating those same mistakes. *Knowledge just wasn't enough.*

He said he felt like a 'different person' when he was in a live trade.

I think we can all relate.

Obviously, the temporary insanity we experience isn't a matter of low IQ, either. Sir Isaac Newton lost \$5 million (in today's dollars) in the 1720 South Sea bubble making the very same "stupid" mistakes.

Nor does it arise from a lack of fancy indicators or technical skills. The prop shop guy (a real client) has very little on his chart and the best trader at his NY firm trades completely naked.

If the issue isn't our psychology, or our IQ or the lack of a technical edge... what do we need to do to get leverage on our bottom-line?

A TALE OF TWO PERSONALITIES

If you spoke with the prop shop trader and the NJ guy, I think you would hear something that profoundly differentiates them... not just by what they say, but how they say it. I would call it 'personality'.

The NJ trader, 44, is Italian with an MBA. He's enthusiastic, creative and very motivated. When he has a good day he's proud; but when he is in a losing trade he will do anything to fix it. When he's losing, he abandons his method and from that moment on, *the end justifies the means*. He will break all his rules to make it back. His Achilles' heel is an untempered inner Warrior.

The prop shop guy is in his early 30's, but sounds older. His speech is calm, measured, mature. He trades the most volatile stocks in the market, but without drama. He's quite selective; he picks his stocks and he picks his spots.

The guy is aggressive (or he wouldn't be among the top traders at his firm), but not excessively so. Personality-wise he seems to be a healthy blend of a Warrior and an Engineer.

PERSONALITY PROFILING

If personality is the Forest that matters more than our psychological Trees, how should we define it? What categories should we use?

In 2011 a psychiatrist, Dr. Jason Williams (Larry Williams' son) profiled some of the best traders in the world using the standard 5-Factor personality test (aka '**OCEAN**').

He was looking for the Holy Grail of trader personality, the key that would unlock the mystery of success for all of us, but Dr. Williams didn't find a set of traits that would account for the outperformance of the group.

Instead, his research proved exactly the opposite; that when it comes to understanding traders,

generalizations aren't helpful... individuality rules.

Another reason Dr. Williams' quest failed may have to do with the nature of the profiling tool he used. It was developed thirty years ago to assist HR departments in corporate hiring.

There's nothing corporate about trading or the trader mentality, so it's not surprising that the OCEAN model doesn't tell us much that's useful.

So who should we ask?

LET'S ASK A TRADER

A few years ago I coached the head trader at one of the futures clearing firms (yes, they have in-house traders) and part of his job is hiring.

When I asked him what he looked for, he said he preferred candidates who never traded before and who have a specific set of personality traits. In a nutshell: *fearless, competitive leaders who can execute plans.*

I think the NY prop shop guy fits this description... but it's not complete.

Top traders are also defined by their unusual *consistency*; their ability to keep losses small over long periods of time. This quote is from the most consistent trader Jack Schwager ever interviewed:

"There are five basic steps to becoming a successful trader. First, focus on trading vehicles, strategies and time horizons that suit your personality."

Gil Blake in New Market Wizards

Blake was perhaps the first great trader to realize just how much personality matters. And he explained why:

"Trading puts pressure on weaker human traits and seems to seek out each individual's Achilles' heel."

How true. Blake then turns it around and emphasizes the importance of blending complementary traits (you could call them sub-personalities) and finding ways for opposites to work together:

"It's important to have a blend between an artistic side and a scientific side. You need the artistic side to imagine, discover, and create trading strategies. You need the scientific side to translate those ideas into firm trading rules and to execute those rules."

STUMBLING IN THE DARK

I wish I had known about Blake's *trait-oriented perspective* back in 2010, when I coached a small group of futures traders. It was my first experience with group coaching.

I didn't know what I was in for...

and I didn't know that I was going to fail.

On the journey down this particular Yellow Brick Road, I lacked awareness of how differently each of us (myself included) approached trading and therefore how different our needs and next steps were.

The fellow from the Midwest was looking for a straightforward method he could use in a repetitive manner for steady income.

In contrast, the young martial artist from the East Coast was already adaptive and confident. He wasn't looking for a new method; he just needed some help with risk controls.

The gal from Alaska wanted a set of objective rules to trade by, because she had the natural discipline to follow them. She was particularly frustrated with me because I was too discretionary, i.e. 'vague.'

In Blake's terminology, I was the creative Artist, whereas she was the Scientist/Engineer who needed help translating insights into protocol.

A few months later, when my "ah ha" moment finally came, I was struck by the irreducible individuality of the members of this group. We were like chess pieces; each one of us represented a distinct Trader Type that functioned according to a specific set of skills and limitations.

BOTTOM LINE

There wasn't much overlap and that helped me define a new 5-Factor model of trader personality and a profiling tool that provides a multi-dimensional "MRI" in about 5 minutes. It's information we can all use to get leverage on the change process and make more efficient adjustments. By the way, because each Type is assigned a strength value, there are 3.4 million possible combinations of one's trader DNA. I mention this not to confuse you... the model is intuitive and very simple to understand and apply.

I just want you to know that you are unique; a unique puzzle and a unique potential. Get to know yourself better. Claim your free **AWARE™** profile here:

Improving Performance and Optimizing systems with Andrews and Babson Techniques

By Ron Jaenisch @ Gmail.com

Andrews and Babson techniques are well known for finding the trend and zeroing in on reversal points, but how do you optimize a mechanical system using the methods?

On the journey to answer this question was myself who would do the research and development and a good friend who lived far away and did the actual historical studies and testing. We performed our tests on futures contracts. Rather than only focus upon the handful of futures that Andrews wrote about in his newsletter we looked at thirty five of the most actively traded. Dr. Andrews always said that larger time frames were best with his tools and we started with daily data and daily patterns for signals. Having a high percentage of winning trades and a small drawdown was important to us which led us to exclude a good number of futures, like Swiss Francs and Bean Meal that had winning trade percentages under 60%.

With what we had left, we felt we had a viable mechanical system but some how felt we needed to do more. With daily data signals we were limited to having under fifty trades a year, and so we went to intraday data and patterns for our signals.

We came up with a system that did well. In the British Pound and Canadian Dollar alone it made nearly \$10,000 in about 18 months. To our surprise, with very little extra effort we were able to increase the percentage of profitable trades by a huge amount and increase the overall gain. These were intraday trades and if one is to look at the daily data one can quickly recognize four different Andrews patterns that he considered important criteria. We put them in column L and performed an alphabetical sort. As a result we were able to put the trades in four categories. "A" were almost amazing, "B" were much better than average, "C" were crummy with over 1/2 losers, and category D were dismal with about 80% losers. As you can see below in column L the AZ and OPSO category were the worst. In column U it showed that the worst categories combined had a net loss of over \$500, while the remaining two categories in column L, resulted in an improvement in performance of over 10%.

I presented this to a friend who has been trading for over 20 years and he responded with: "This is a technique that has worked for me for years. If you decide to put on a trade look at the greater time frame to see if the trade is very likely to succeed. "

"THE COMBINED VIEWS OF THE MASTERS" 2 VOLUME SERIES

Robert Giordano

The 4 parts

Part 1, Master's Non Astro Price/time cycle applications	Book 1
Part 2, Review of Modern Technical Theory	Book 1
Part 3, Mundane/Natural Energy Applications for Time and Price Cycles	Book 2
Part 4, Individual Astro Fingerprint Applications for Time and Price Cycles	Book 2
Author's Cited	
WD Gann, George Bayer, RN Elliot, Edward R Dewey, Alen Andrews, Nikolai Kondratieff, Luther Jensen, Professor Donald Weston, James Mars Langham And others.....!	

Book 1 Applications

Master's Non Astro Price and Time Cycle Applications

General biography of each cited master trader
Monthly and weekly Gann yearly cycles
Time and price range counts
Time and price range divisions
Static cycle research
Composite cycle research
Numerical full, half and quarter square for price and time
Square of 9 angles
Pitchfork
Ellipse research
Gann angles
Square of 9 and Hexagon price and time cycles
A/B price range divisions and expansions
Squaring price and time ranges with and without Gann star
And more.....!

Review of Modern Day Technical Theory

Book 1 feature a general overview of modern day technical analysis applications along with including (in the package) a PDF of many outside of our software technical tool examples with formula.

Technical indicators featured within our Gann Grid Masters 2.0 ;

Moving average, Bollinger Bands, PSAR, Zig Zag, Volume, RSI, ATR, ADX, MACD, Stochastic, Fast Stochastic, William R, Force Donchian Channel, Chalking Money Flow, Rate of Change, Commodity Channel and Index Opening Range Breakout.

Book 2 Applications Mundane "Natural Energy" Theory and Applications

Learn How Too:

- Find dates when planets Ingress into new signs
- Find dates when planets turn retrograde
- Find dates when planets turn direct
- Find dates when direct planet re-crosses retrograde degree
- Find dates when planets aspect planet retrograde degrees
- Find dates when planets aspect eclipse degrees
- Find dates when planet and moon are at max north, south and "0" declination
- Find dates when planets are in full hour right ascension
- Find dates when planets are in parallel latitude
- Find dates when planets move in user set aspects from zero Aries
- Research important mundane planetary synodic cycles
- Find and plot dates of New, Full and Quarter moon cycles

How to Find Any Markets Individual Astro cycles for Price and Time Theory and Applications

Learn How Too:

- How to find planetary fingerprints from major high and lows price and dates
- How to find number square aspects from fingerprint findings
- How to back test all found major planetary fingerprint combinations
- How to find all square planet aspects from itself on all tops and bottom dates
- How to find all planet aspects from itself on all tops and bottom dates
- How to find dates when other planets cross Hot Zodiac degree
- How to research all declination deg from tops and bottom dates

How to research all RA in hours and longitude from tops and bottom dates
 How to find dates when planets aspect mundane and Bayer's mirror points
 How to research all "Hot" zodiac degrees from all major tops and bottom
 How to research all "Hot" fingerprints in non-confirmative aspects
 How to research all aspects to first trade, incorporation and natal planet by deg
 How to research individual planet price conversion (price channels)
 How to research combined mean planet price conversion (price channels)
 How to research individual top and bottom prices converted into zodiac degrees
 How to research first trade planet degrees converted to price
 And more.....!

"Combined Views of The Master's" Package Deal # 1...!

As all who came before will tell, market forecasting may start as a curiosity but will soon become a multiyear or even lifelong obsession. "Don't let this happen to you", you can now learn from my personal time, experience and research spanning over 25 years. The goal of this work is to save our readers countless weeks, months or even years from learning many useless technical dead ends.

Just as I had done for my private students "The Combined Views of the Master's Package" will give an intermediate through advanced theory on many of the master's true forecasting methods. The same method featured within our Gann Grid Master's 2.0 software.

Included within this package;

A full working version of our "New" Gann Grids Master's 2.0 RT Software
 Two volume "Combined Views of The Master Series "
 Multiple hard to find and out of print books and courses for further research
 1 full year subscription to Traders World Online Magazine
 Traders World Online Magazine free books offered by Larry Jacobs
 And 2 full hours of free 1 on 1 live training from myself Robert Giordano the software's developer and book author.

Software and Book Package Pricing\$1500

"Combined Views of the Masters" Package # 2
Private 1 on 1 Training...!

Offering our students the ability to learn directly from the software developer and book author himself. !

Now through the rest of 2020, I Robert Giordano am offering not only the above mentioned package, but am also taking reservations for a very unique special, "18 Full Hours of Live 1 on 1 Private Training". The scope of the lessons will include all the intricate details, functions and features found within our one of a kind 2.0 software's applications, along with extensive insights into my personal discoveries featured within the "Combined Views of the masters" 2 volume series.

Included within the Live Package;

A full working version of our "New" Gann Grids Master's 2.0 RT Software

Two volume "Combined Views of The Master Series "

Multiple hard to find and out of print books and courses for further research

1 full year subscription to Traders World Online Magazine

Traders World Online Magazine free book offers from Larry Jacobs

And 18 full hours of free 1 on 1 live training from myself, the software developer and book author, Robert Giordano

Live Training Package Pricing\$3,750

Gann Grids EOD Software \$499.00

Gann Real Time Software \$799.00

Included with purchase:

Gann Masters PDF

Gann Masters Chart Unveiled PDF

1 Yr Subscription to Traders World

Simple Trading Plan: “Loaded Gun” Review

By Norman Hallett

This is a plan that combines a unique moving average with a simple chart setup to signal high probability trades. It is called “Loaded Gun” because of the shape of the candle setup as well as early price bang that often occurs.

The Entrance Approach

- 1) The approach starts by viewing a basic bar chart and employment of a certain moving average.
- 2) For extra risk-control it is recommended to using a 2, 5, or 10 minute chart. Also other time frames are used such as the 30, 60 and daily.
- 3) Once the moving average is in place then it is recommended to use a particular candle stick trade setup.
- 4) When the completed candle stick formation ends above the moving average then you go long.
- 5) When the completed candle stick formation ends below the moving average then you go short.

Trade Management

- 1) You ride the trade as long as it stays above the moving average.
- 2) A stop should be used for protection at your maximum loss per trade unit. Usually below the entrance formation if you are long or above the formation if you are short.
- 3) As long as you are above the moving average you stay long or below the moving average if you are short. Keep moving your stop for continual protection.
- 4) The RSI is also used with rules to manage the trade.

Mr. Hallett gives continual educational videos via email and through Zoom interaction training. Also Mr. Hallett has The Disciplined Trader Mastery Program where you can dissolve your trading fears and turn your mind into a confident winner that will be reflected in your trading game.

Note: Todd R and others have reported that the trigger in Loaded Gun has become very valuable for option traders who are looking for early signals in run-ups and run-downs.

2 Biggest Trading Mistakes and How To Avoid Them

By Steve Wheeler

Founder and CEO of NaviTrader.com (www.navitrader.com)

Professional Trader and System Designer/Developer

www.navitrader.com

Introduction

Let me start by introducing myself. I am a full time trader, trainer and software developer in the futures markets. I run a real time Live Market Trading/Training Room two hours each trading day. I have traded for over 20 years, and concentrate primarily on the currency (FOREX), crude oil, gold, and stock index futures markets, such as the S & P E-mini. In a previous career, I was a practicing C.P.A. in the state of Florida.

I have developed a full suite of charts and indicators known as the Trendicators™ and a market analyzer known as the TradeFinder™, as well as a number of automated trading systems and automated buy, sell and trade management systems.

What follows are the fundamental elements you need to be consistently profitable in the futures markets. I have also included information below that is crucial to your overall success and in managing your risk.

Preparation for trading profitably consists of market observation over a period of time so that the trader can build confidence in knowing what usually happens in the market and how to profit from the recurring market behavior that repeats itself every day. To take advantage of cycles in the markets, observe the typical move that a market moves after it moves up or down out of a range contraction pattern.

The real objective is to build knowledge of probabilities of market behavior so as to take consistent profits out of specific trading instruments. The following are observations of market behavior that will help to put the probabilities in your favor.

Mistake # 1: Trading Without a System

To put the probabilities in your favor, you must have an objective method or system for your trading. Patterns repeat themselves over and over in all markets, so knowing these patterns can help to put the probabilities in your favor. The more you can automate your trading signals, the more objective you will be in your trade selection.

You need to determine a set of technical conditions for which you would take a long or short position in any market. You can use technical indicators that are widely available, or you can develop your own indicators. Once you have chosen the indicators you want to use, test them for validity in your trading. As in any testing, the more data you test, the more reliable the results will be.

Mistake # 2: Not PROPERLY Balancing Risk vs. Reward

A primary downfall of beginning traders lies in not knowing how to manage risk. The use of protective stop losses (known as stops); is one important tool in trading futures. An even more important tool is known as position sizing. Position sizing answers the question of how many contracts you should trade in the futures markets, and how many shares you should buy or short in the stock market.

We know that trading is all about how to react to your successes as well as trades that don't go your way. No discussion of trading would be complete without a discussion of risk management.

For futures trading, risk management is established with a combination of the use of stop orders combined with position sizing. You need to pair a proven strategy along with risk management. A part of your risk management is in locking in profits and letting your winners run.

Another important benefit of properly managing your risk is how it will help you to manage your stress and fear of trading. When you have too much risk at stake, you will heighten your stress levels and fears while trading. The outcome is usually not a good one because the stress and fear causes you to not trade well as well as make emotional decisions.

You must learn to manage stress and fear to improve your trading. Take a look at the following ways that you can accomplish reducing your trading fears and stress.

Below you will see a NaviTrader chart with our automated trailing stop indicator (red line on a short trade and a green line on a long trade) that allows you to automate your stop management and to lock in profits, which represents a system for trade management.

Design your trades to let your winners run and to seek a ratio of risk to reward ratio of at least 1.1 to 1.5 or greater.

Below is a chart of a trade with the Risk outlined in red and the Reward outlined in green.

Risk Management Guidelines- Crucial To Your Success

The following are risk management guidelines for the micro futures contracts such as the (MES symbol) S & P Futures Micro futures contracts. Adapt these guidelines to fit your trading plan, but do heed the importance of placing daily limits on yourself in terms of loss limits. Always trade with stops in place and be sure that you properly size your positions before you enter any trade. Also avoid trading just prior to or just after major economic news events that will impact your positions, such as Fed announcements, jobs reports, etc. These guidelines represent a conservative approach, because your main objective should be the preservation of capital, before generating profits.

One of the biggest roadblocks to trading success is risk management and properly weighing risk and reward. If you find that you are not able to achieve these objectives, you must adapt your trading plan so that you can meet these guidelines.

How the Micro Futures Could be a Game-changer for Your Trading

If you are new to Futures trading, would just like to build on your strategy without taking on greater risk, have a smaller trading account or would just like to reduce your trading anxiety, take a look at trading the Micro Futures. Many traders find they suffer from “Trading Hesitation” because of fear of losses. The Micro E-mini suite of stock index futures may be able to help you with your trading fears.

The Micros are smaller contracts sizes and therefore provide less risk per trade contract. The Micros are one-tenth the size of the traditional Futures trading contracts. Take a look below at the differences:

Regular Futures	S & P 500 ES	Nasdaq NQ	Russell TF	Dow YM
Point Size	\$50 per point	\$20 per point	\$50 per point	\$5 per point
Micro Futures	S & P MES	Nasdaq 100 MNQ	Russell M2K	Dow MYM
Point Size	\$5 per point	\$2 per point	\$5 per point	\$0.50 per point

While the size and cost of the Micro Futures allow traders with low risk tolerance to more comfortably participate in futures, it is still wise to become educated on trading them as well as on the risk involved.

Using the Micro Futures Accounts such as MES, MNQ, MYM, and M2K to help you balance risk and reward

The micro futures have the benefit of lower risk and you will likely find them easier to trade. Below are some helpful guides for consideration to help you manage your risk.

Suggested guidelines for position sizing and loss limits:

For Each \$1,000 of available margin:

- Maximum position size of 1 contract
- Maximum Daily Loss Limit of \$25
- Weekly Loss Limit of \$50

Risk/Reward Guides for the E-mini (ES), YM, RTY, or NQ Trades

When trading the regular futures contracts, the stakes are higher, so you must carefully balance your risk and reward. Below are some helpful guides for consideration to help you manage your risk when trading the regular futures contracts.

Suggested guidelines for position sizing and loss limits:

For Each \$10,000 of available margin:

- Maximum position size of 1 contract
- Maximum Daily Loss Limit of \$200
- Weekly Loss Limit of \$300

Example For \$50,000 Account

- ✓ Maximum position size of 5 contracts
- ✓ Maximum Daily Loss Limit of \$1,000
- ✓ Maximum Weekly Loss Limit of \$1,500

Below is a recording that you can watch to see how to use Risk Management processes with the Micro Futures:

Link to access the video:

<https://attendee.gotowebinar.com/recording/4852146313599935235>

Click on the above chart/link to watch the trade managed. If your computer has difficulty accessing the video, send an email to support@navitrader.com and we will forward the link to you in an email.

Platform

As you develop your trading skills, I suggest that you use a professional trading platform that will allow you to trade directly from the charts and will allow you to trade in simulation mode as well as to execute trades in your live futures account. As with any skill, the more that you practice, the better you get at it. It is important to develop your skills regarding the proper use of your trading platform while in simulation mode to minimize trading errors after you are trading your actual trading account.

Trading in simulation mode will help you to develop your confidence and an overall methodology that fits your personality.

Developing a Belief in Your Approach and Overcoming Fear

Most traders will develop fear as they trade due to a history of losses. Like any fear, the way to overcome it is to face fear head on, and continue to do what you fear the most. An advantage of having a trading platform that provides for simulation is that you will be able to trade in simulation mode, as in our example above to build a plan with a positive expectancy and thereby develop greater confidence in your approach to trading. As you trade in simulation mode, develop a set of notes that will act as the beginning of your trading plan. Trade in simulation mode until you have mastered the use of the trading platform you have chosen. As you trade in simulation mode, practice developing the discipline needed to execute your trading plan. Through repetition, you will begin to develop into a polished and profitable trader.

Please let us know if you need any help in developing your approach to profitable trading. Send an email to support@navitrader.com to attend our LIVE MARKET ROOM Sessions for FREE! The information within this article as well as all charts shown are for educational purposes only and not a recommendation to buy or sell any futures contract. RISK WARNINGS: Trading stocks, options, futures and foreign exchange carries a high level of risk, and may not be suitable for all investors. Before deciding to trade, you should carefully consider your monetary objectives, level of experience, and risk tolerance. The possibility exists that you could sustain a loss of some or all of your deposited funds and therefore you should not speculate with capital that you cannot afford to lose. You should be aware of all the risks associated with trading and seek advice from an independent advisor if you have any doubts. *HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS, SOME OF WHICH ARE DESCRIBED BELOW. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN. IN FACT, THERE ARE FREQUENTLY SHARP DIFFERENCES BETWEEN HYPOTHETICAL PERFORMANCE RESULTS AND THE ACTUAL RESULTS SUBSEQUENTLY ACHIEVED BY ANY PARTICULAR TRADING PROGRAM. Past returns are not indicative of future results. NaviTrader, Inc. and NaviTrader.com provide programs and services that are for educational purposes and not intended to be a recommendation to buy or sell any futures, foreign exchange, stocks, ETFs and/or options market trades. Past performance does not guarantee or imply any future success.

GOLD TIME & PRICE PREDICTION FOR YEAR 2021

pricetimeresearch.com

By Anup Kumar Agarwal

Hi this is our Gold Time & Price prediction for year 2021 .This research is for educational purpose only. Please read the disclaimer carefully in our website.

Please find attached trend- top-bottom projection line of Gold for year 2021. By looking at this projection line you can know in advance how gold is expected to trend in year 2021, you can also know when gold is expected to make important top and bottom, the exact time window . This graph has nothing to do with price , price projection is separately mentioned below.

This annual forecast is indicating, we will get two great buying opportunity in gold , first in February and another in May. After making low in February and May, gold is expected to see massive rise . After making high in August , gold is expected to see sharp decline . If I look at price analysis, it's indicating gold spot xauusd won't be able to go above \$2272 in entire 2021. This \$2272 should be the exact and final high of year 2021. But I would prefer to book profit in all long position of gold @\$2222. This \$2222 is the unfulfilled upside target of decade 2011-2020 (predicted at beginning of year 2011). \$1758 is the ideal buying for gold spot xauusd and safest entry price for gold spot for entire 2021 is \$1649, if my calculations are not wrong gold spot xauusd won't be able to go below \$1649 in entire 2021 and this \$1649 should be the exact low of gold spot xauusd for year 2021. In any case we will trade with strict stop loss of 1% . This 1% is the maximum stop loss I personally use in trading . To summarise time analysis is indicating June and July are the best months for gold where gold will see excellent rise and February & May are the best months to buy gold, on the other hand price analysis is indicating gold spot will trade between \$1649 - \$2272 in year 2021 and we will get nice buying opportunity in gold spot xauusd @\$1758 and profit booking opportunity @\$2222.

In our annual forecast e-book year 2021 we also provide day wise trend forecast of gold for entire year in advance . We provide 12 graphs for 12 months wherein you will get exact future trend of entire 365 days in advance . This daywise trend forecast research is one of the most preferred & best selling research worldwide for day traders and swing traders

For our calculations we use astrology,geometry,numerology & cycles, all our forecasts are fixed as we strongly believe everything happening in this universe is predecided. Our objective will be fulfilled if viewer of this article are able to make money using our research . The main idea of this research is entering at right time and price with strict tight stop of 1% and holding the position right till the target time and price are achieved .

I hope you find our research useful.For any further details you may reach us at :

S&P 500 E-Mini Futures Professional Trading Course

TESTIMONIALS

"I recently spent 8 hours training one on one with Jeff Kilian. He is by far one of the top Technical Analysts in the world today and clearly showed me how a trader or investor must first become an Expert Market Timer in order to profitably trade stocks, ETF's, mirror funds or futures in real time. Superior analytical and communicative skills combined with being a real-life professional trader, set him apart

from all others. It was a real pleasure to work with him." I recommend this course to traders of all levels.

Larry Jacobs - Trading Champion and Editor of Traders World

"I was in every Module of this course as Jeff Kilian administered it in real time. I was completely blown away at just how much usable material I got out of this Trading Course. Now I know what top professionals are looking at when they trade."

Allan Saito - 5 year Full time Professional Trader

"Who could have ever believed that I would finally get the right information and become a real money making trader."

Pierce Forsythe - Independent Trader

"This Trading Course is so much more than anyone could realize. It must be taken to be believed. A month after I finished it, I moved right into the Executive Mentorship Program."

Diane Harbel - Independent Trader

"What I was given was a complete encyclopedia on proper trade selection, and how to mitigate open risk"

Elizabeth Dominguez - Independent Trader

The market wizards are back!

Unknown Market Wizards continues in the three-decade tradition of the hugely popular Market Wizards series, interviewing exceptionally successful traders to learn how they achieved their extraordinary performance results.

The twist in Unknown Market Wizards is that the featured traders are individuals trading their own accounts. They are unknown to the investment world. Despite their anonymity, these traders have achieved performance records that rival, if not surpass, the best professional managers.

Some of the stories include:

A trader who turned an initial account of \$2,500 into \$50 million.

A trader who achieved an average annual return of 337 percent over a 13-year period.

A trader who made tens of millions using a unique approach that employed neither fundamental nor technical analysis.

A former advertising executive who used classical chart analysis to achieve a 58 percent average annual return over a 27-year trading span.

A promising junior tennis player in the UK who abandoned his quest for a professional sporting career for trading and generated a nine-year track record with an average annual return just under 300 percent.

World-renowned author and trading expert Jack D. Schwager is our guide. His trademark knowledgeable and sensitive interview style encourages the wizards to reveal the fascinating details of their training, experience, tactics, strategies, and their best and worst trades. There are dashes of humor and revelations about the human side of trading throughout.

The result is a engrossing new collection of trading wisdom, brimming with insights that can help all traders improve their outcomes.

How to Day Trade for a Living by Andrew Aziz

This book describes the fundamentals of day trading, explains how day trading is different from other styles of trading and investment, and elaborates on important trading strategies that many traders use every day. The book is short so you can actually finish reading it and not get bored by the middle.

For beginner traders, this book gives you an understanding of where to start, how to start, what to expect from day trading, and how to develop your strategy. Simply reading this book, however, will not make you a profitable trader. Profit in trading does not come with reading a book or two or browsing online. It comes with practice, the right tools and software and appropriate ongoing education.

Intermediate traders may benefit from the book's extensive overview of some of the classic strategies that the majority of retail traders regularly use with proven success. If you think you are beyond the stage of a novice trader, then you may want to jump ahead and start reading from Chapter 7 for an overview of the most important day trading strategies:

Day trading is not gambling or a hobby. You must approach trading very, very seriously. As such, I wake up early, go for a run, take a shower, get dressed, eat breakfast, and fire up my trading station before the markets open in New York. I am awake. I am alert. I am motivated when I sit down and start working on the list of stocks I will watch that day. This morning routine has tremendously helped my mental preparation for coming into the market. Whatever your routine is, starting the morning in a similar fashion will pay invaluable dividends.

ABCD Pattern Trading

Bull Flag Momentum Trading

Top Reversal Trading

Bottom Reversal Trading

Moving Average Trend Trading

VWAP Trading

Support and Resistance Trading

For each strategy, I explain:

How to find the Stock in Play for trade

What indicators I am using on my charts

When I enter the trade

When I exit the trade (profit taking)

What is my stop loss

Day trading is not gambling. It's not an online poker game. To be successful at day trading you need the right tools and you need to be motivated, to work hard, and to persevere. That's How to Day Trade for a Living.

Amazon Kindle Books

Gann Masters Course by Larry Jacobs \$9.95

As you know, W.D. Gann was a legendary trader. Some say he amassed a fortune in the the markets. He wrote several important books on trading as well as a commodity trading course and a stock market trading course. He charged \$3000 to \$5000 for the trading courses which included 6 months of personal instruction by phone. The Gann Masters Trading Course to help traders become successful.

A Unique Approach to Forecasting by Ivan Sargent \$32.95

This book is possibly one of most advanced books in technical analysis you will read regarding price and time reversals. Knowing the Price and time of a stocks reversal point is undeniably an important element for to successful trading. Unlike most trading books which use indicators, oscillators, and basic geometry to forecast the markets outcome; this technique uses a series of lines which when accurately placed can deliver reversal points with amazing accuracy.

Trend lines, retracements lines, channels, fan lines, pivot points etc, all inspect a stock chart from the outside, which is more or less the obvious point of view.

Patterns and Ellipses by Larry Jacobs \$9.99

This book concerns itself with a highly technical subject, the subject of technical analysis of the financial market. This book specifically deals with ellipses and pattern formations used for trading the markets. It also covers many other technical analysis tools that can be used effectively by the trader.

Gann's Master Charts Unveiled by Larry Jacobs \$9.99

We know that Gann used the Pythagorean Square because he was found carrying it with him into the trading pit all the time. This square was hidden in the palm of his hand. How did he use this square? Why did he not discuss the use of this square in his courses? There is only one page covering the Square of Nine in all of his books and courses. Was this square his most valuable tool?

These and all the other squares Gann used will be discussed in detail in this book with many illustns and examples to prove how they work.

Gann Trade Real Time by Larry Jacobs \$9.99

When you opened this book you took the one step that will help you learn how to be successful at the most desirable, but hardest profession in the world. That profession is real time trading. This book is not going to give you an instant secret to day trading. It is going to give you the basics so that you might start the path to understanding how the markets work both short term and long term. You need to know and fully understand the markets and develop successful trading

strategies to become successful at this endeavor.

Best Trading Strategies: Master Trading the Futures, Stocks, ETFs, Forex and Option Markets \$3.99

This is one of the most fascinating books that was ever written about trading because it is written by over thirty expert traders. These traders have many years of experience and they have learned how to turn technical analysis into profits in the markets. This is extremely difficult to do and if you have ever tried to trade the markets with technical analysis you would know what I mean. These writers have some of the best trading strategies they use and have the conviction and the discipline to act assertively and pull the buy or sell trigger regardless of pressures they have against them. They have presented these strategies at the Traders World Online Expo #14 in video presentations and in this book.

What sets these traders apart from other traders? Many think that beating the markets has something to do with discovering and using some secret formula. The traders in this book have the right attitude and many employ a combination of fundamental analysis, technical analysis principles and formulas in their best trading strategies.

Trading is one of the best ways to make a lot of money in the world if one does it right. One needs to find successful trading strategies and implement them in their own trading method. The purpose of this book is to present to you the best trading strategies of these traders so that you might be able to select those that fit you best and then implement them into your own trading.

I wish to express my appreciation to all the writers in this book who made the book possible. They have spent many hours of their time and hard work in writing their section of the book and the putting together their video presentation for the online expo.

Finding Your Trading Method \$3.99

Finding your trading method is the main problem you need to solve if you want to become a successful trader. You may be asking yourself, can I find my own trading method that will reflect my own personality toward trading? For example, do you have the patience to sit in front of a computer and trade all day? Do you prefer to swing trade from 3-5 days or do you like to hold positions for weeks and even months? Every trader is different. You need to find your own trading method.

Finding out your trading method is extremely important to produce a profitable benchmark that can be replicated in your live account. Perhaps the best way to find a successful trading method is to listen to many expert traders to understand what they have done to be successful. The best way to do that is to listen to the Traders World Online Expos presentations. This book duplicates what these experts have said in their presentations,

which explains what they have done to find their own trading method.

If you have a trading method that gives you a predictable profit, then that type of objectivity contributes to your trading edge. The problem with most traders is that being inconsistent will never allow them to have an edge. After you find your trading method that you feel comfortable with, you must have the following:

An overall plan to:

- 1) Set your rule set and plan and then stick with it in all of your trading.
- 2) To give you a trading plan for every day.

The trade plan then should:

- 1) Have an exact entry price
- 2) Have a stop price
- 3) Have a way to add positions
- 4) Tell you where to take profits
- 5) Have a way to protect your profits

By reviewing all the methods given in this book by the expert traders, it will give, you the preliminary steps that you need to find your footing in finding your own trading method.

Reading this book and by seeing the actual recorded presentations on the Traders World Online Expo site can act as a reference tool for selecting your method of trading, investment strategies and tactics.

It took many of these expert traders in this book 15 – 30 years to finally come up and find the answers to find their trading method to make consistent profit. Finding your trading method could be then much easier when you read this book and incorporate the techniques that best fit your personality and style from these traders. This book will enable you to that fastest way to do that.

So if you want help to find your own trading method to be successful in the markets then buy and read this book.

Learn the Secrets of Successful Trading \$3.99

Learn specific trading strategies to improve your trading, learn trading ideas and tactics to be more profitable, better optimize your trading system, find the fatal flaws in your trading, understand and use Elliott Wave to strengthen your trading, position using correct sizing to trade more profitable, understand Mercury cycles in trading the S&P, get consistently profitable trade setups, reduce risk and increase profits using volume, detect and trade the hidden market cycles, short term trading by taking the money and running, develop your mind for trading, overcoming Fear in

Trading, trade with the smart money following volume, understand and use the Ultimate Oscillator, use high power trading with geometry, get better entries, understand the three legs to trading, use technical analysis with NinjaTrader 7, use a breakout system with cycles for greater returns with less risk, use TurnSignal for better entries and exits, trade with an edge, use options profitably, learn to trade online, map supply and demand on charts, quantify and execute portfolio rotation for auto trading.

Written by Many Expert Traders

The book was written by a large group of 35 expert traders, with high qualifications, most of who trade professionally and/or offer trading services and expensive courses to their clients. Some of them charge thousands of dollars per day for personal trading! These expert traders give generally 45-minute presentations covering the same topics given in this book at the Traders World Online Expo #12. By combining their talents in this book, they introduce a new dimension to finding a profitable trading edge in the market. You can use ideas and techniques of this group of experts to leverage your ability to find an edge to successfully trade. Using a group of experts in this manner to insure your trading success is unprecedented.

You'll never find a book like this anywhere! This unique trading book will help you uncover the underlying reasons for your lack of consistency in trading and will help you overcome poor habits that cost you money in trading. It will help you to expose the myths of the market one by one teaching you the right way to trade and to understand the realities of risk and to be comfortable with trading with market. The book is priceless!

Parallels to the Traders World Online Expo 12

Trade the Markets with and Edge \$3.99

This is an important book discussing the use of different strategies methods about trading.

It was written by over 30 expert traders. The book was designed to help you develop your own trading edge in the markets to put you above others who don't have an edge and just trade by the seat of their pants. 90% of traders actually lose in the markets and the main reason is simply that they don't have an edge.

All of the writers in this book are very experienced and knowledgeable of different ways. Each of them has their own expertise in trading the markets. What sets these traders apart from other traders? Many think that beating the markets has something to do with discovering and using some secret formula.

The traders in this book have the right attitude and many employ a combination of fundamental analysis, technical analysis principles and formulas in their best trading strategies. This gives

them a trading edge over other traders. If you want to be successful at trading, you too must have your edge. One needs to find successful trading strategies and implement them in their own trading method.

The purpose of this book is to present to you the best trading strategies of these traders so that you might be able to select those that fit you best and then implement them into your own trading style. I wish to express my appreciation to all the writers in this book who made the book possible. They have spent many hours of their time and hard work in writing their section of the book and the putting together their video presentation for the online expo.

Guide to Successful Online Trading - Secrets from the Pros **\$3.99**

This is one of the finest trading books you'll ever see about trading. The reason is that it comes from a group of expert pro traders with multiple years of experience.

Trading as you know is extremely difficult. It is estimated that 90% of traders lose money in the markets. To help you overcome this statistic, the pro traders in this book give you their ideas on trading with some of the best trading methods ever developed through their long time experience. By reading about these trading methods and implementing them in the markets you will then have a chance to then join the ranks of the 10% of the successful traders.

The traders in this book have through experience the right attitude and employ a combination of technical analysis principles and strategies to be successful. You can develop these also. Trading is one of the best ways to make money. Apply the trading methods in this book and treat it as a business. The purpose of this book is to help you be successful in trading.

From this book you will get all the strategies, Indicators and trading methods that you need to make big profits in the markets.

This book gives you:

- 1) Audio/Visual Links to presentations from pro traders
- 2) The best strategies that the professional traders are using now
- 3) The broad perspective you need in today's difficult markets
- 4) The Exact tools that you need to make profitable trading decisions
- 5) The finest trading education

CRAIG TRADING: Craig Haugaard made 300.9% in his World Cup Trading Championships® Account in 2014 - Want to Know How? \$3.99

This book contains an interview that I made with Craig Haugaard, third-place finisher in the 2014 World Cup Championship of Futures Trading® with a 300.9% net profit. I asked him many questions on exactly how he did it.

In the rest of the book I explain to you how to use the indicators that Craig used to make his 300.9% return.

Here are the indicators that he used:

- Seasonality
- MACD
- Stochastics
- Moving Averages
- Trailing Stops
- Fibonacci Retracements & Extensions

All of the charts in this book are produced using my favorite charting software Market-Analyst®. I have also arranged for you to get a FREE trial so that you might have the chance to actually work with these indicators with a real charting platform.

You will also be able to view the video presentations that I personally created so you can see how these indicators can be setup and followed with clear and concise step-by-step instructions. After you understand how these indicators work, I would then recommend that you go to WorldCupAdvisor.com and consider following Craig Haugaard's real-time trades.

This one-of-a-kind book teaches you how to identify the direction of the markets and trade the markets by using popular trading indicators. This is done by concise instructions backed by learning videos, hands on practice with real trading software and by following real-time trades of a master trader.

Mastering Your Trading: Learn from Expert Trading Advisors "Mastering Your Trading" is the perfect source for learning various methods of trading the market from expert advisers. \$3.99

This book focuses on various methods of trading developed by many top trading advisors. There are 17 well written articles and it is packed by insight that can benefit the beginning to the expert trader. This is a must read. The trading methods and strategies presented in this book can help to succeed

in today's volatile market environment. From preparing your psychology to the demands of timing the market and managing the risk, this book tells it all.

The book provides you the tools that are necessary for making the right trades and when to get in and out of the market. The book covers:

- Price and Volume the only True Indicators
- Uncovering Market Secrets
- How to handle capital exposure
- Secrets of Safe Profitable Day Trading
- Using Social Media Sentiment Cycles
- How to Dramatically Improve Your Trading Psychology
- How to Handle Trading Losses
- Using a Market Scanner to Save Time
- How to Stop Guessing
- How to Get the Right Trading Computer
- Simple and Practical Trading Tips
- And much more...

This book is an enhanced Edition which means that the articles are backed with audio visual presentation links. Most of the presentations are in HD quality and are put together by the writers of the articles in the book and really help the learning process.

Successful trading is based on knowledge and having the right psychology to trade the markets. This book will lift your trading to a much higher level and will save you an enormous amount to time.

Trading with Success \$4.99

This book contains an interview in Chapter 1 with Rob Mitchell, who finished in 2nd place in the 2014 World Cup Championship® of CME E-mini Trading with a 57% net profit.

Rob Mitchell is the president of Axiom Research & Trading, Inc. and has been a trading system developer for over 20 years and has developed a number of commercially successful trading systems. He has at various times been the largest eMini S&P trader in the world. Rob has also acted as a Commodity Trading Adviser, has traded for hedge funds and has won the Robbins World Cup eMini trading championship in the past. Rob is a trading teacher and mentor and is the founder and head trader of Oil

Trading Room which is devoted to providing advanced educational resources to traders at all levels.

In the rest of the book I will explain to you some of the trading ideas of Rob that he uses in both his Oil Trading Room and in his World Cup Advisor Account. You can then actually see and understand how some of his ideas work.

I am not going to tell you exactly how Rob used the ideas to make his return of 57% on a \$10,000 investment. That information is not public and belongs only to Rob.

I will tell you some of the trading ideas he uses and help you understand how these ideas work. I would then recommend that you go to World Cup Advisor and consider following Rob's trades. You will be able to automatically mirror Rob's trades in your own brokerage account with World Cup Leader-Follower AutoTrade™ service. You will also be able to see what his trades look like on your own charts and better understand why he made the trades.

Takumaru Forex Trading \$4.99

This book contains an interview in Chapter 1 with Takumaru Sakakibara, who finished in 2nd place in the 2014 World Cup Championship of Forex Trading® with a 122.6% net profit. "Takumaru's largest drawdown (cumulative peak-to-valley percentage decline in month-end net equity during the life of the account) was -21.5% from 6-30-15 to 10-31-15."

"Please remember that past performance is not necessarily indicative of future results."

"Please remember that Forex trading involves substantial risk of loss, and past performance is not necessarily indicative of future results."

In the rest of the book I will explain to you some of the trading ideas Takumaru said he used in

the championship. You can then actually see and understand how his ideas work.

I am not going to tell you exactly how Takumaru used the ideas to make his return of 122.6% on a \$10,000 investment. That information is not public and belongs only to Takumaru.

I will tell you which indicators he used and help you understand how these indicators work.

Michael Trading: Learn about some of the trading tools he used \$4.99

Michael Cook, was the first-place finisher in the 2014 WORLD CUP Championship of Futures Trading® with a 366% net profit. In this book there is a detailed interview with Michael with questions and answers of exactly what he used to win the championship. In this book I will explain to you the indicators that he said he used in the interview. You can then actually see and understand how they work. Here are some the indicators and methods that he said he used: 1) Moving Averages 2) Seasonality 3) Cycles 4) Seasonality 5) Price Patterns 6) William's %R 7) Long with Stops 8) Commitment of Traders Report You will also be able to download a video presentation that I personally created so you can see how these indicators can be setup and followed in a step-by-step manner. After you understand how these indicators work, I would then recommend that you go to WorldCupAdvisor.com and consider following Michael Cook's trades.
